

Pentagram

The Clarity Phone Design Initiative

Trevor Van Norman
Robert Brunner
Sang Hung

Dec 6 2006

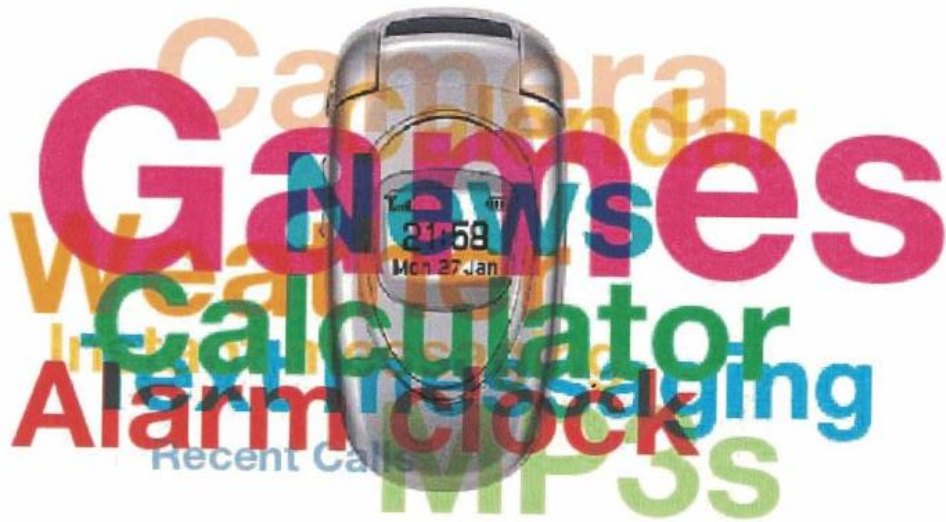

Introduction

Sprint/Nextel and Pentagram Design have collaborated in the development of industrial and user interface design concepts for a **simplified** mobile phone concept geared for mainstream users.

Originally envisioned as a phone for wireless customers uncomfortable with technology, the idea has grown to become an opportunity to define a broader platform with strong appeal across multiple customer segments.

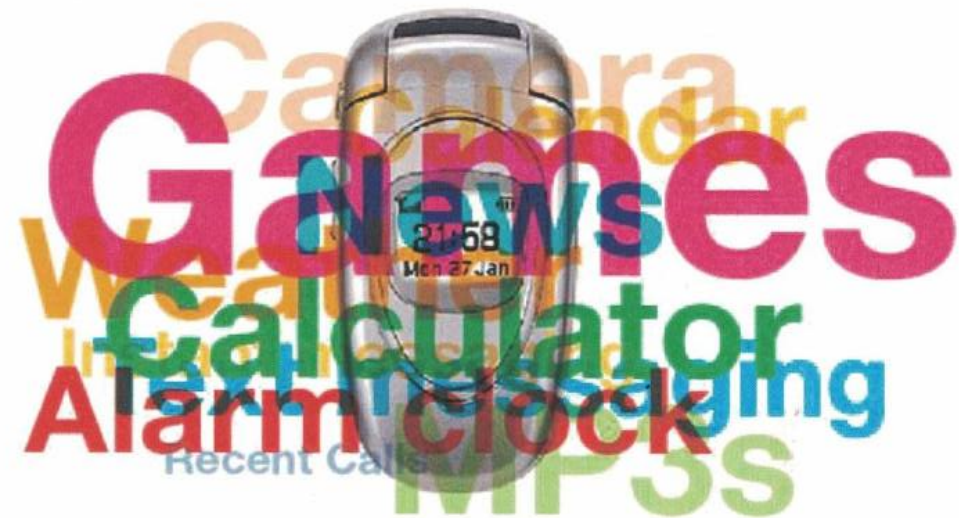

Our efforts have created a proposal for a product line and the potential definition of a new sub-brand. The following slides summarize our work to date and the opportunity going forward.

Why a Simple Phone?

There are hundreds of choices today for consumers when purchasing a cell phone. New features, looks, and configurations are created every day.

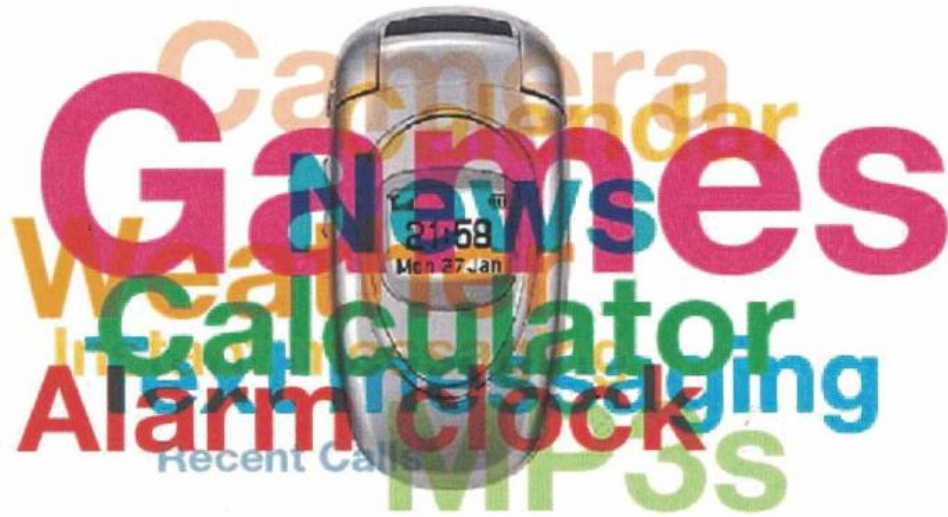

Why a Simple Phone?

There are hundreds of choices today for consumers when purchasing a cell phone. New features, looks, and configurations are created every day.

So why design a new line of simple phones, especially ones that have been purposefully designed to have less bells and whistles?

Why a Simple Phone?

There are hundreds of choices today for consumers when purchasing a cell phone. New features, looks, and configurations are created every day.

So why design a new line of simple phones, especially ones that have been purposefully designed to have less bells and whistles?

Because people are ready for it.

Basic Phone Anecdotes

Chicago Tribune, 12/1/06

Verizon Wireless is introducing a phone this week with a unique feature: It only makes calls. The Motorola W315 cannot surf the Web, play music or even take a picture...

According to a Jupiter report released this summer, only 6 percent of Verizon customers said they have surfed the Web on their phone, 7 percent of Sprint customers have purchased music and 4 percent of Cingular customers have downloaded games.

NY Times, David Pogue, 9/28/06

"Dear Mr. Pogue: You've reviewed cell phones that play music, record video, receive TV channels and do e-mail. But here's a radical idea: What about cell phones that make phone calls?"

