Research Insights

Fast Facts & Recommendations

- Packaging is an important part of the overall purchasing experience as it can enhance or diminish the perception of overall quality after the product is purchased. 9 out of 14 participants believed the quality of packaging will have a direct impact on their purchasing experience of smartphones.
- Based on the result of the Satisfaction Rate and Ranking (Vibrant, iphone4 and G2 packaging scored significantly higher than others), the participants were more attracted towards:
 1. Packaging that are thick and structurally solid.
 2. Iconic graphic elements that can be associated with the products.
 3. Compact shape and size with minimal materials.
- Packaging must represent and synchronize with the overall product image. It can be simple but it needs to have its own personality.

Introduction

Synopsis of Research Methodology

The goal of this research is to investigate the nature of premium product attributes (total N=14) in a 3-part study. The third part of the research on premium packaging was included in this report:

1. Premium Product Association— Respondents constructed their premium product (or service, objects, experience).
2. Perceptual Map – Similarity rating of 9 devices was obtained for construction of perceptual maps and underlying dimensions.
3. **Packaging Attribute Ratings (design, material, structure, color, shape, size, reusability, and overall value) & Preference (this report).**

Packaging Attributes

Evaluations of 9 different packaging
boxes for mobile smartphones

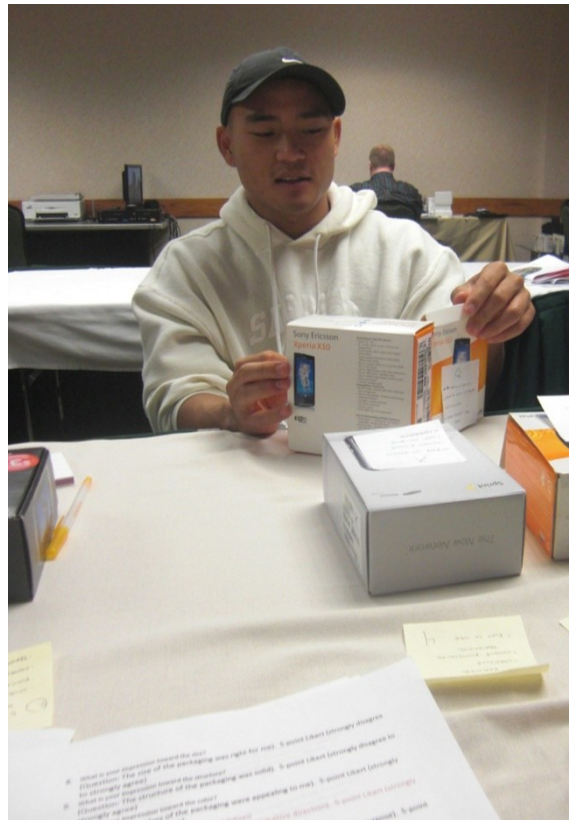

Ranking of packaging (premium quality)

Objective and Methodology

Premium Packaging Experience Evaluation

- The objective of the study was to compare premium-packaging experience of smartphones from smartphone owners.
- The participants evaluated different packaging of smartphones from various vendors/carriers based on the design, material, structure, color, shape, size, reusability, and overall value.
- Total of 9 packaging boxes were used for comparison:
 - ❖ P: Samsung Vibrant (T-Mobile)
 - ❖ Q: Sony Ericsson Xperia X10 (AT&T)
 - ❖ R: Motorola Cliq (T-Mobile)
 - ❖ S: Garmin Nuvifone (AT&T)
 - ❖ T: BlackBerry Torch (AT&T)
 - ❖ U: Motorola Droid X (Verizon)
 - ❖ V: iPhone 4 (AT&T)
 - ❖ W: Google G2 (T-Mobile)
 - ❖ X: Samsung Moment (Sprint)
- Each participant (n=14) wrote down their first impressions for each packaging, elements that attracted their attention, and elements that made them question its quality.
- The participants rated each packaging for different attributes.
- At the end, the participants ranked all 9 packaging from the most premium to the least premium.

