

Samsung® Premium Smartphone Market Research

September 2019

Survey Goals & Approach

1,000-person Survey of the Premium Smartphone Market in US

Survey was distributed to premium smartphone owners in the US.

Targets:

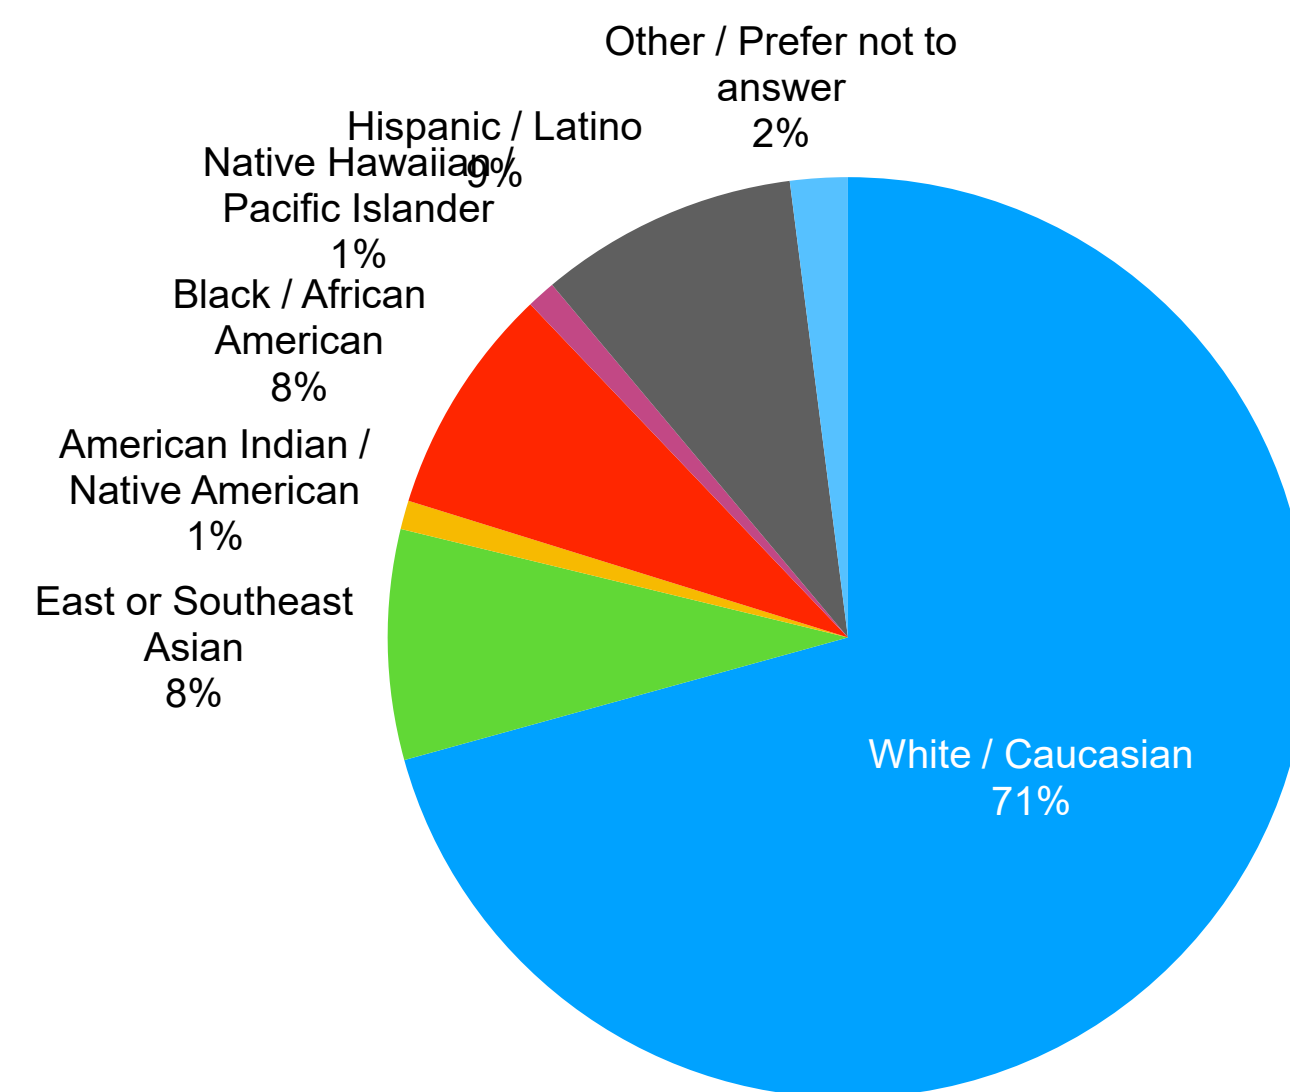

- 1,000 respondents
- Phone ownership breakdown: 40% Apple, 40% Samsung, 20% Other Android.
- All owners of newer phones.
- Mix of demographics.

Key Goals for the Survey

- What does the US Premium Smartphone market look like in 2019?
- What features and experiences are of value to Samsung owners?
- Are there any differences between Samsung and Apple owners in terms of valued features & experiences?
- Where are their opportunities for Samsung to capture new market segments?
- What do younger generations value?

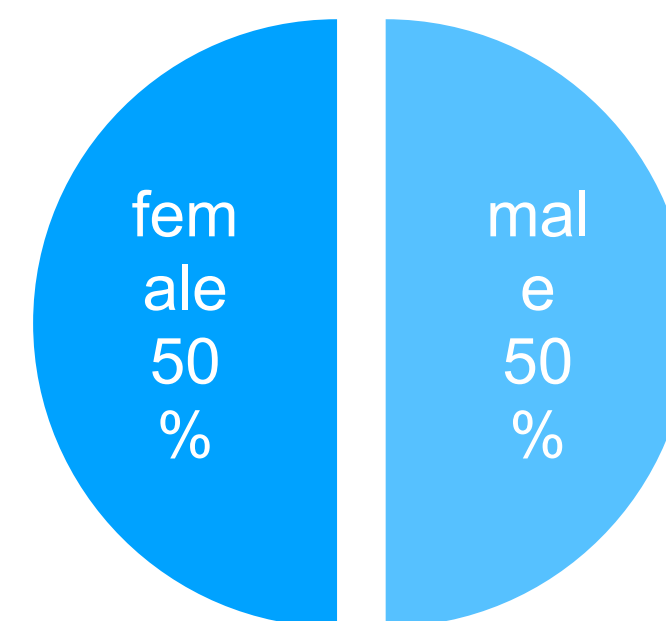

Participant General Demographic Data

The total number of respondents was 1,004. Below is a breakdown of respondents across standard demographic categories.

Market Segments

Segmentation Approach

Clustered on smartphone features & brand loyalty

After experimenting with multiple clustering strategies to find the one that was most useful to Samsung, we landed on 5 segments clustered on smartphone features and brand loyalty.

1. Smartphone Brand Loyalists vs. Non-Loyalists

Understanding the Premium Smartphone buyer on a loyalty spectrum allows Samsung to understand who to target and how to target them. It answers questions like: who is most capturable in the market?