PCMAG.com, Sascha Segan, 11/27/06

Editor Rating: 4 stars out of 5

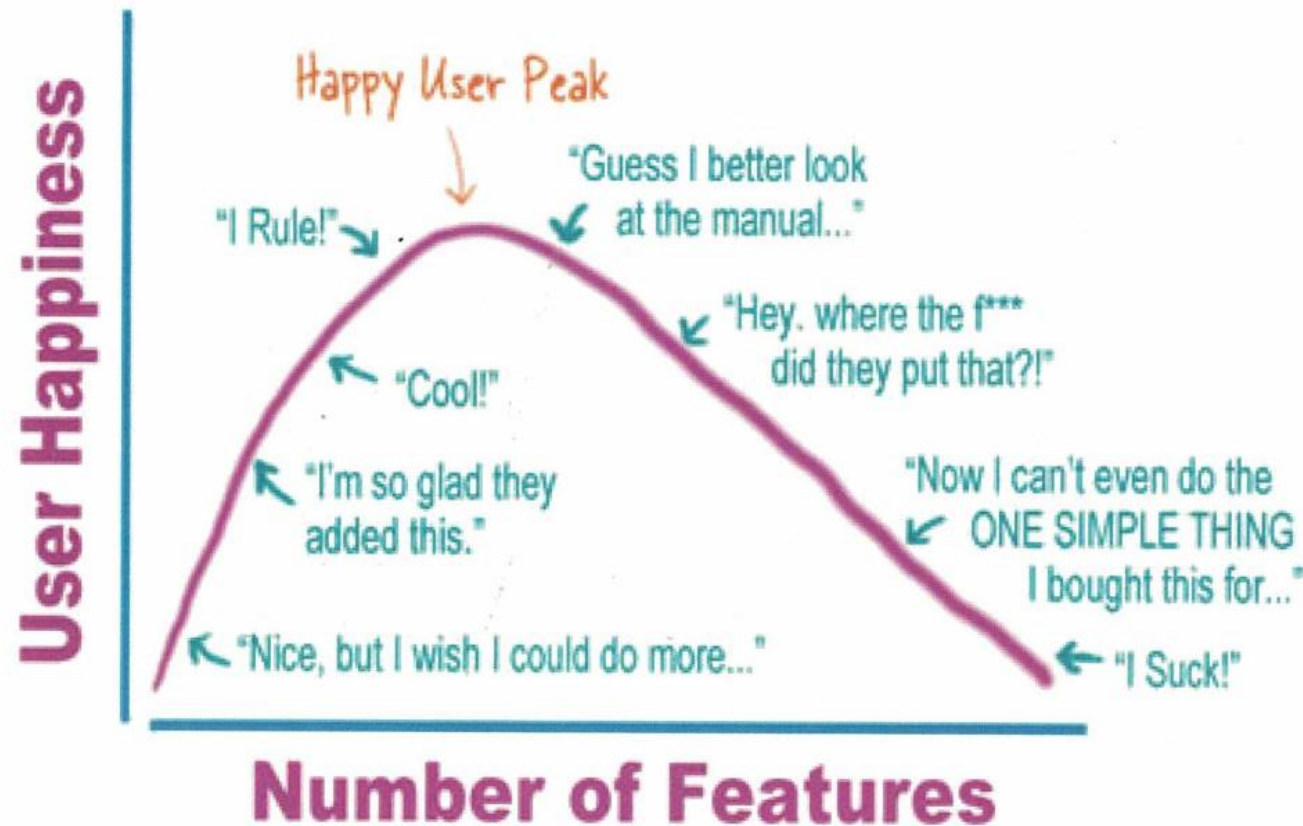

After getting my hands on the two Jitterbug phones from GreatCall, I couldn't help asking myself, why don't more phones work like this?

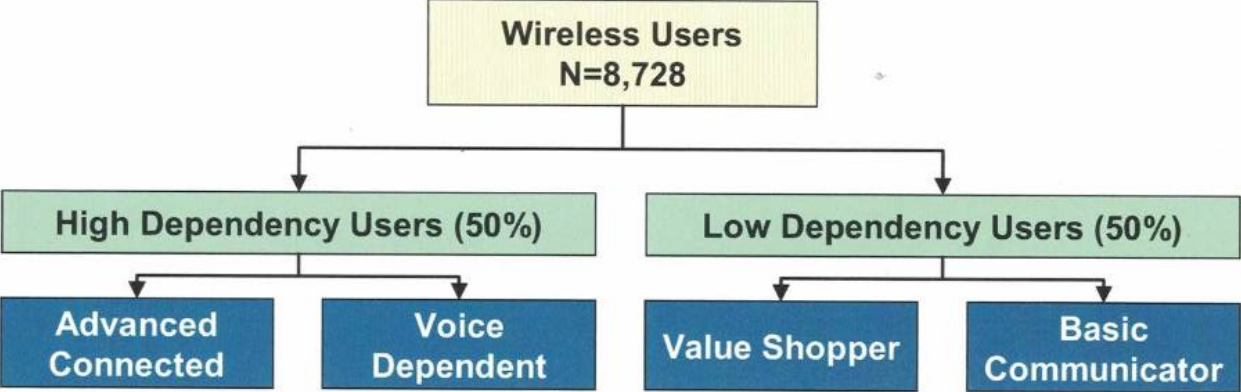

“Featuritis” becoming the Norm

Over burdened phones have become standard, and “featuritis” has become a common malady:

The Featuritis Curve

Sprint 3.0 Segmentation Structure

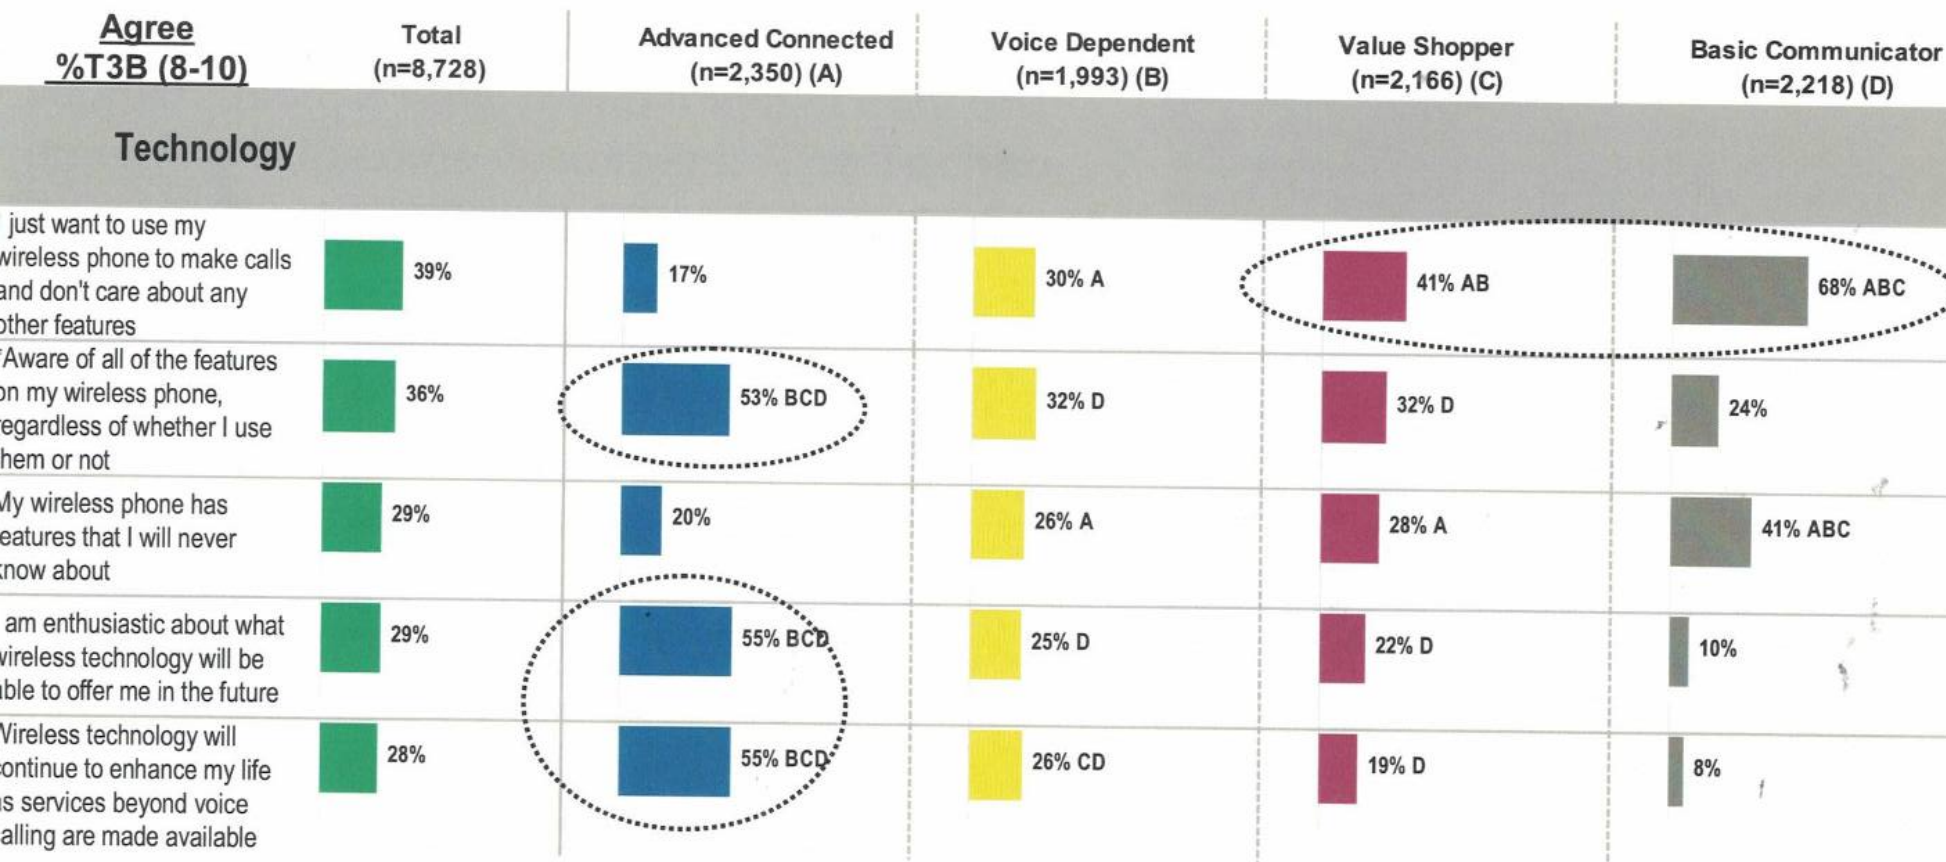

Key Beliefs

- | | Advanced Connected | Voice Dependent | Value Shopper | Basic Communicator |
|--|--|--|---|--|
| | <ul style="list-style-type: none">• Heavily dependent for both personal and business• Active shoppers; are highly engaged and seek the best deal on plans <u>and</u> phones• Very strong interest and usage of advanced features | <ul style="list-style-type: none">• Heavily “voice” dependent for both personal and business• Not interested in actively shopping for phone/plans• Average interest in advanced features | <ul style="list-style-type: none">• Not particularly dependent on their wireless phone• Actively shop around for cheaper service plans• Low interest in advanced features | <ul style="list-style-type: none">• Only use wireless phone for basic needs (ie safety)• Lowest engagement in shopping and buying process but don’t want to spend much• Very low interest in advanced features |

% of Category Population	27%	23%	25%	25%
% of Category Revenue ¹	32%	25%	24%	18%

A Growing Mindset: The Techno Impatient

In addition to the defined Sprint customer segmentation, a new, broad mindset may be emerging with some customers: **The Techno Impatient.**

As technology invades nearly all corners of life, a growing resistance to its overhead is appearing. People are less willing to invest in learning new products, as the expectation is that we should not have to educate ourselves extensively to do basic, everyday tasks. This ever increasing overhead of consumer electronics is creating customer impatience with technology.

Many people simply want a good solution to meet their communication needs, not added complexity or work. This growing number of people can cut across many segments, including those comfortable with technology.

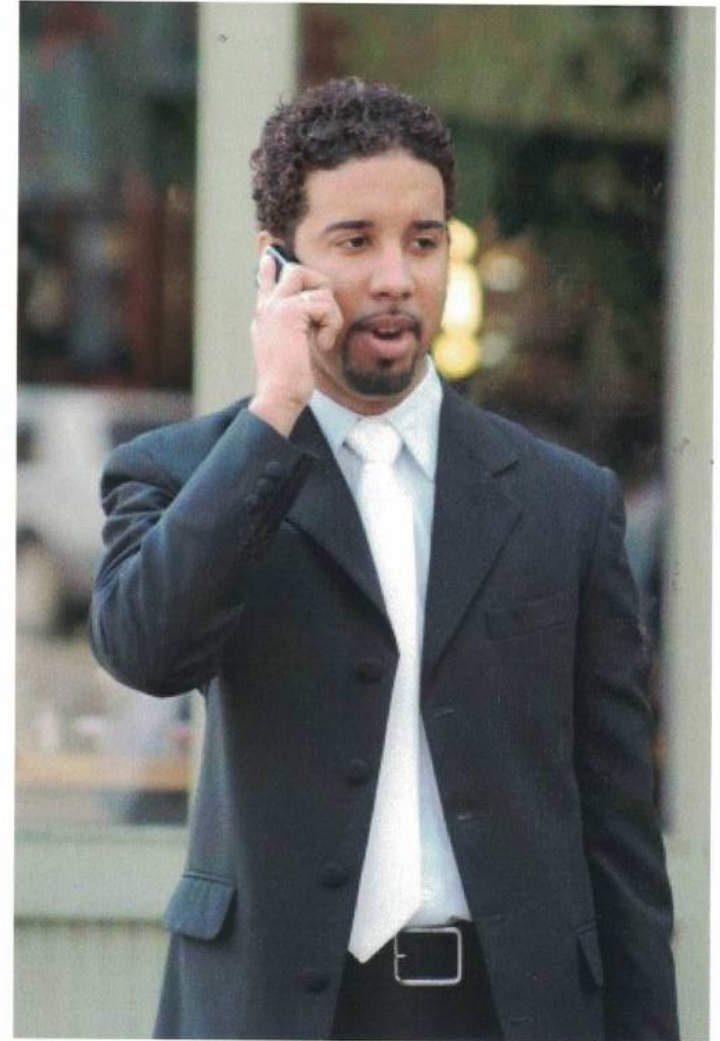

Real-World Usage Patterns Example

Log analysis of the actual everyday usage of 100 smartphones (Nokia 6600) used by MIT Media Lab and Sloan Business School students (Eagle and Pentland 2006)

- + 350,000 hours over 9 months
- + 80% of usage: phone application.
- + Remaining 20% - Alarm Clock and photo application are popular.
- + Music player and web browsing have a low priority.

Observation: People, even high tech users, mostly need basic communication technology with added convenience features. This finding corroborates with the findings in Sprint Segmentation Study 3.0

Note: these are the non-intrusive log analysis of actual application usage of highly techno-advanced users.

The Power of You: Beyond Needs-based Approach

There are a growing class of users that want basic simple wireless communication that is easy to use and understand, works well, and is affordable. Not “dumbed down” products that lack style. Just good, smart design that meets their communication needs.

Consequently, to be truly successful, the design of a simplified phone must first be grounded in users’ needs, manifest or latent.

The opportunity lies in addressing these needs with intelligent product design that is **not only useful, but desirable** as well.

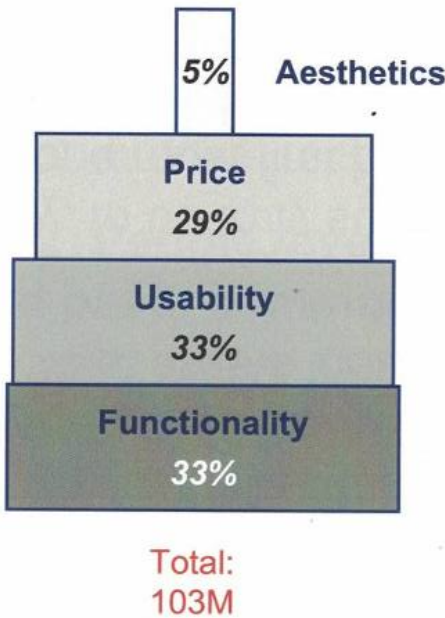

Consumers' Emphasis on Usable Mobile Devices

Customers place a high importance on usability and functionality as it relates to their needs:

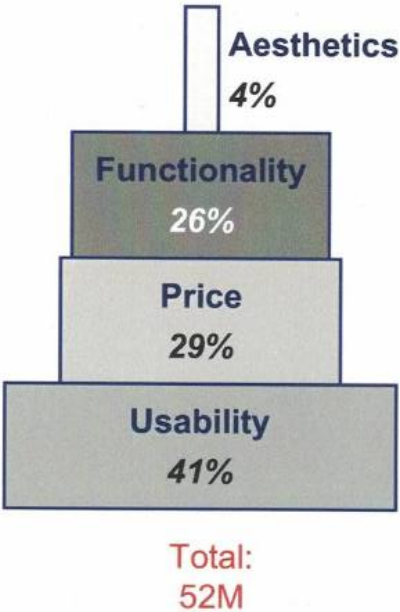

Wireless Consumers

Functionality, usability and price are tablestakes with aesthetics being possible differentiator