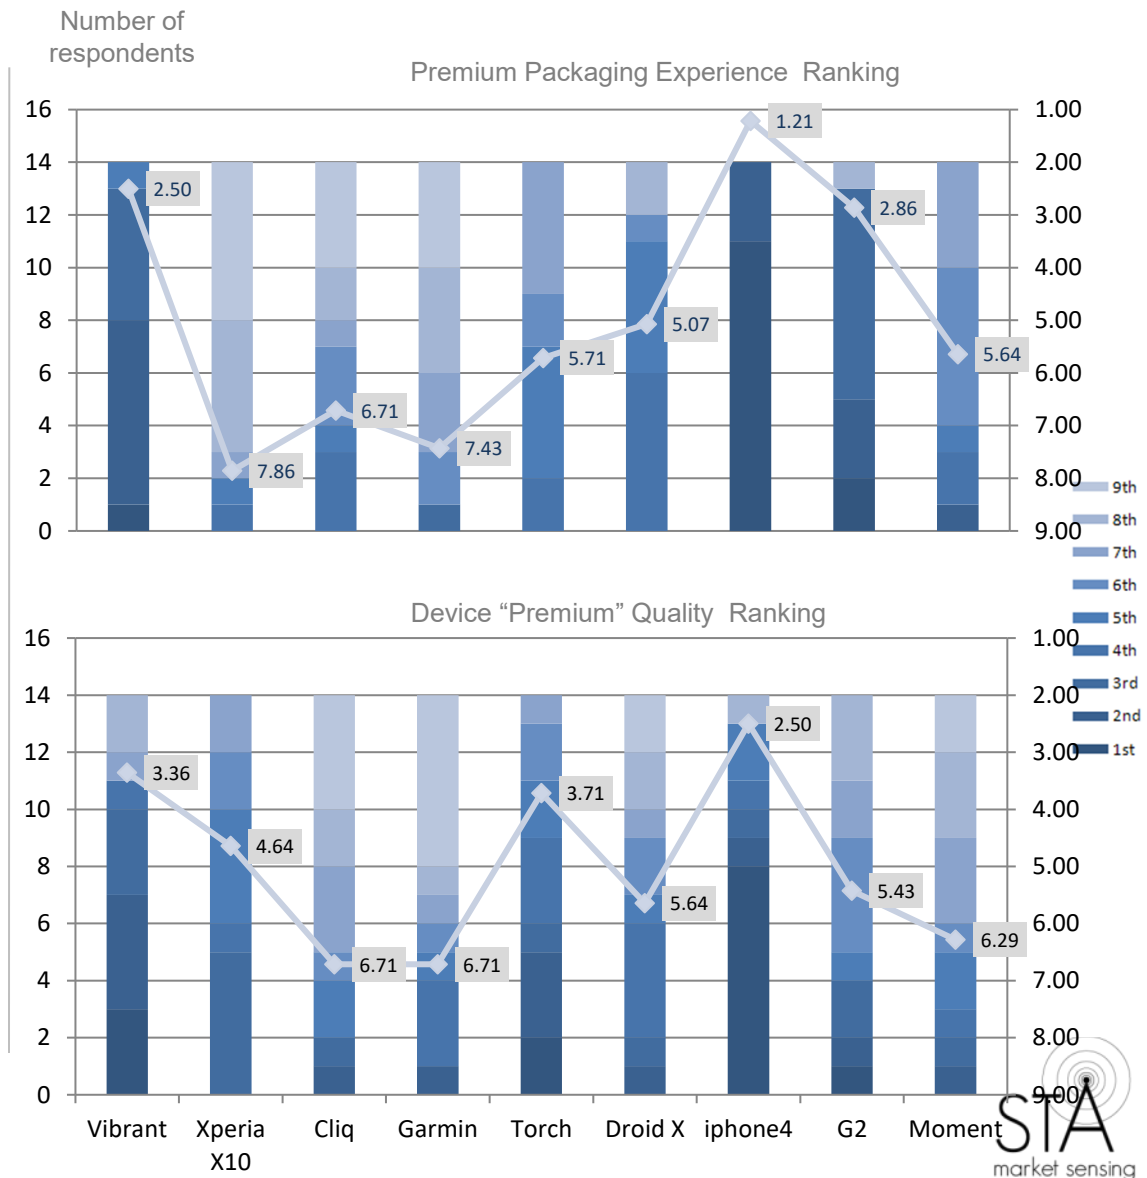

SmartPhone Packaging Ranking

Premium Packaging Ranking

The packaging of Apple iPhone 4, Samsung Vibrant, HTC G2 were ranked significantly higher than Motorola Droid-X, Sprint Moment, Blackberry Torch, Motorola Cliq, Garmin ASUS NaviFone and Sony Ericsson Xperia X10.