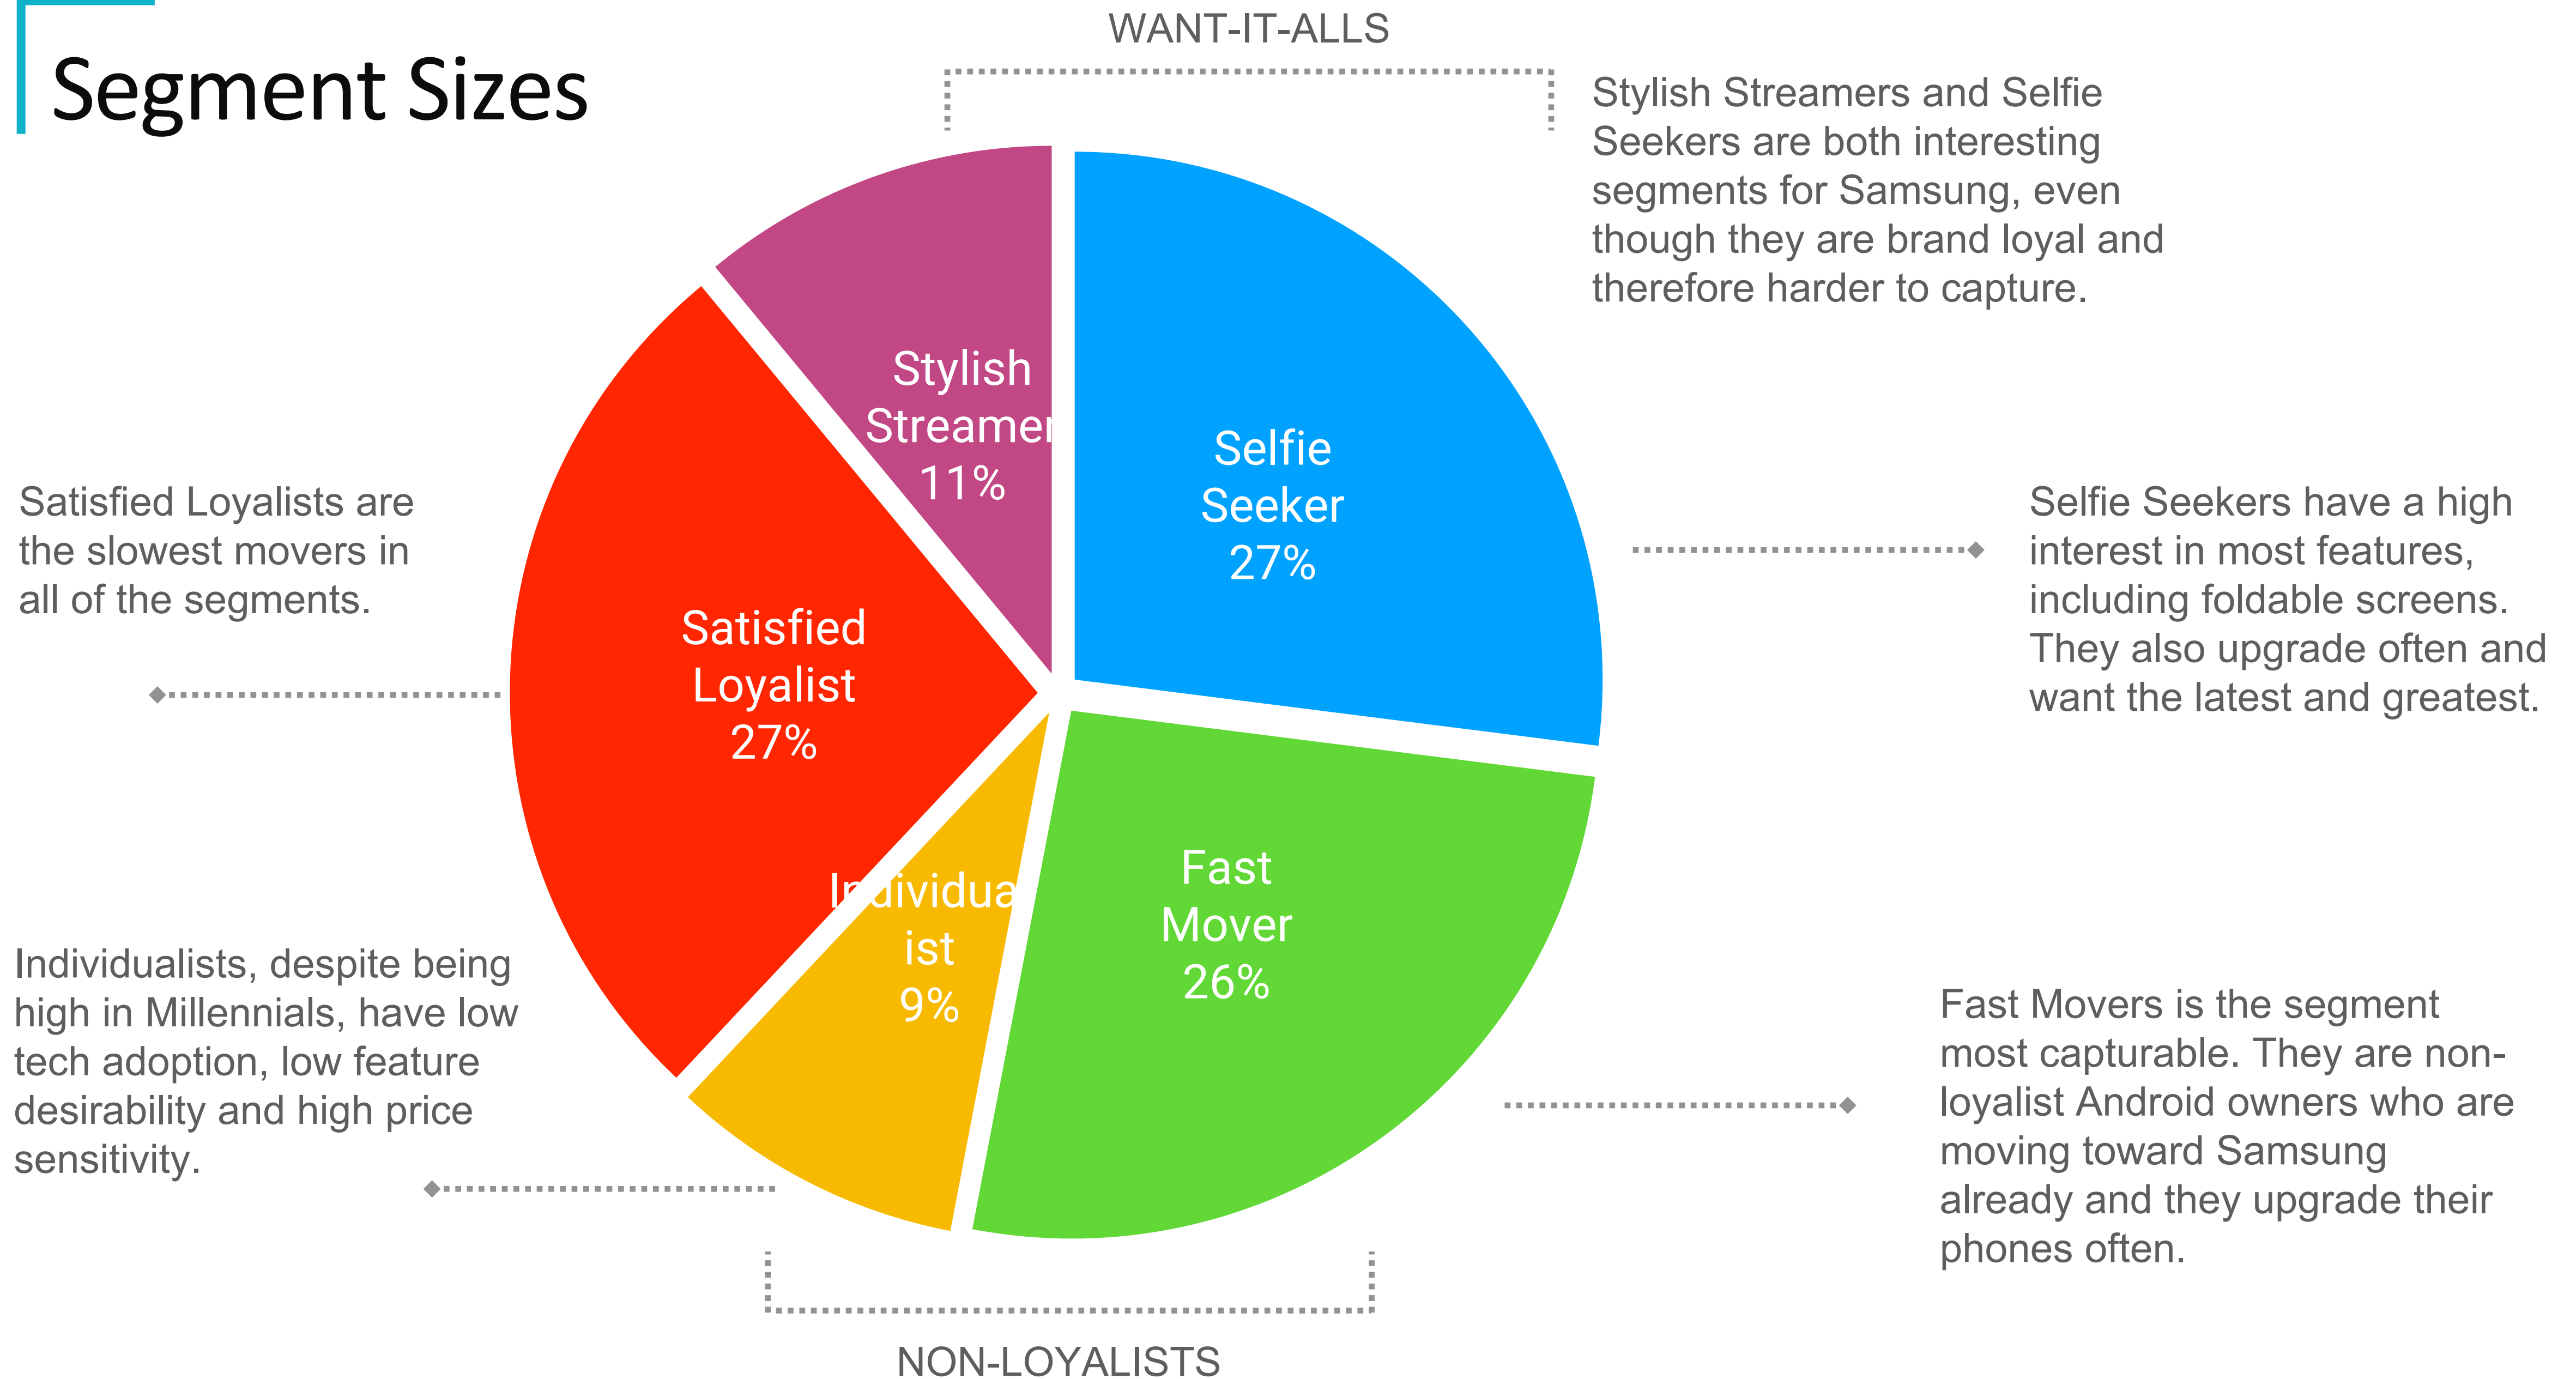

2. Feature differentiation

Samsung Features give us a product development strategy for converting non-loyalists and also for keeping Samsung loyalists or attracting Apple / other Android loyalists. It allows Samsung to understand what features have the opportunity to differentiate.