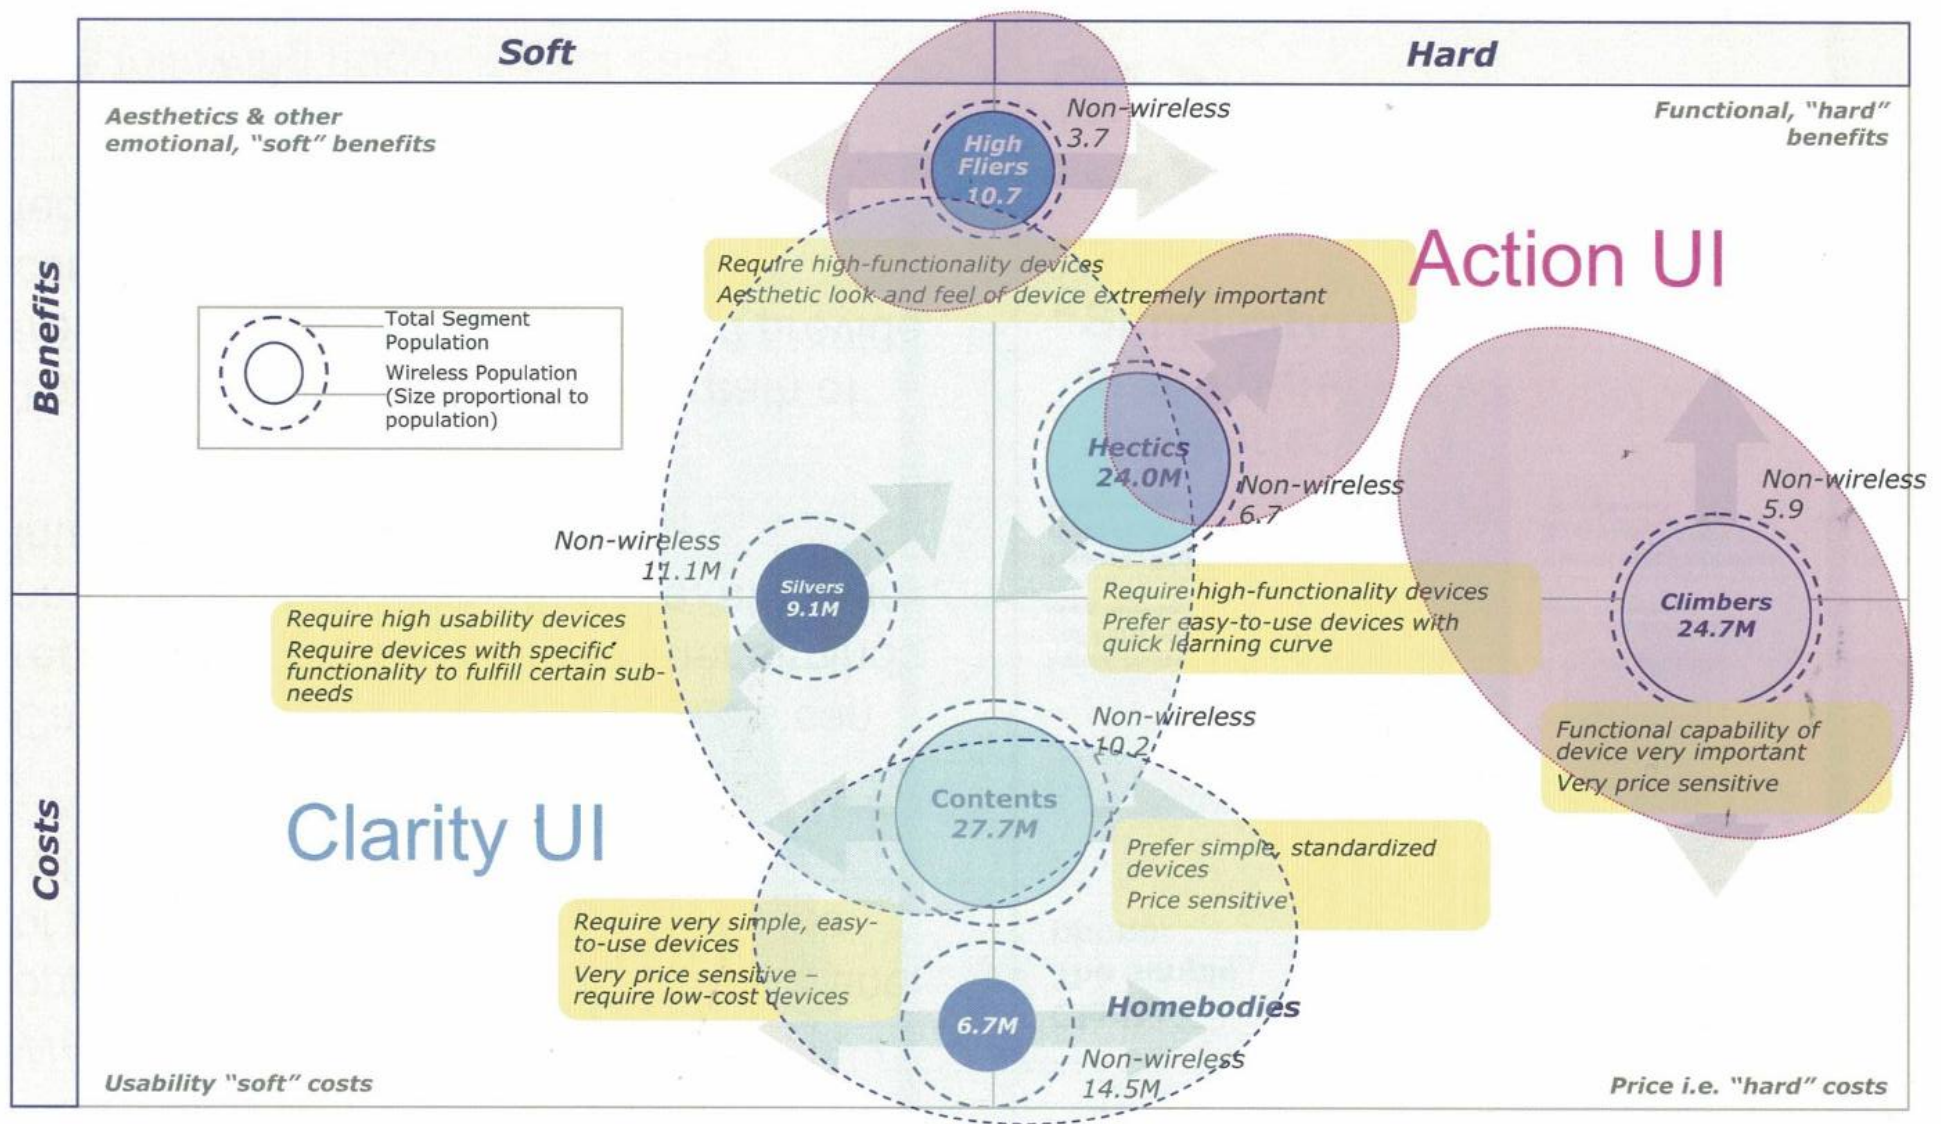

Non-Wireless Consumers

Key emphasis on usability followed by price

Mercator Partners: Device Strategy Development (2006) Note: Initial preference sizing shown based on current level of data available

End-user segments have different trade-off preferences

Mapping of Action UI and Clarity UI represent own analysis.

Creating a New Brand - Clarity

We have come to believe that an opportunity exists to create a new brand of phones that may strongly resonate with consumers.

Called Clarity, this line of products can represent simplicity in consumer's minds and come to equate with ease, efficiency, intelligence and good design.

The brand can be seen as a breath of fresh air in a complex world, and provide commentary and counterpoint to technology gone out of control.

The following pages depict early representations of how this brand might appear:

The Clarity Brand - Advertising

**"Everything should
be made as simple
as possible, but
not simpler."**

Albert Einstein

Clarity.
The simple phone.

**"Simplicity
is the ultimate
sophistication."**

Leonardo DaVinci

The Clarity Brand - Advertising

Clarity. Making life simpler.

The Clarity Brand - Packaging

The Clarity Brand - Point of Purchase

The Clarity Brand - Retail

Summary Findings

There is demand for a simplified line of mobile phones.

The Simple Phone may have appeal beyond Basic Communicators. Simple products are not, and should not be exclusively for the technically challenged.

Simple does not equal simplistic. A simple product should not appear geriatric, generic, toy like, or less capable. It should simply be a well designed tool for voice communication.

Simple can be elegant and sophisticated, and should be able to be tuned to varying tastes and aspirations. A simple phone can be cool, stylish, functional, or fun in any combination.

Simplicity can be built upon to define a powerful new brand.