Apple iPhone4 and Samsung Vibrant were ranked significantly higher than Samsung Moment, Motorola Cliq and Garmin NuviFone.

Discrepancies between packaging and device premium quality perception were most apparent with Sony Ericsson Xperia X10 in which the packaging was ranked significantly lower compared with the "premium" quality rating of the device. The packaging of Blackberry Torch also was ranked significantly lower than the device. The packaging of HTC G2 was ranked significantly higher than the device itself.

Premium Packaging Evaluation

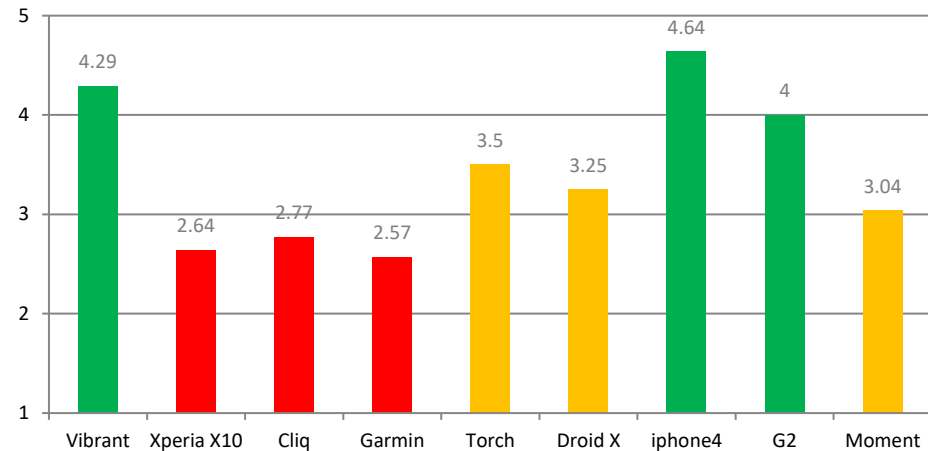

Satisfaction

The packaging of Sony Ericsson Xperia X10 (ATT), Motorola Cliq (T-Mobile), and Garmin Navifone (ATT) scored significantly worse than other packaging in overall satisfaction.

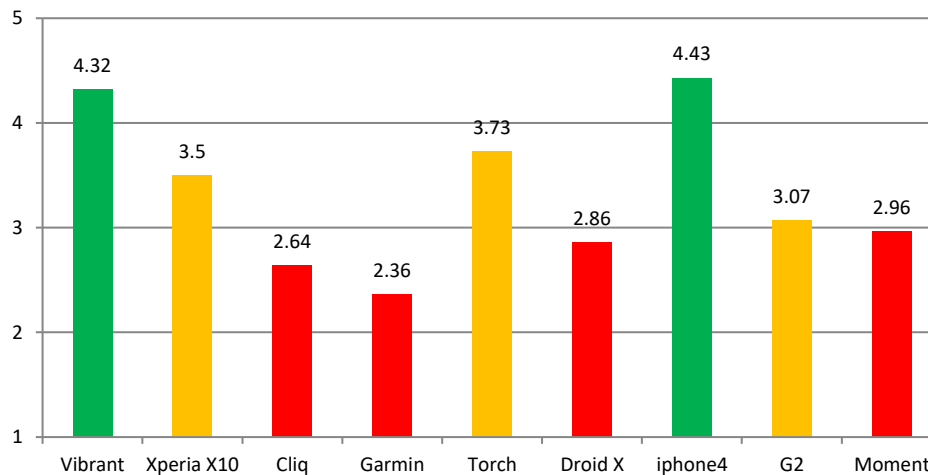

The overall satisfaction of the packaging of Apple iPhone4 (ATT), Samsung Vibrant (T-Mobile) and HTC G2 (T-Mobile) were significantly higher than other packaging.

The overall satisfaction from initial impressions of Apple iPhone4 (ATT) and Samsung Vibrant (T-Mobile) were significantly higher than other phones.