The Segments

Selfie Seeker	Satisfied Loyalist	Stylish Streamer	Individualist	Fast Mover
				
Phone Brand Loyal Segments			Phone Brand Non-Loyal	
Age undifferentiated Phone brand undifferentiated	More likely Baby Boomers Affinity to Apple	Age undifferentiated Phone brand undifferentiated	More likely Millennials High Affinity to Google	More likely Gen Z Low Affinity to Apple
Heaviest Camera Usage Selfie Camera ++ “Want it all” - high on most features Shop luxury brands	Daily communicators Value Travel & Family	Heaviest media streamers Premium audio Wireless ear buds Fashion & Fitness	Lowest on most features Luxury brands not important	High performance gaming Moderately High in desire for large display, folding screen & AI
Fast phone refresh High Tech Affinity	Slow phone refresh Low Tech Affinity	Paid highest for phone Med-High Tech Affinity	Low Tech Affinity	Fast phone refresh Med-High Tech Affinity

Segment Sizes

Non-target segments

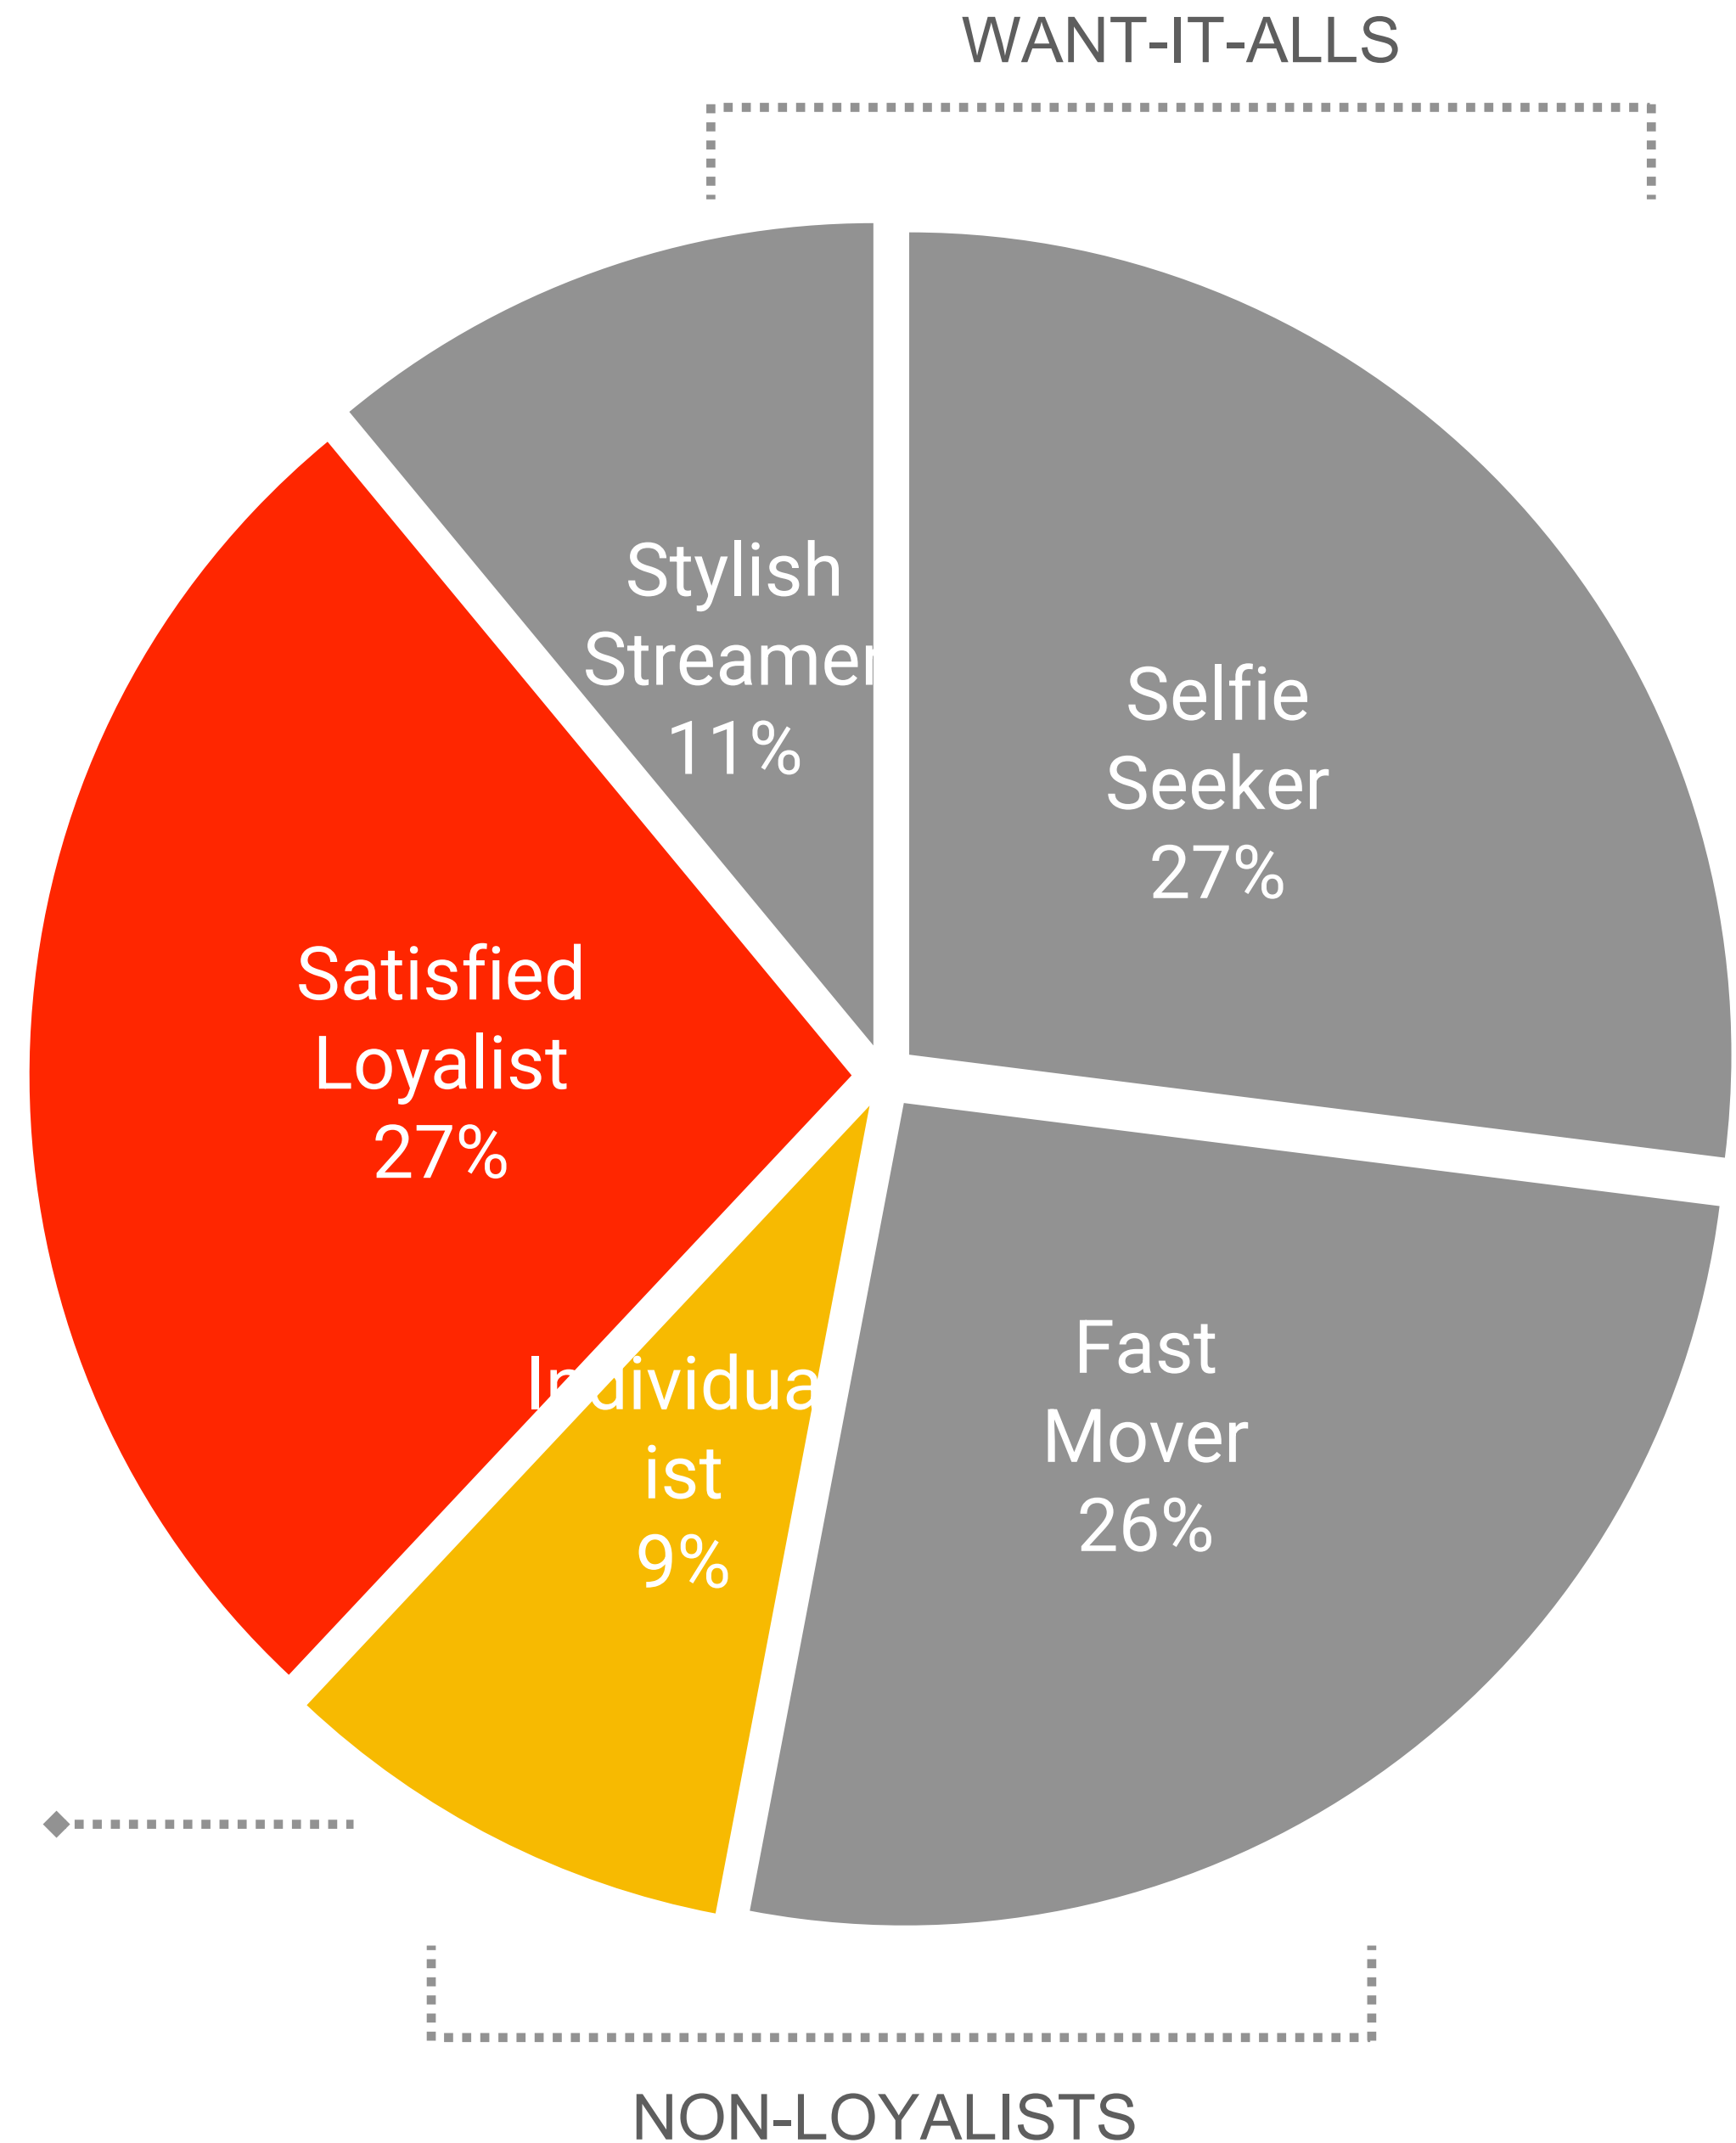

Satisfied Loyalists

Loyalists segments are important to understand how to retain highly loyal current customers. However, given Satisfied Loyalists' slow tech adoption and low feature affinity, we think Selfie Seekers & Stylish Streamers are much more important Loyalist segments for Samsung to focus on.