Clarity Phone Design Initiative

To further explore the idea of a Clarity branded line of simplified phones, a new design strategy for development of these phones has been created. This strategy covers features, aesthetics and interface.

The strategy is based on the following ideas:

Usability, Simplicity and Elegance

Leadership in Holistic Integrative Design

Useful Innovations for Everyday Needs

Sprint Brand Invigoration and Equity Building

Design Driven by Simplicity

Visually, simplicity refers to a pure, basic aesthetic, pleasing in nature, with a reduced set of form and detail elements. It's appearance is **inviting and clean, and a pleasure to hold.**

Functionally, simplicity has connotations of being **easy to understand, streamlined, and thoughtful.** A product that is simple to operate requires little instruction, does its intended task or tasks well, is appropriately robust, and has little that is not necessary.

The goal of the Clarity design strategy is to fully embody simplicity into all aspects of a phone's design, creating products that are not only easy to use, but exciting and rewarding as well. Clarity phones should not only make communication easy, but enrich it as well.

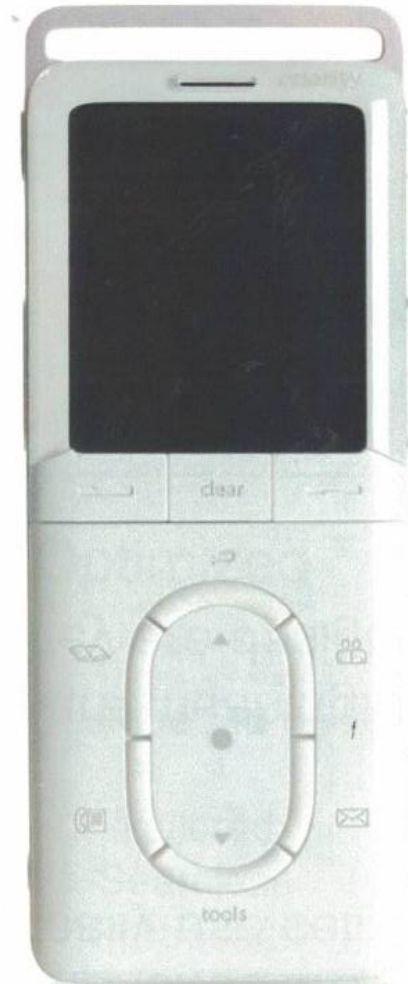

Clarity Phone Design – Form & Function Synergy

Clarity Phone concepts represent the synergy between form and function. Designed from the ground up based upon user needs, the family of concepts seek to **optimize mobile voice communication** and a small focused set of data applications for wireless and non-wireless consumers.

Unique device form factor design, feature differentiation, user interface paradigm and interaction models are driven by different user segment needs. Form and function are designed holistically and interwoven in the design process.

Product/service features, user interface paradigms and device designs should be driven by user segment needs, usability appropriate to the user segments, cost of technology and prospective revenue opportunities.

Introducing the Clarity Design Language

The Clarity mobile phone language will bring simple, well executed mobile functionality to a line of design based cell phones. Clarity phones are first and foremost about calls, and are tuned to how people really use cell phones in their every day lives.

Clarity design extends to a set of focused functions that are meaningful and useful to life. They are designed for human USE. They are designed for LIFE. They are cool, stylish, and functional.

Clarity Phone Concept Exploration

Basic Clarity
Phone

Modal Flip

Music Biased
Phone

High Capability

Expanded
Multimedia

Clarity Language - Functionality

Calling as Primary Purpose - Pull most utilized, core phone functions out of the menu with direct keys, creating obvious and helpful one to one hard button access for users.

Clarity Language - Functionality

Reduced Density of Functions - Avoid overwhelming presentation of button options through smart button groupings and appearance. Lessened emphasis on keypad – more on calling tools.

Clarity Language - Functionality

Controlled Exposure to Extras - Allow users to selectively use functions on an as needed/wanted basis. Exploration and introduction of new functions should happen at the user's discretion. Minimize feature depth and choices.

Clarity Language - Functionality

Visual Sense of Location - Provide a means for users to understand where they are in the options and what else is available. Bread crumbs to indicate where you are.

Clarity Language - Form and Details

Use basic forms based on pure geometry - Simple, reduction of complexity, yet interesting to see and hold.

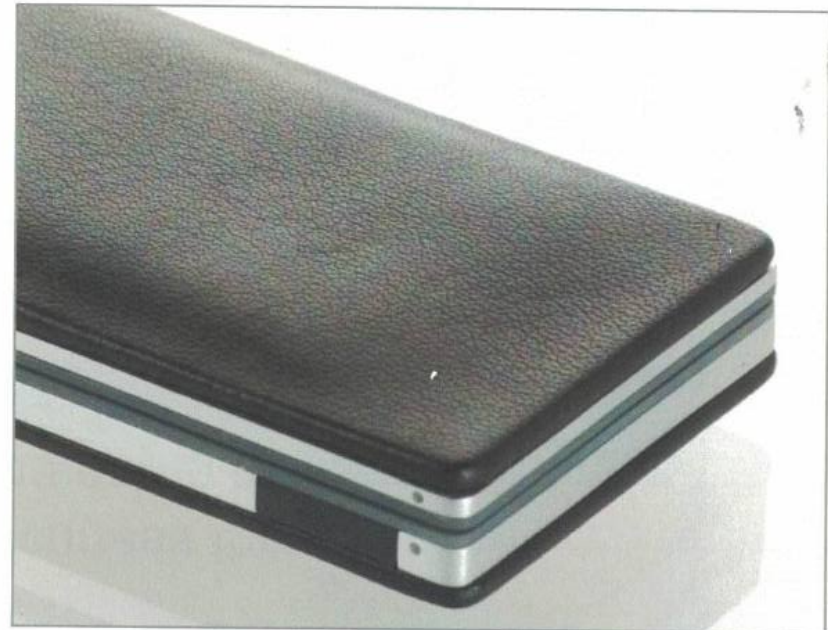

Clarity Language - Form and Details

Refined, intriguing detail - Interactive areas softened with expressive surfaces.

Clarity Language - Form and Details

Communicate a feeling of authenticity - convey quality and inspire confidence through honest use of materials: Soft rubber, real metal, leathers as protective surfaces or in tactile areas to create a personal connection with the device.

Clarity Language - Form and Details

Show that simple is refined - provide richness through choice of finishes and contrasting materials, provide depth through layering of transparency, textures, and elements.

Clarity User Interface - Design Philosophy

Eliminate infrequently used options.

Minimize attention resource in mobile environment.

Design should allow users focused on primary tasks, rather than motivated by cross promotion and exposure of different services and products.