Premium Packaging Evaluation

Expensive Look & Material

The packaging of Sony Ericsson Xperia X10 (ATT), Motorola Cliq (T-Mobile), and Garmin Navifone (ATT) scored significantly worse than other packaging in expensive look.

The rating of the material used in the packaging of Apple iphone4 (ATT), Samsung Vibrant (T-Mobile) and HTC G2 (T-Mobile) were significantly higher than other packaging.

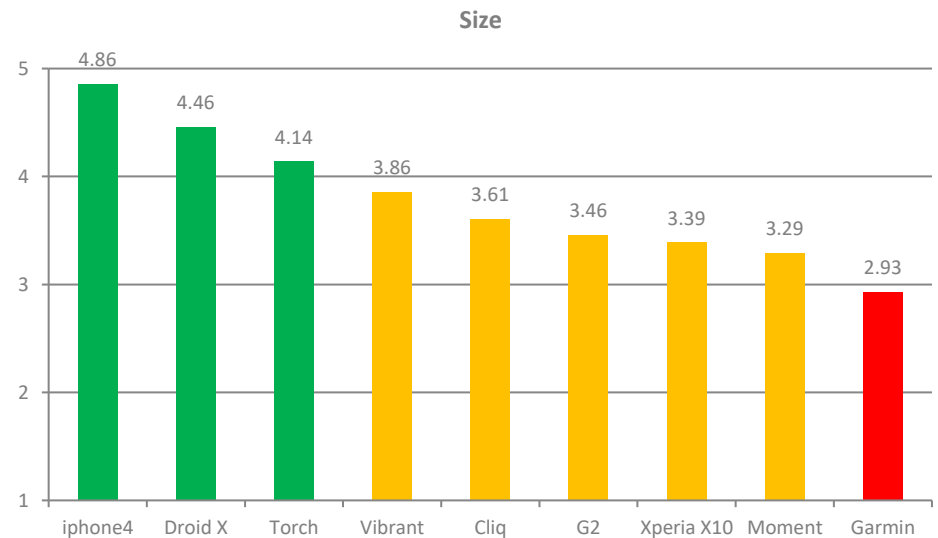

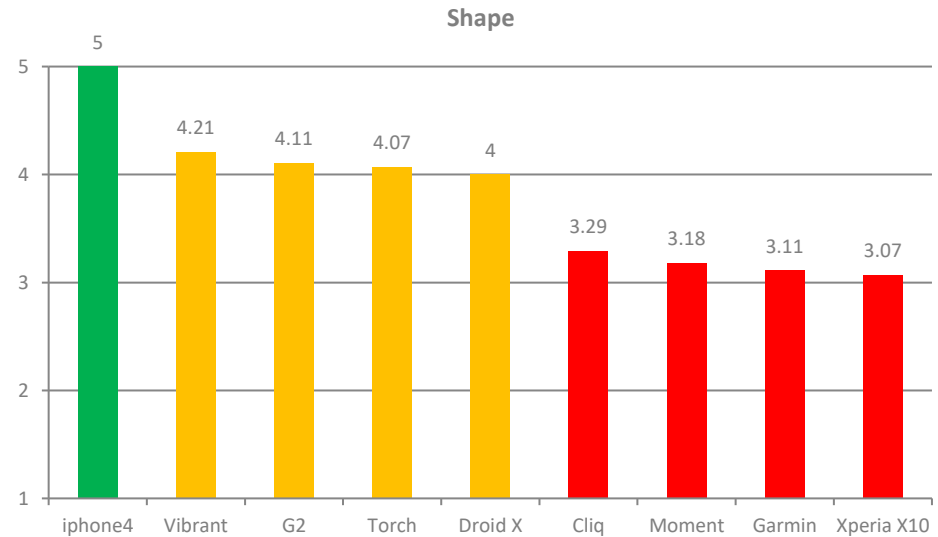

Premium Packaging Evaluation

Shape & Size

The shape of packaging of Sony Ericsson Xperia X10 (ATT), Motorola Cliq (T-Mobile), Garmin Navifone (ATT) and Sprint Moment (Sprint) scored significantly worse than other packaging.

The size of the packaging of Apple iphone4 (ATT), Samsung Vibrant (T-Mobile) and HTC G2 (T-Mobile) were significantly higher than other packaging.