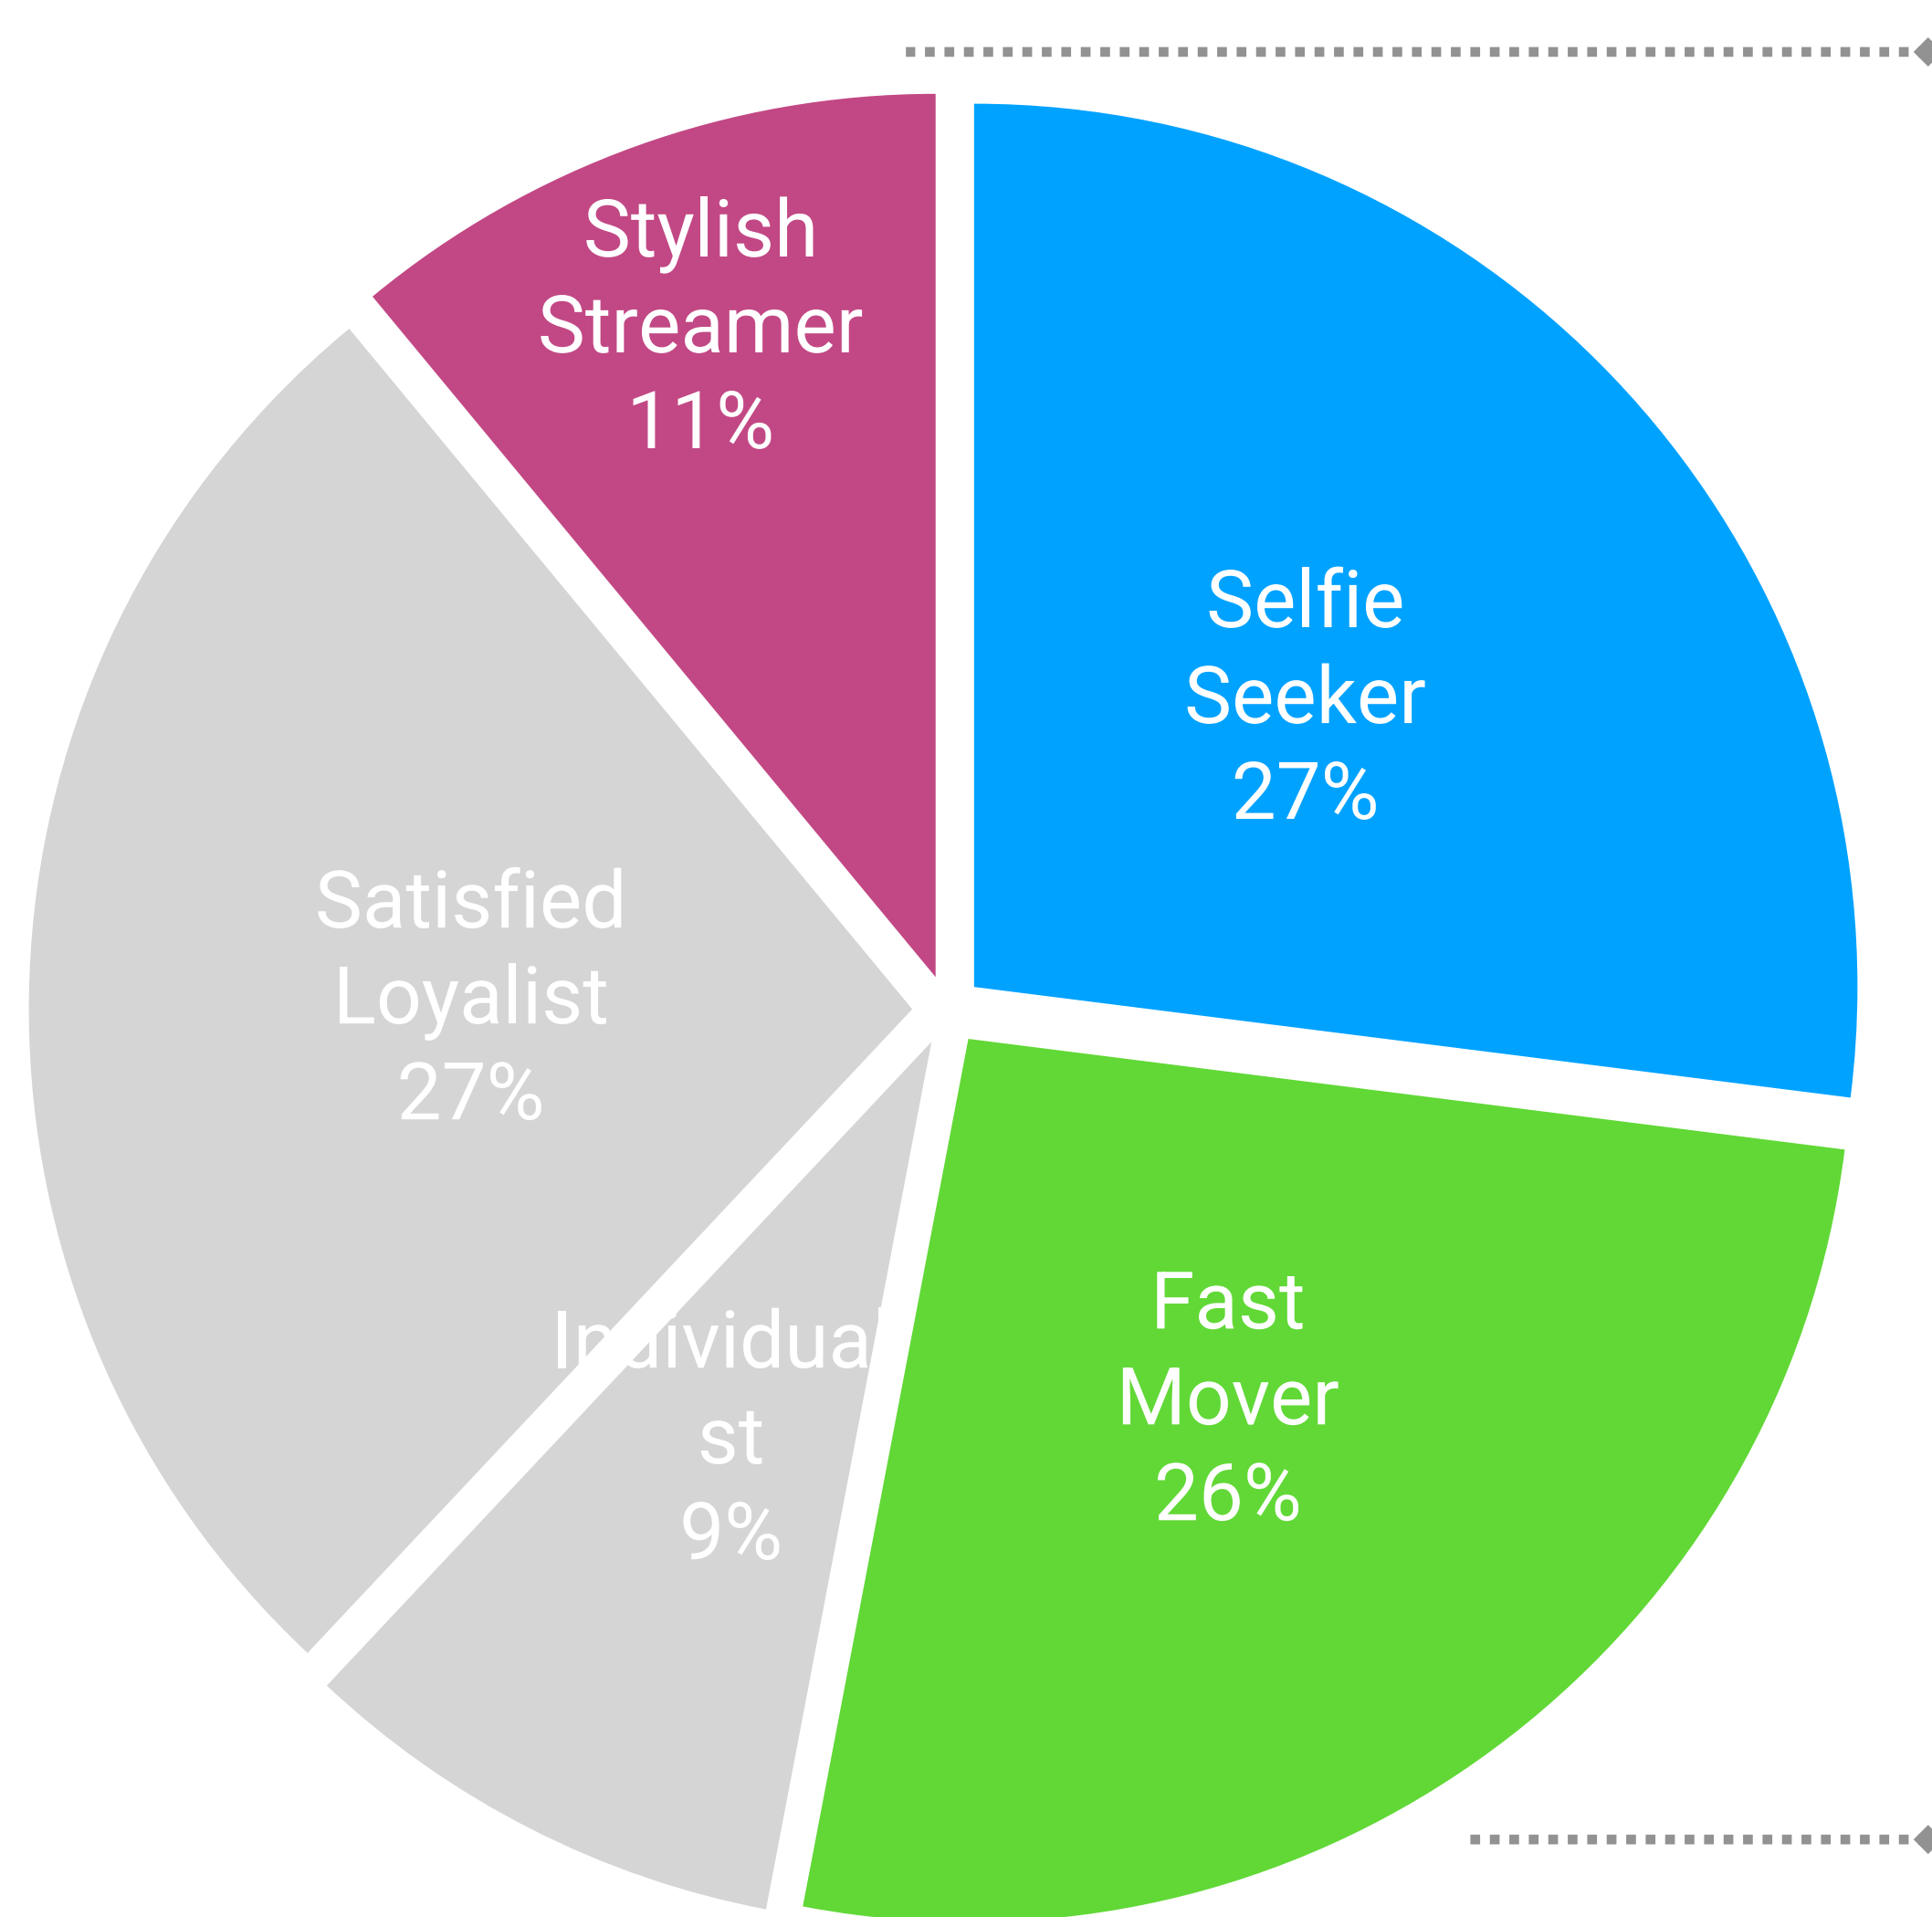

Individualists

Although Individualists are non-loyalists and therefore potential for moving to Samsung. They also have low tech adoption, low feature desirability and high price sensitivity. Therefore, they seem like a less desirable segment for Samsung to target.

Target Segments

Stylish Streamers

This segment is interesting because they have the newest phones, they are toward the head of the pack on tech adoption and they will pay anything for the phone they want. They differentiate strongly on Streaming and Quality Audio.

Selfie Seekers

This segment wants it all - including foldable screens. 57% of Apple owners in this segment rate foldable screens as very important. They also appear to be making a slight shift toward Samsung, despite their strong loyalty ratings.