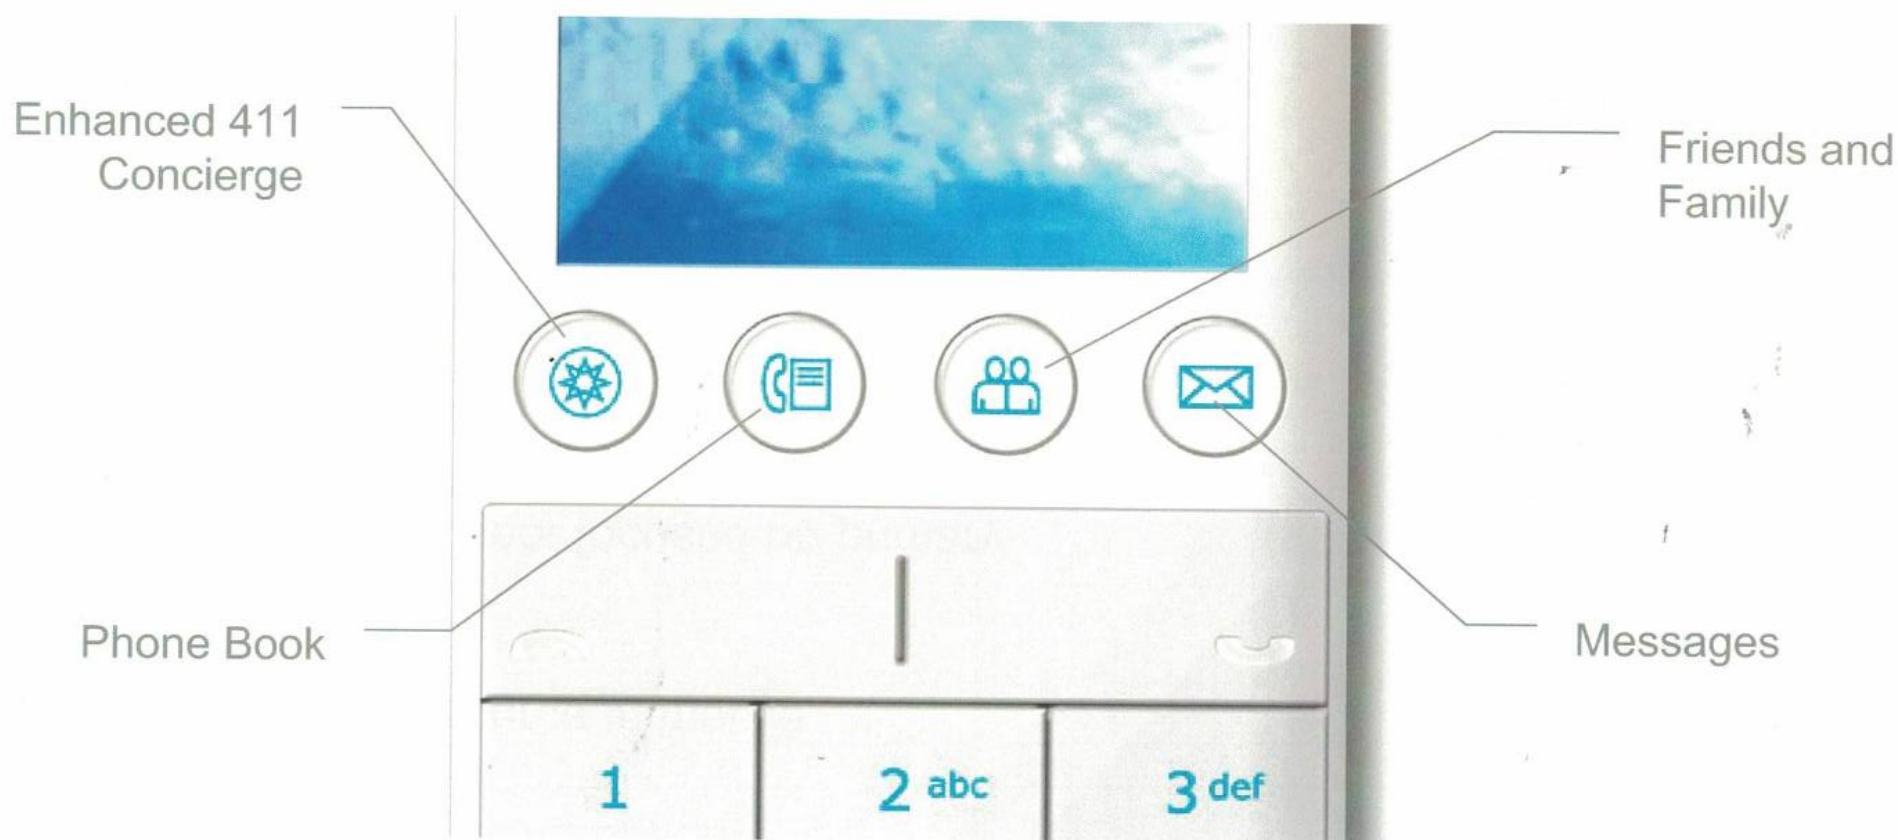

Use multi-tasking only in moderation and when necessary.

Appliance-centric user interface with switching/swapping of different appliance context enabled by modal hardware design.

Clarity User Interface - Emphasis

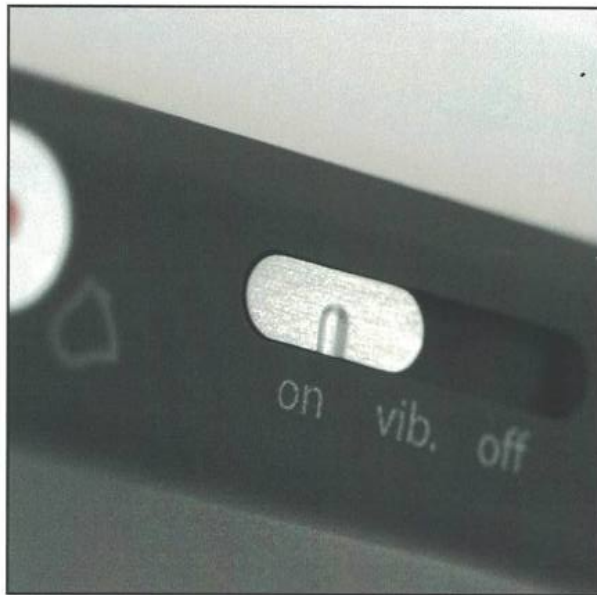

Basic Premise: Staying true to the basic job that the device is accomplishing, i.e Mobile Communication. The basic mobile functionality should consider these features and integrate them into a single **intuitive, holistic operation**.

Modes supporting basic communication needs.

Clarity User Interface - Frequent use items in Hardware

Alarm Set Button

Ringer Off,
Vibrate, and On
Switch

Clarity User Interface - Modality

Appliance Mode Dial
(Phone, Camera,
Review, Tools, Music,
GPS Concierge)

Key features are mapped directly to the modal dial hardware. Appliance user experience is enabled by market-proven ergonomics and user interface design.

Dedicated Key for
Address Book and
Community

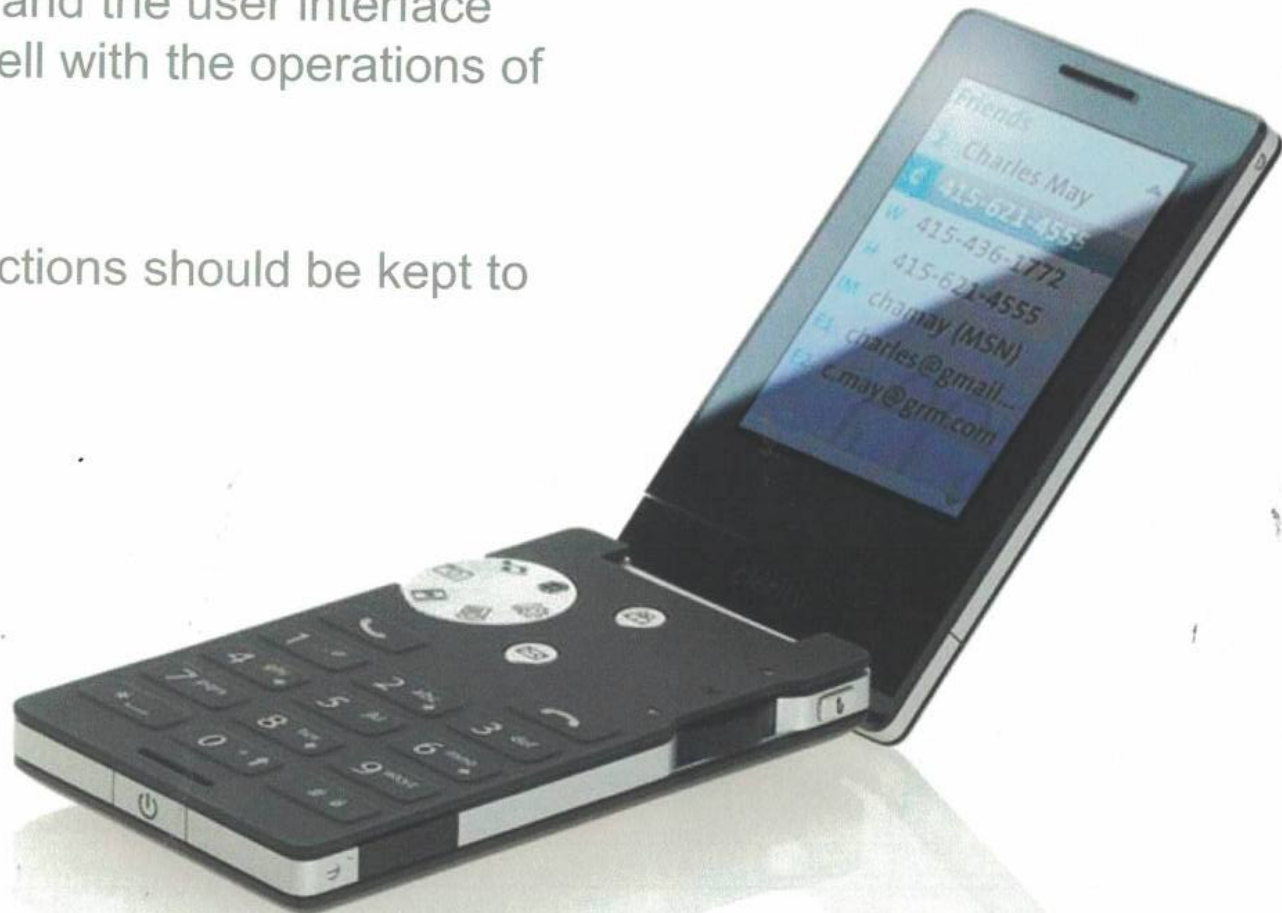

Jog Dial for easy and
efficient navigation

Dedicated Key for
Messaging

Clarity User Interface - Targeted Applications

Each target application is designed to function as a dedicated appliance. The physical ergonomics, industrial and the user interface design should mesh well with the operations of the appliance.