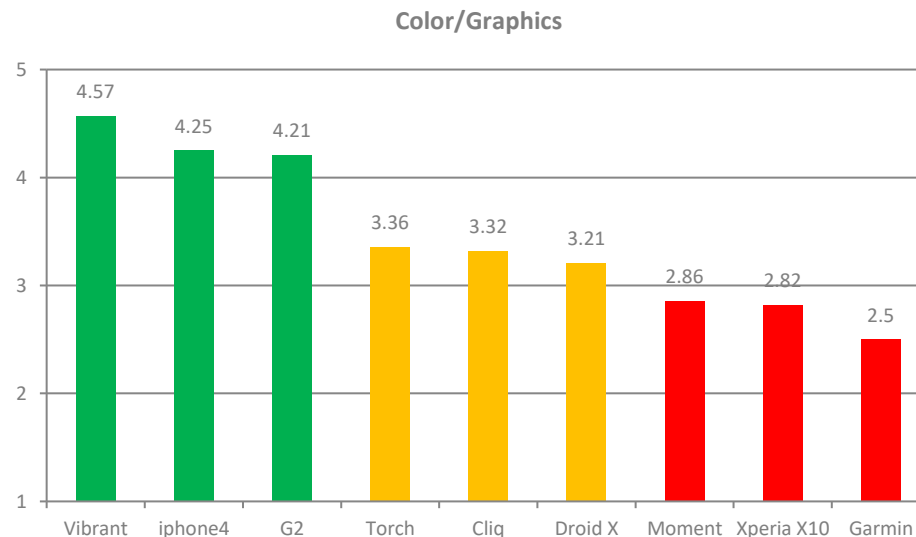

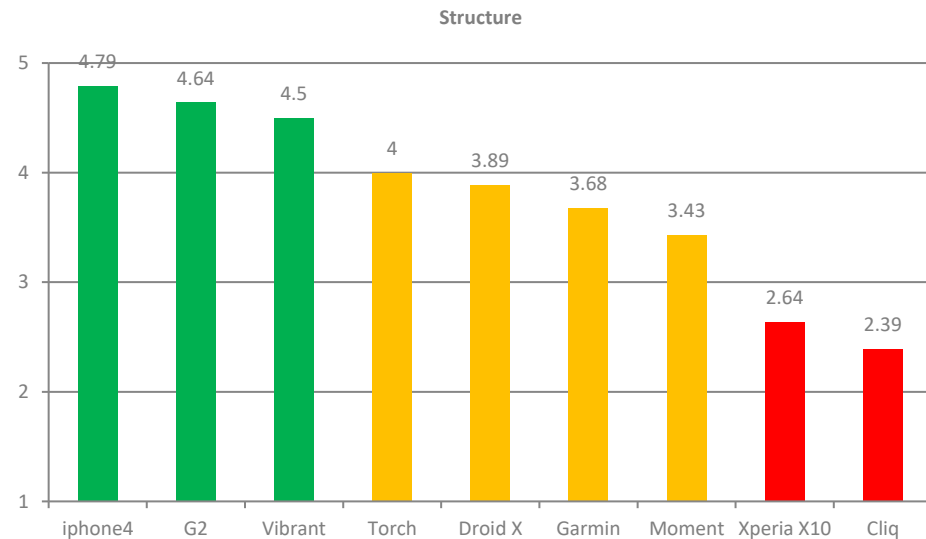

Premium Packaging Evaluation

Structure & Color/Graphics

The packaging structure of Sony Ericsson Xperia X10 (ATT), Motorola Cliq (T-Mobile) scored significantly worse than other packaging while Samsung Vibrant (T-Mobile), Apple iphone4 (ATT) and HTC G2 (T-Mobile) scored significantly higher.

The color/graphics scores of the packaging of Apple iphone4 (ATT), Samsung Vibrant (T-Mobile) and HTC G2 (T-Mobile) were significantly higher than other packaging.