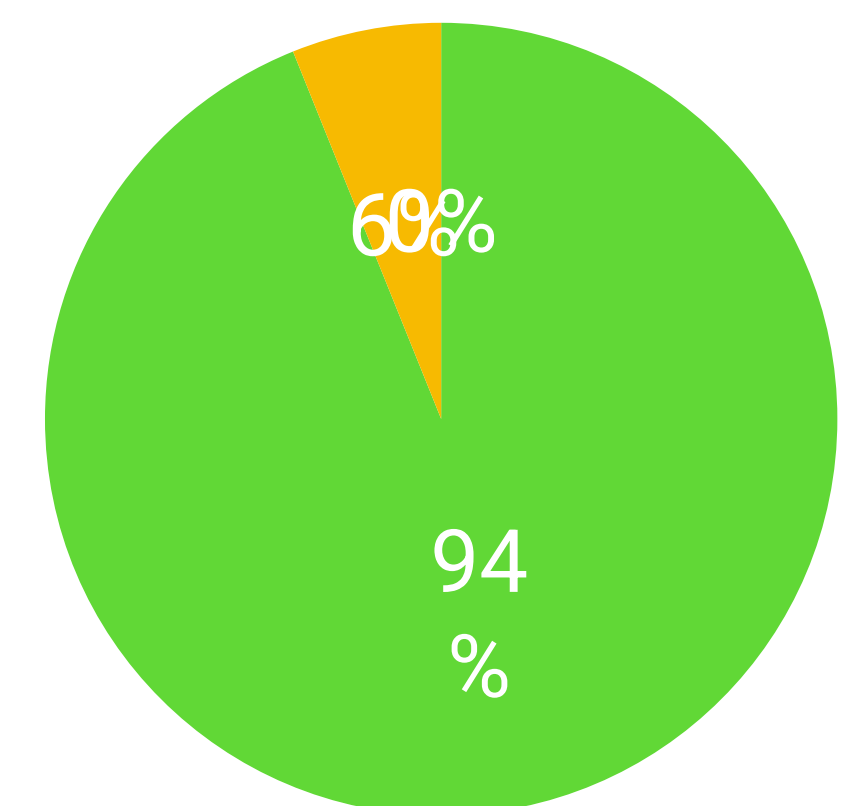

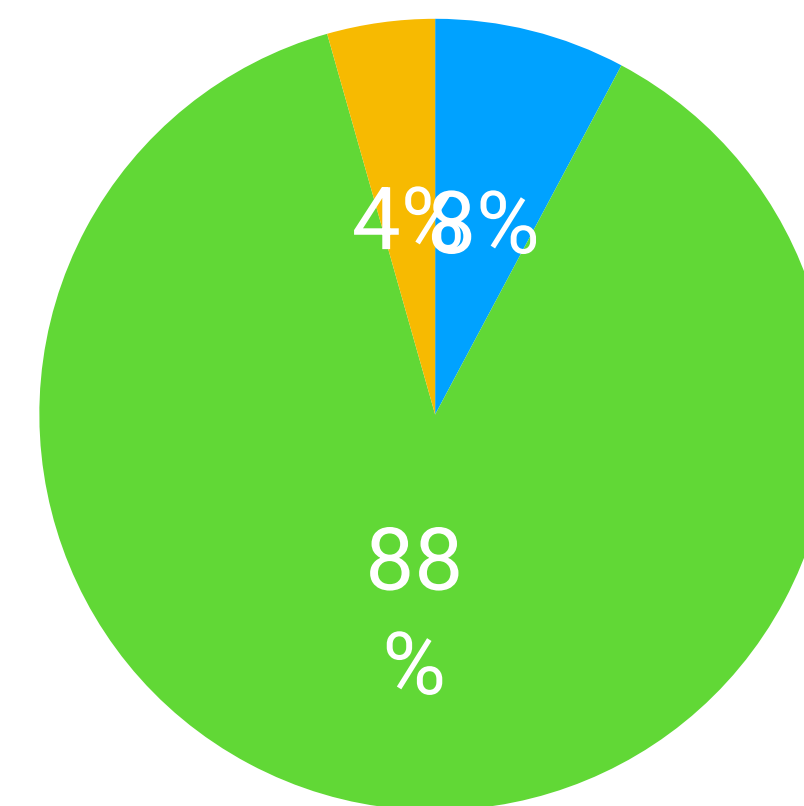

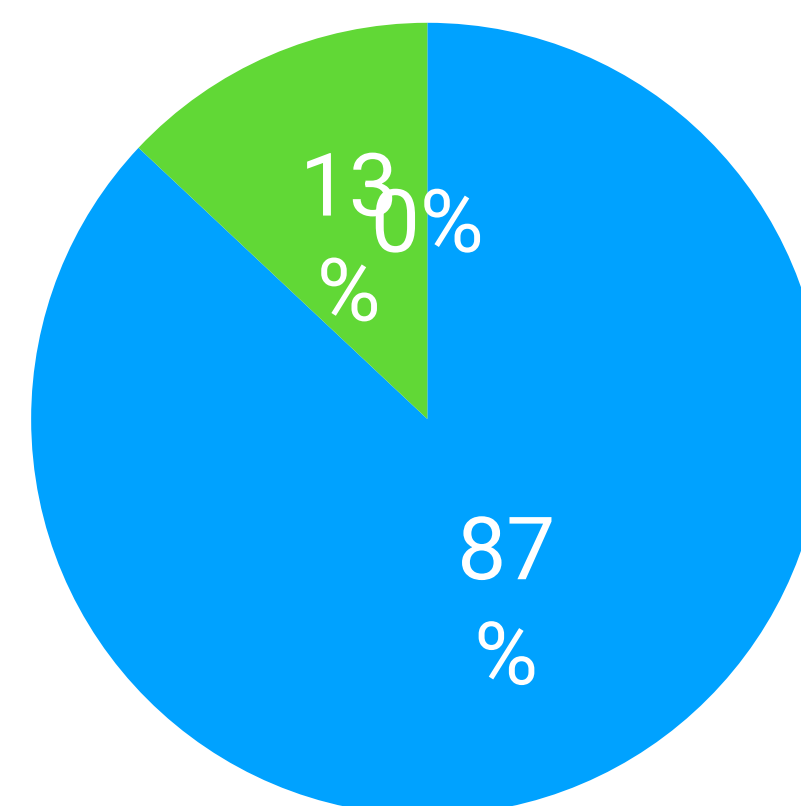

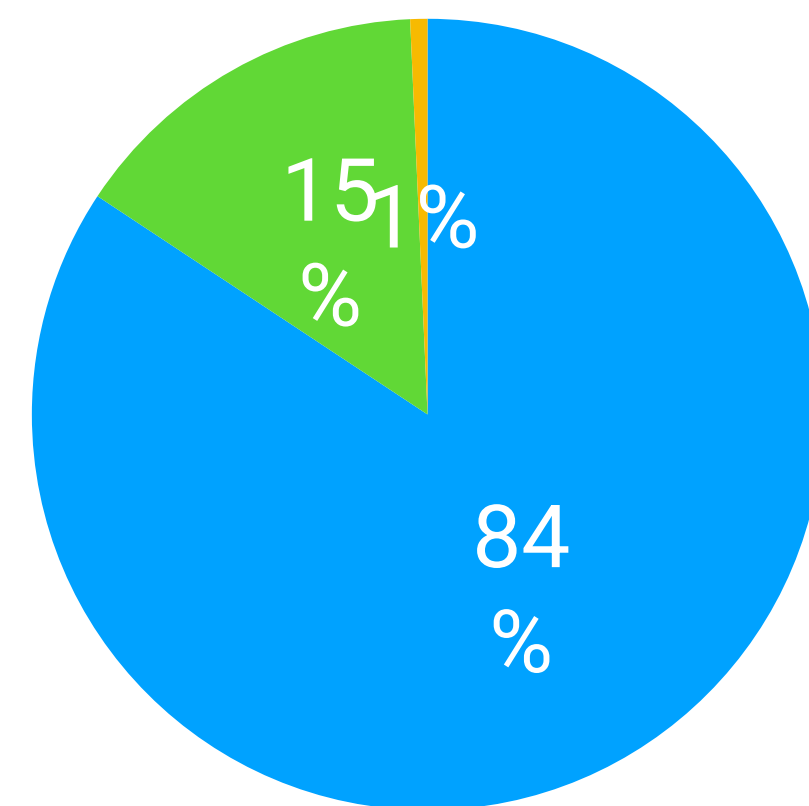

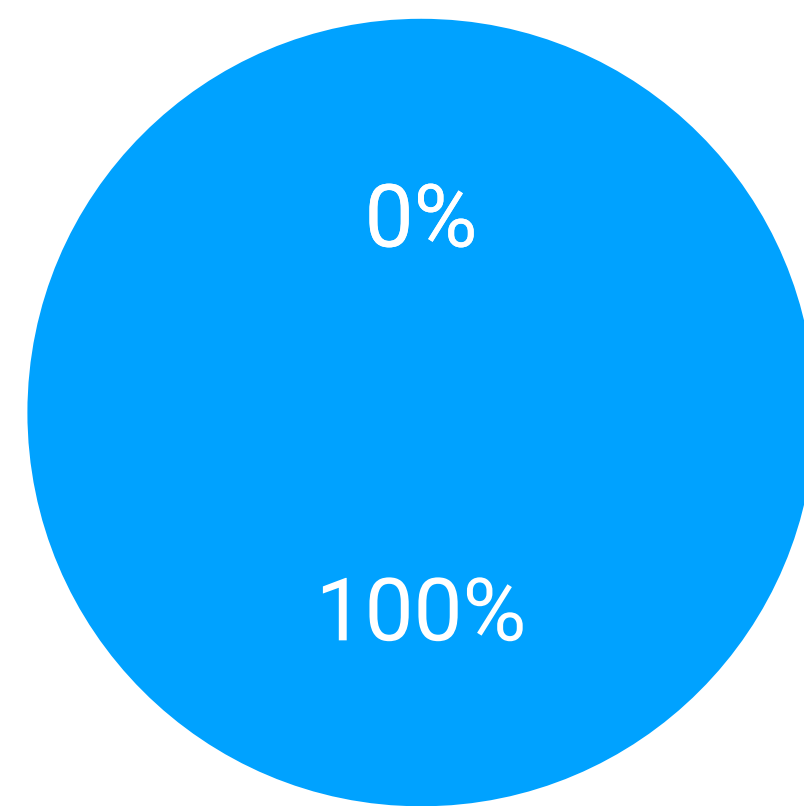

Fast Movers

They are non-loyal to their current phone brand and they are moving to Samsung more than any other segment (from 41% to 48%). They are high in performance gaming, desire for large & foldable screens as well as Artificial Intelligence.