Cross appliance interactions should be kept to a non-distractive level.

Clarity User Interface - Appliance User Interface Design

The Modal Dial disambiguates different appliance mode and enables users to keep track of the focused applications.

The Appliance-centric design approach reduces the layering of menus and obscure navigation and application flow that plague many of the multi-functional mobile phones in the market.

Sprint Strategy Map: Clarity Design, Focused Applications

Strategy Map		
Simplicity: Clarity Design Initiative is driven by <u>U</u>sability, <u>S</u>implicity and <u>E</u>legance based on user needs (multiple sources of research). Innovation: Visual Communication, Clarity Designs and Multimodal technology are imbued with useful innovations from Sprint (estimate of more than 20 patents pending or granted). Differentiation: Design synergy between form and function, modal appliance, Sprint-owned innovations designed for USE.		
Initiative	Needs	Services & Features
Clarity Design: Iconic Visual Communication & GPS phone	User + Image quality #1 area for improvement. + GPS will be in high demand from consumers. + Need for speedy upload and send experience. Business + 7.1m users with \$500m revenue (95% service margin). + Lower churn, high-value customers (cf. to Vision). + Sprint leadership and strategic advantages.	Visual Communication + 3Mp+ sensor, image stabilization, auto-upload & share. + Natural extensions to multimodal search, communities, blogs etc. (patent-pending "Send-to framework") Motion & Multimodal Technology + Useful innovations for image stabilization, mobile health, GPS for consumers, not to add complexities.
Clarity Design: Iconic Musical Health Phone	User + Many Americans do not lead healthy lives. + Over 100 million Americans have chronic diseases. + Mobility is key to counteract lifestyle chronic conditions. + Escalating health cost needs self-care solutions. Business + Potential huge ROI, prospect and growth of the service. + Sprint leadership and strategic advantages in mobile health. + Social responsibility promoting healthy lifestyle.	Mobile Health, Music & Camera + Always-on Pedometer to track steps with health service + Leverage Sprint Music and Picture Mail Service to create a compelling Mobile Health Service. + Foundation for future health monitoring and total health solution. Motion & Multimodal Technology + Useful innovations for image stabilization, mobile health, motion-based games, GPS and UI for devices designed to <i>simplify</i> life for users.
Clarity Design: Basic 411 Concierge Phone	User + Accessibility, Convenience and Safety Business + address "Basic Communicators", "Voice Dependents", and "Value Shopper" needs and gap in portfolio. + Social responsibility / Legal requirements supporting Accessibility. + boost ARPU from "Basic Communicators" through \$500m revenue (70-80% margin) enhanced 411 Concierge Service.	Focus on Mobile Communication + Direct mapping of hardware to basic voice features. + Section 255 Accessibility Requirements. + Enhanced 411 Concierge Service. Multimodal Technology + Automatic speech recognition and TTS for accessibility & safety.