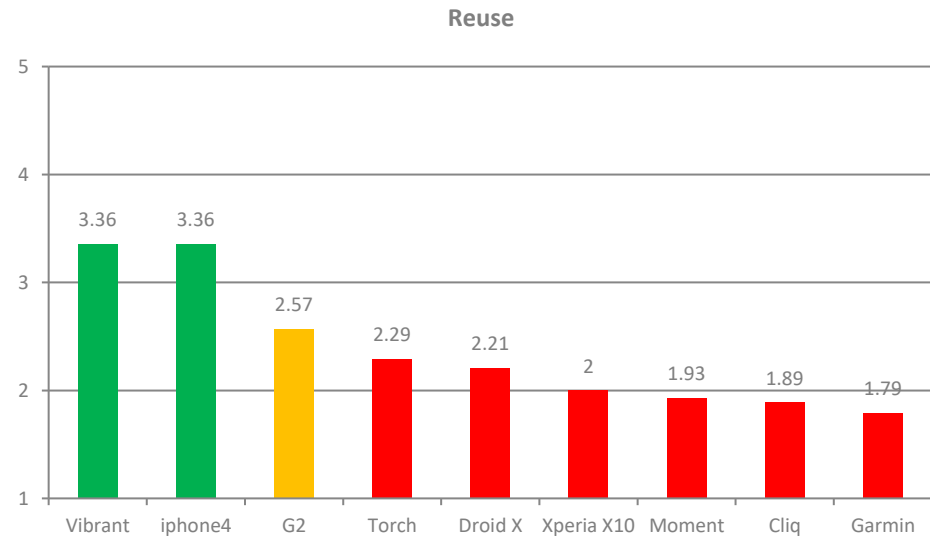

The color/graphics scores of the packaging of Sony Ericsson Xperia X10 (ATT), Garmin Navifone (ATT) and Samsung Moment (Sprint) were significantly lower than other packaging.

Premium Packaging Evaluation

Re-Use

The re-usability of the packaging of Apple iPhone4 (ATT) and Samsung Vibrant (T-Mobile) were significantly higher than other packaging.

Qualitative Analysis

Top Three vs. Bottom Three

- Packaging V, P and W were repeatedly choose for the top three premium packaging.

V: iPhone 4 from AT&T (14 participants)

P: Samsung Vibrant from T-Mobile (13 participants)

W: Google G2 from T-Mobile (13 participants)

S: Garmin nuvifone from AT&T (1 participant)

X: Samsung Moment from Sprint (1 participant)

The most common reason was the graphics are cool and iconic. The participants were also very particular about the sturdiness of the material and their structure. The structure can be simple but the thickness of the material must make them believe that it can protect the product well.

- Packaging Q, R and S were repeatedly choose for the bottom three premium packaging.

Q: Sony Ericsson Xperia X10 from AT&T (12 participants)

S: Garmin nuvifone from AT&T (11 participants)

R: Motorola Cliq from T-Mobile (8 participants)

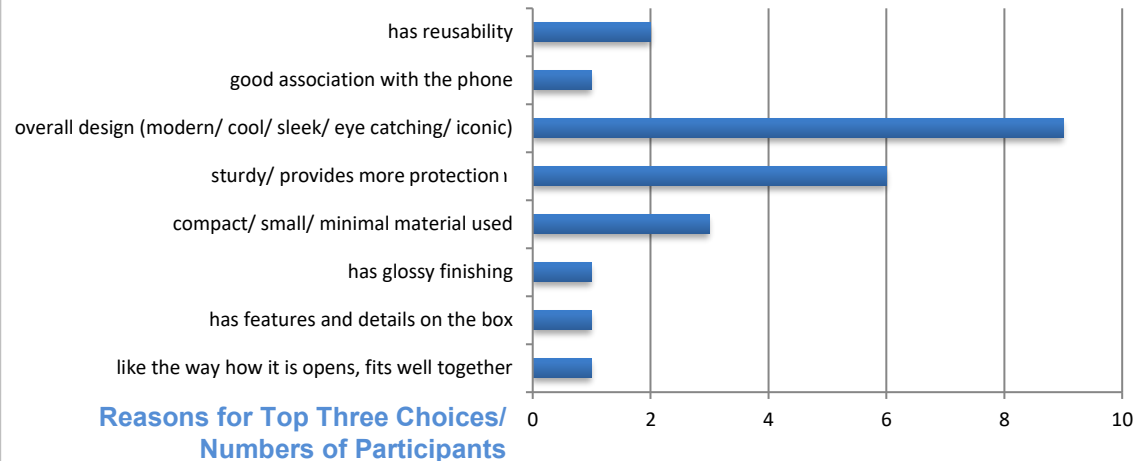

T: BlackBerry Torch from AT&T (5 participants)

X: Samsung Moment from Sprint (4 participants)

U: Motorola Droid X from Verizon (2 participants)

W: Google G2 from T-Mobile (1 participants)

The number one reason was because the material looks cheap, flimsy, and will not provide enough protection. Second reason was because the overall design looks dull, old, and boring.