Segment comparisons: Loyalty to phone brand

- I love [my current phone brand], and it would take a lot to convince me to use a different brand of phone
- I like [my current phone brand], but I am open to other brands of phone
- I do not care what brand of phone I have

Selfie Seeker

Satisfied Loyalist

Stylish Streamer

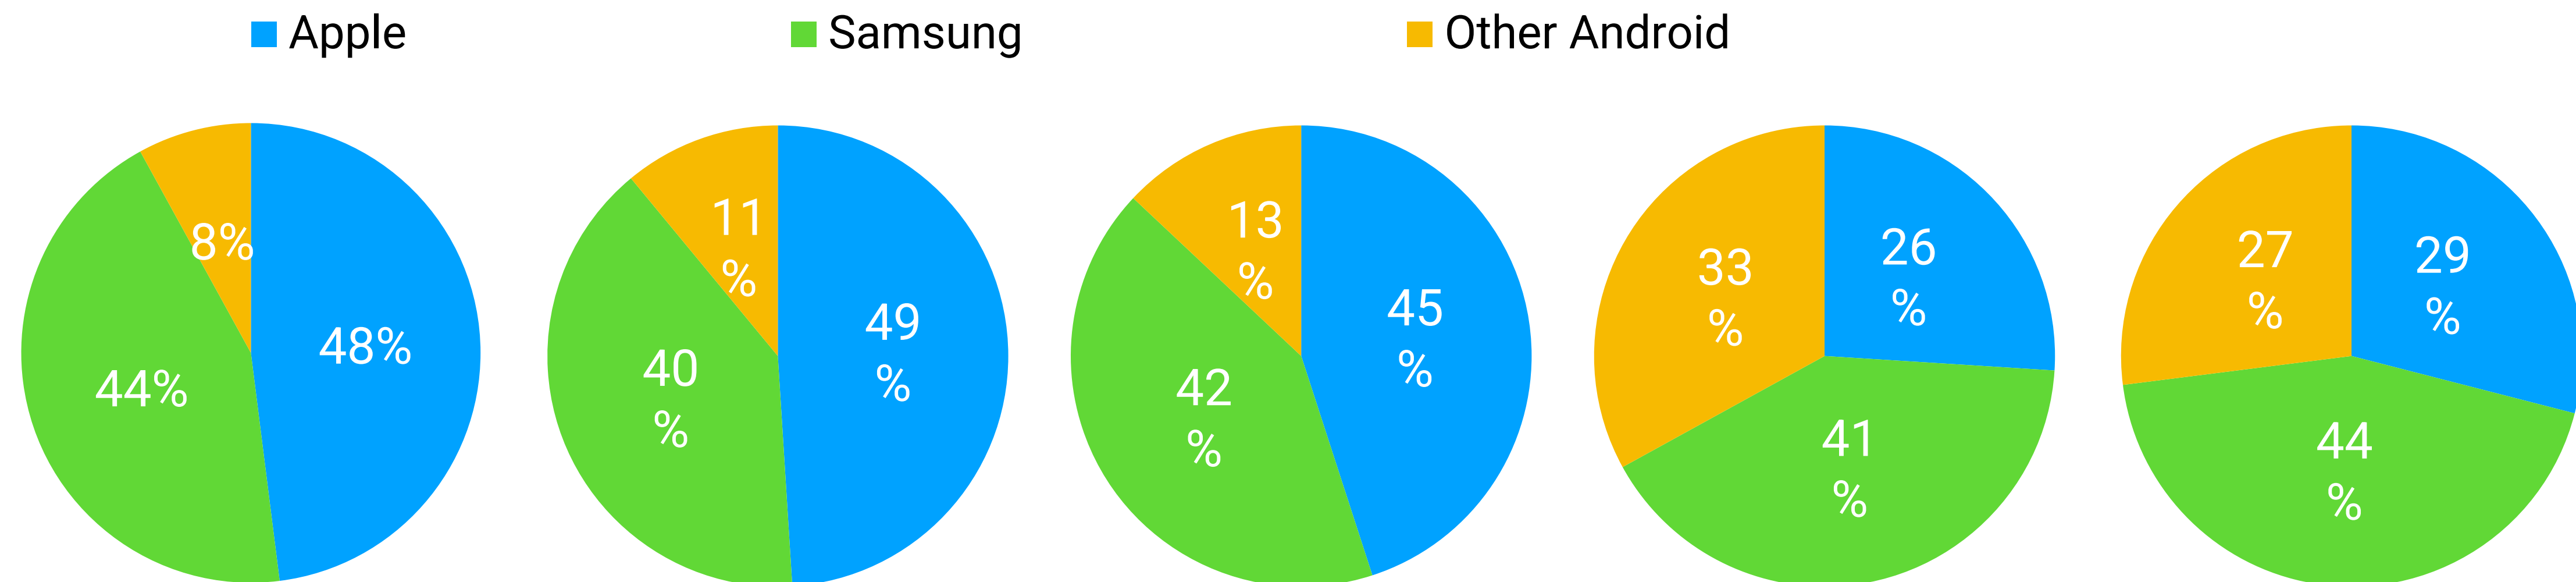

Individualist

Fast Mover

Segment comparisons: Phone Brand Ownership

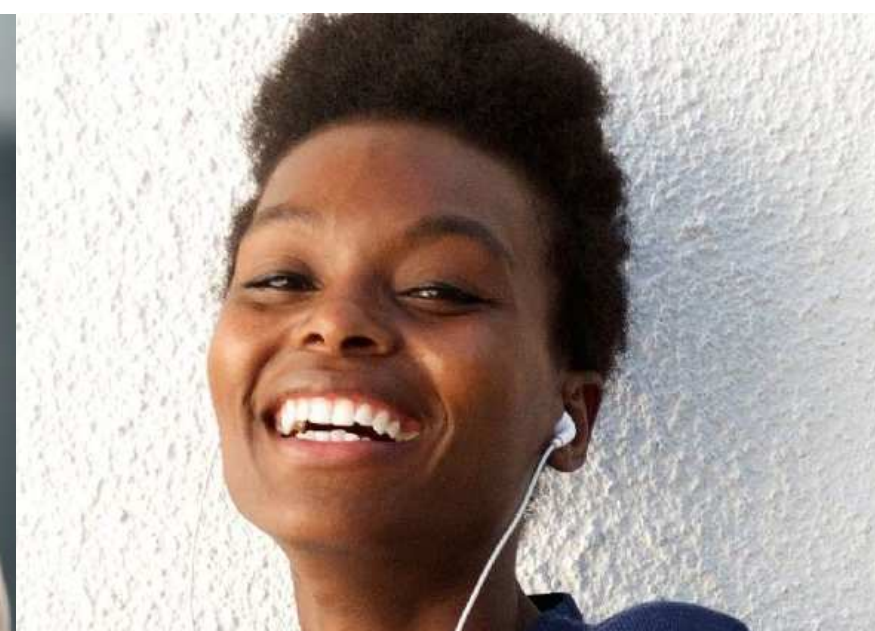

Individualists & Fast Movers, the two Non-Loyalist segments, are dramatically higher than the other segments in Other Android ownership.

Selfie Seeker

Satisfied Loyalist

Stylish Streamer

Individualist

Fast Mover

Segment comparisons: Tech adoption

Selfie Seekers and Stylish Streamers, and Fast Movers tend to adopt technology products early, while Satisfied Loyalists and Individualists tend to wait.

Usually try new products before others do

Fast Movers are relatively tech forward, but they tend to spend less on tech products (see next slide)

Upgrade cycle less than 18 months

Wanted latest and greatest phone

Although Satisfied Loyalists and Selfie Seekers are the most likely to be Apple owners, they are at opposite extremes in their tech adoption

Segment comparisons: Spending on products

Selfie Seekers and Stylish Streamers are willing to pay more for products that they like