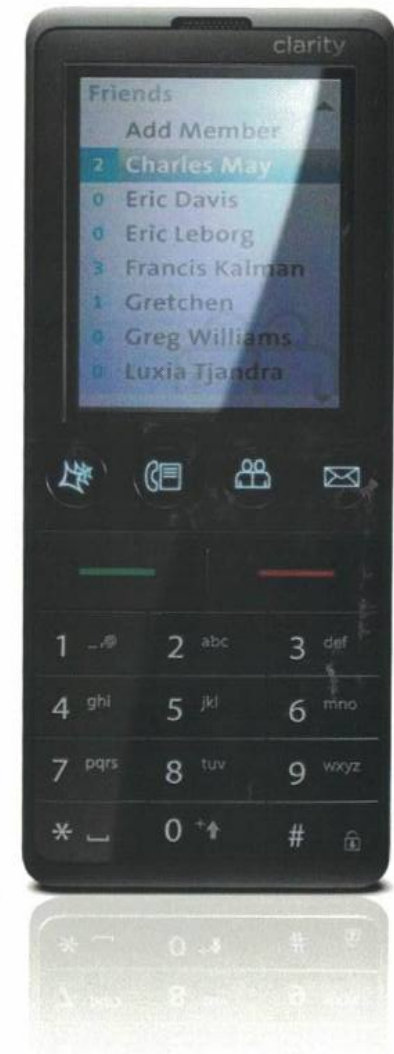

Business Needs : 411 Concierge Service Example

E411 is close to a \$500M business today
E411 is profitable – 70%-80% Margin

Basic Communicators and Value
Shoppers understand and use E411

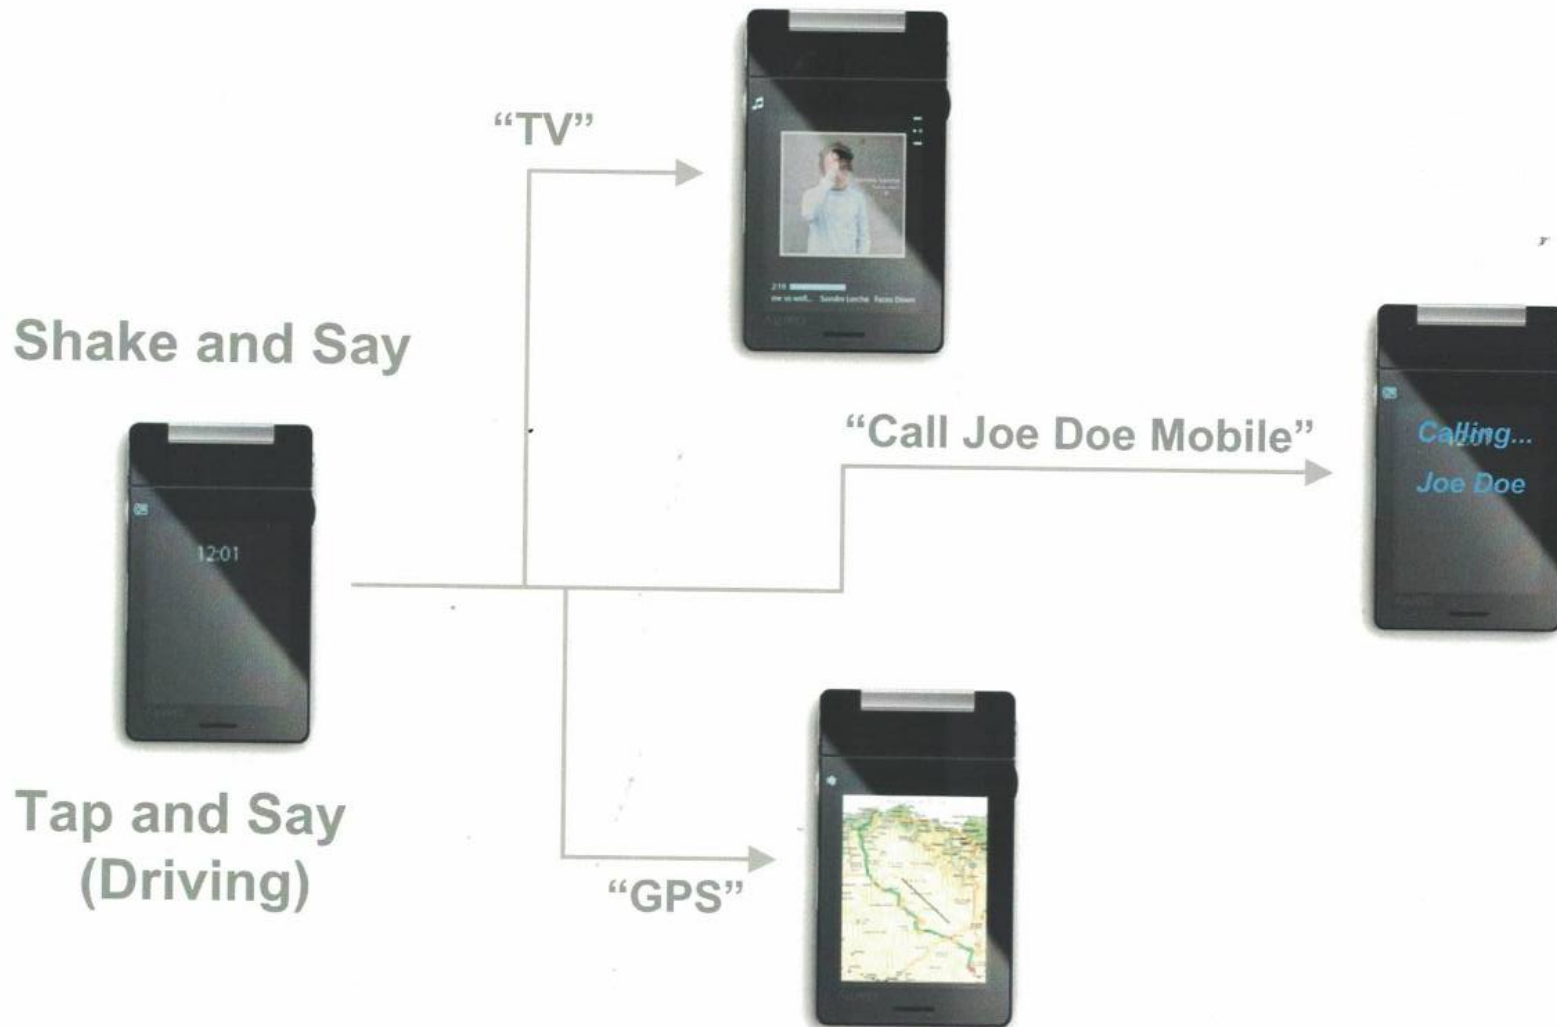

E411 is more than information

- Location based search for driving directions
- Movie listings/times, weather, sports, shopping
- Spanish Language Operators
- Back end messaging
- SMS

Design Driven by Useful Innovations: Shake and Say

Multimodal User Interface (Automatic Motion and Speech Recognition) with unparalleled simplicity for core tasks without opening the flip or pressing a key.

Design Driven by Useful Innovations: Anti Blur Picture

3.2Mp sensor with auto -
focus and image stabilization

I³: Immersive, Intelligent, Intuitive

Clarity Concept Phone: a Day in Life

With Sprint enhanced GPS Service, you can go anywhere without getting lost. You can even discover some good restaurants in your travel! Featuring a dedicated mode dial, you can switch easily between phone, GPS, camera or your music player (or radio station). It is voice-enabled and motion-enabled for your safety and convenience. It also features image stabilization and you can take good pictures with clarity all the time even when you are moving!

Produced by Sprint UXD Prototyping Team and Sprint Channels and Creative Media.

Proposed Clarity Product Line

Clarity Basic

Clarity Basic is a simple bar phone that showcases the 4 key functions of the dedicated buttons. On the side of the device is a jog dial control with OK, along with Back buttons. The form is very simple, yet the contrast of surface and material creates a rich aesthetic.

The emphasis is on selecting a mode, then scrolling to a choice and executing.

Clarity Basic Features

Features

1. Voice Calls
2. Jog Dial Navigation
3. Large LCD display with large fonts
4. Family & Friends Group
5. Enhanced 411 Concierge Service
6. Accessibility features: Automatic Speech Recognition and Text-to-Speech
7. Speaker Phone
8. Direct Access Buttons to Phone Book, Messaging, Concierge Service
9. Tools: Alarm Clock, Web

Clarity Iconic Musical Health-Steps Phone

Clarity Iconic Health-Music Phone is a small, compact phone with a highly simple look and operation. A trackpad control for up/down and select is surrounded by a cluster of mode buttons including the main features and music control. The emphasis is on the modal features and a pure, compact form.

Sliding the control cluster down reveals the keypad.

The phone is designed with the synergy of form and function as a prospective iconic device for Music and Mobile Health.

Clarity Musical Health-Steps Phone Features

Features

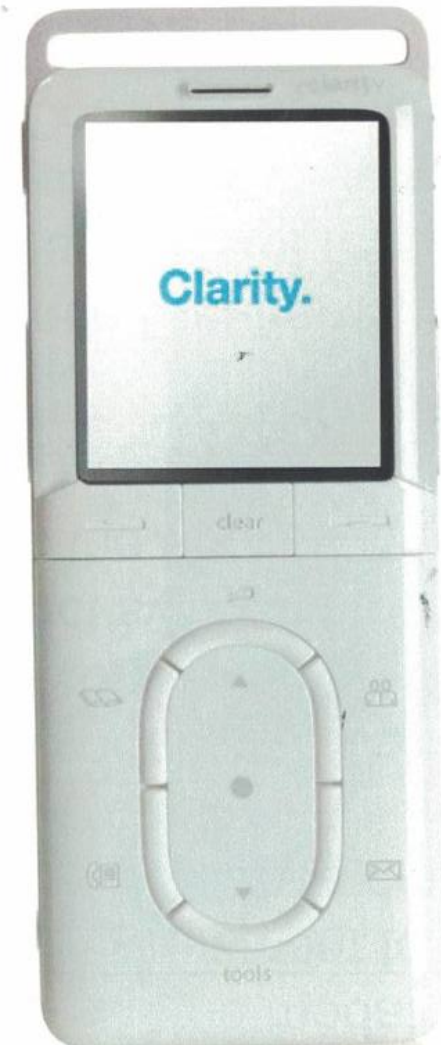

1. Voice Calls
2. Trackpad Navigation Control
3. Power Vision (EV-DO rev. 0) for quick download
4. Family & Friend Group
5. Sprint Music Player and Store
6. Step Counter & Mobile Health
7. Shake/Say and Tap/Say Multimodal User Interface
8. 1.3Mp Camera with image stabilization
9. Auto-Upload of pictures
10. Bluetooth
11. Speaker Phone
12. Tools: Alarm Clock, Calendar, Motion-based games

Clarity Musical Health-Steps Phone Features

Features

1. Voice Calls
2. Trackpad Navigation Control
3. Power Vision (EV-DO rev. 0) for quick download

7. Shake/Say and Tap/Say Multimodal User Interface
8. 1.3Mp Camera with image stabilization
9. Auto-Upload of pictures
10. Bluetooth
11. Speaker Phone
12. Tools: Alarm Clock, Calendar, Motion-based games

Clarity Iconic Visual Communication Phone

Model Flip/Twist takes the modality idea and brings a new element to mobile phones - the appliance dial control. Operating much like a camera, different modes are reached by moving the dial to the selected feature. The product switches to the desired mode with the application running.

The Modal Appliance Dial Family is designed with the synergy of form and function as a prospective iconic device for Visual Communication and GPS Navigation Services.

Clarity Iconic Visual Communication Phone

Features

1. Voice Calls
2. EV-DO Rev. A for faster upload
3. Swivel 2.2-inch LCD
4. 3.2 Mp camera with auto-focus
5. Auto-Upload of pictures

Camera

Summary

A strong market opportunity exists for a line of Sprint branded simple phones.

The simple phone idea appeals to under tapped Sprint segments such as Basic Communicators, the Value-Shoppers and Voice Dependents.

The simplified design could have broader appeal across segments due to technology/feature backlash and a desire for straightforward, useful and usable solutions.

The Clarity brand has strong potential for market impact.

The product design and brand should be intelligent and elegant, not “dumbed down”.

The Clarity UI is based upon a focus on communication applications and streamlining often used functions and focused applications customers need.

The Clarity design language can be extended into a line of phones. Product proposals include basic phone, music phone, and modal flip/twist phone.

Clarity Phones: Simplicity-driven Design

Thank You !

Life is too complicated... your mobile phone doesn't have to be.

Clarity.