Qualitative Analysis

Positive Impression for :

P: Samsung Vibrant T-Mobile

V: iPhone4 AT&T

W: HTC G2 T-Mobile

Qualitative Analysis

Positive Impression for :

T: BlackBerry Torch AT&T

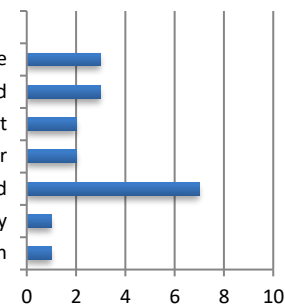

U: Motorola Droid X Verizon

X: Samsung Moment Sprint

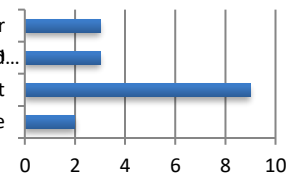

T

- likes the graphics associating with people
- likes the brief description and features listed
- shows different views of the product
- likes the contrasting color
- compact size and shape, easy to hold
- it is sturdy
- easy to open

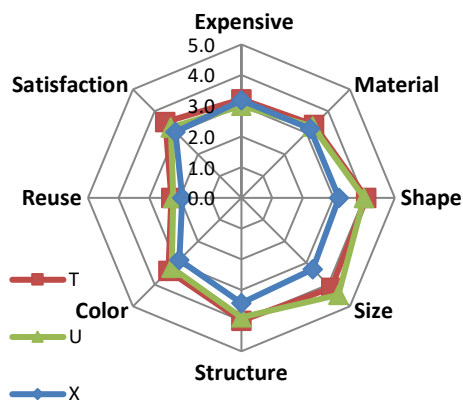

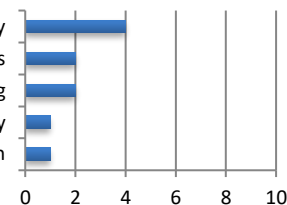

U

- appealing color
- likes the front graphics of the actual product
- likes the graphics & glossy finish...
- good size, small and compact
- seems durable

X

- front cover graphic has personality
- it has details of the features
- good size for packaging
- it is sturdy
- easy to open

Qualitative Analysis

Will the reusability of the packaging effect the overall value of the phone?

- Reusability is not important enough to be an influence factor.
- Most of the participants kept their mobile packaging in order to store the instructions and accessories.
- One participant mentioned reusability of the packaging might enhance the brand images.
- One participant mentioned the only reason she kept the packaging was because it could increase the online resale value of the phone.

Qualitative Analysis

How did the quality of packaging influence the purchasing experience?

- Quality of the packaging does matter.
- 9 out of 14 participants believed the quality of packaging will have a direct impact on their purchasing experience of smartphones.
- Because most participants do not have direct interaction with packaging until the final purchase in store, therefore, the packaging is the first impression of the actual device they are going to use.
- Consumers expect packaging to provide full protection for the actual product. When it feels like flimsy, it will reflect poorly on the quality and value of the actual mobile products.
- Based on the result of the Satisfaction Rate and Ranking, the participants were more attracted toward:
 1. Packaging that are thick and structurally solid.
 2. Iconic graphic elements that can be associated with the products.
 3. Compact shape and size with minimal materials.

Qualitative Analysis

Conclusion

- In the retail environment, packaging is less important as retail stores only display the products (or mockups) but not their packaging. Packaging is still an important part of the overall purchasing experience as it can enhance or diminish the perception of overall quality after the product is purchased.
- In today's market, consumer's main concern is on the protective function of the packaging such as having thick wall structure in the box.
- Packaging must represent and synchronize with the overall product image. It can be simple but it needs to have its own personality.