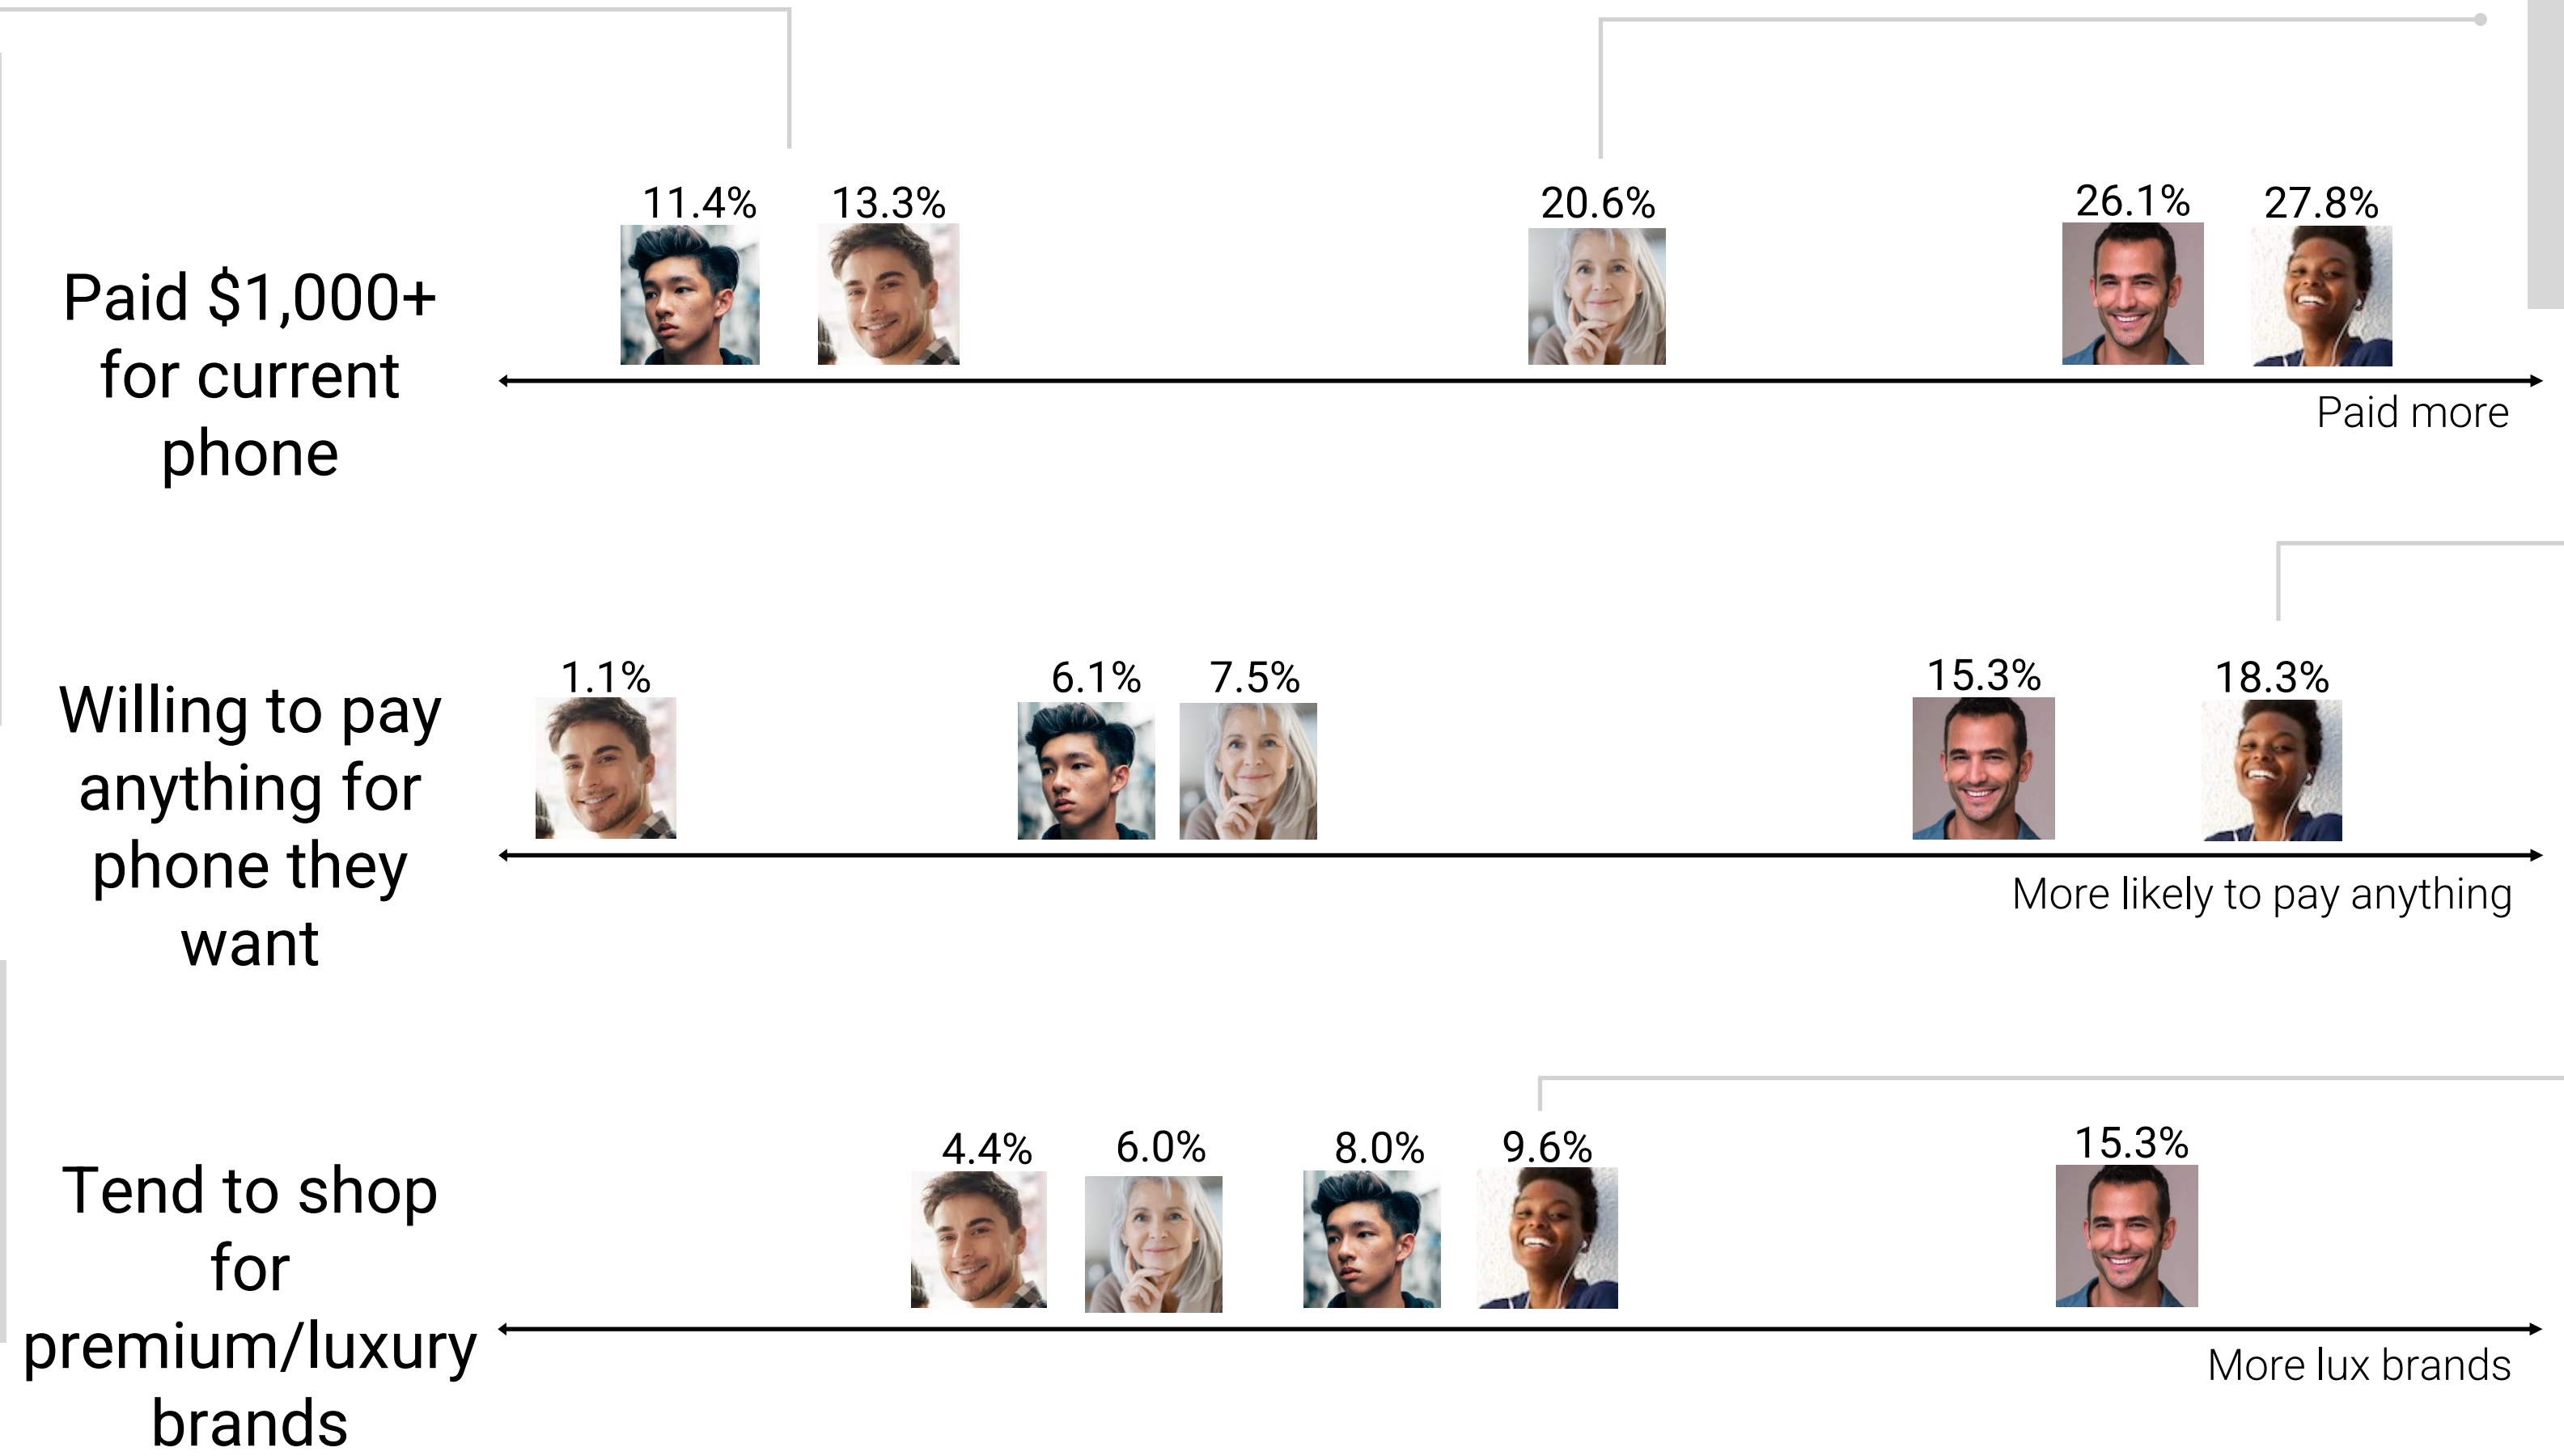

Fast Movers and Individualists are the most likely to own Other Android phones, which may be why their current phone prices are lower.

Individualists are the most likely to own Google Pixel phones (21%)

While they are not high in tech adoption, Satisfied Loyalists are most likely to own Apple phones and to have a household income of \$100,000 or more

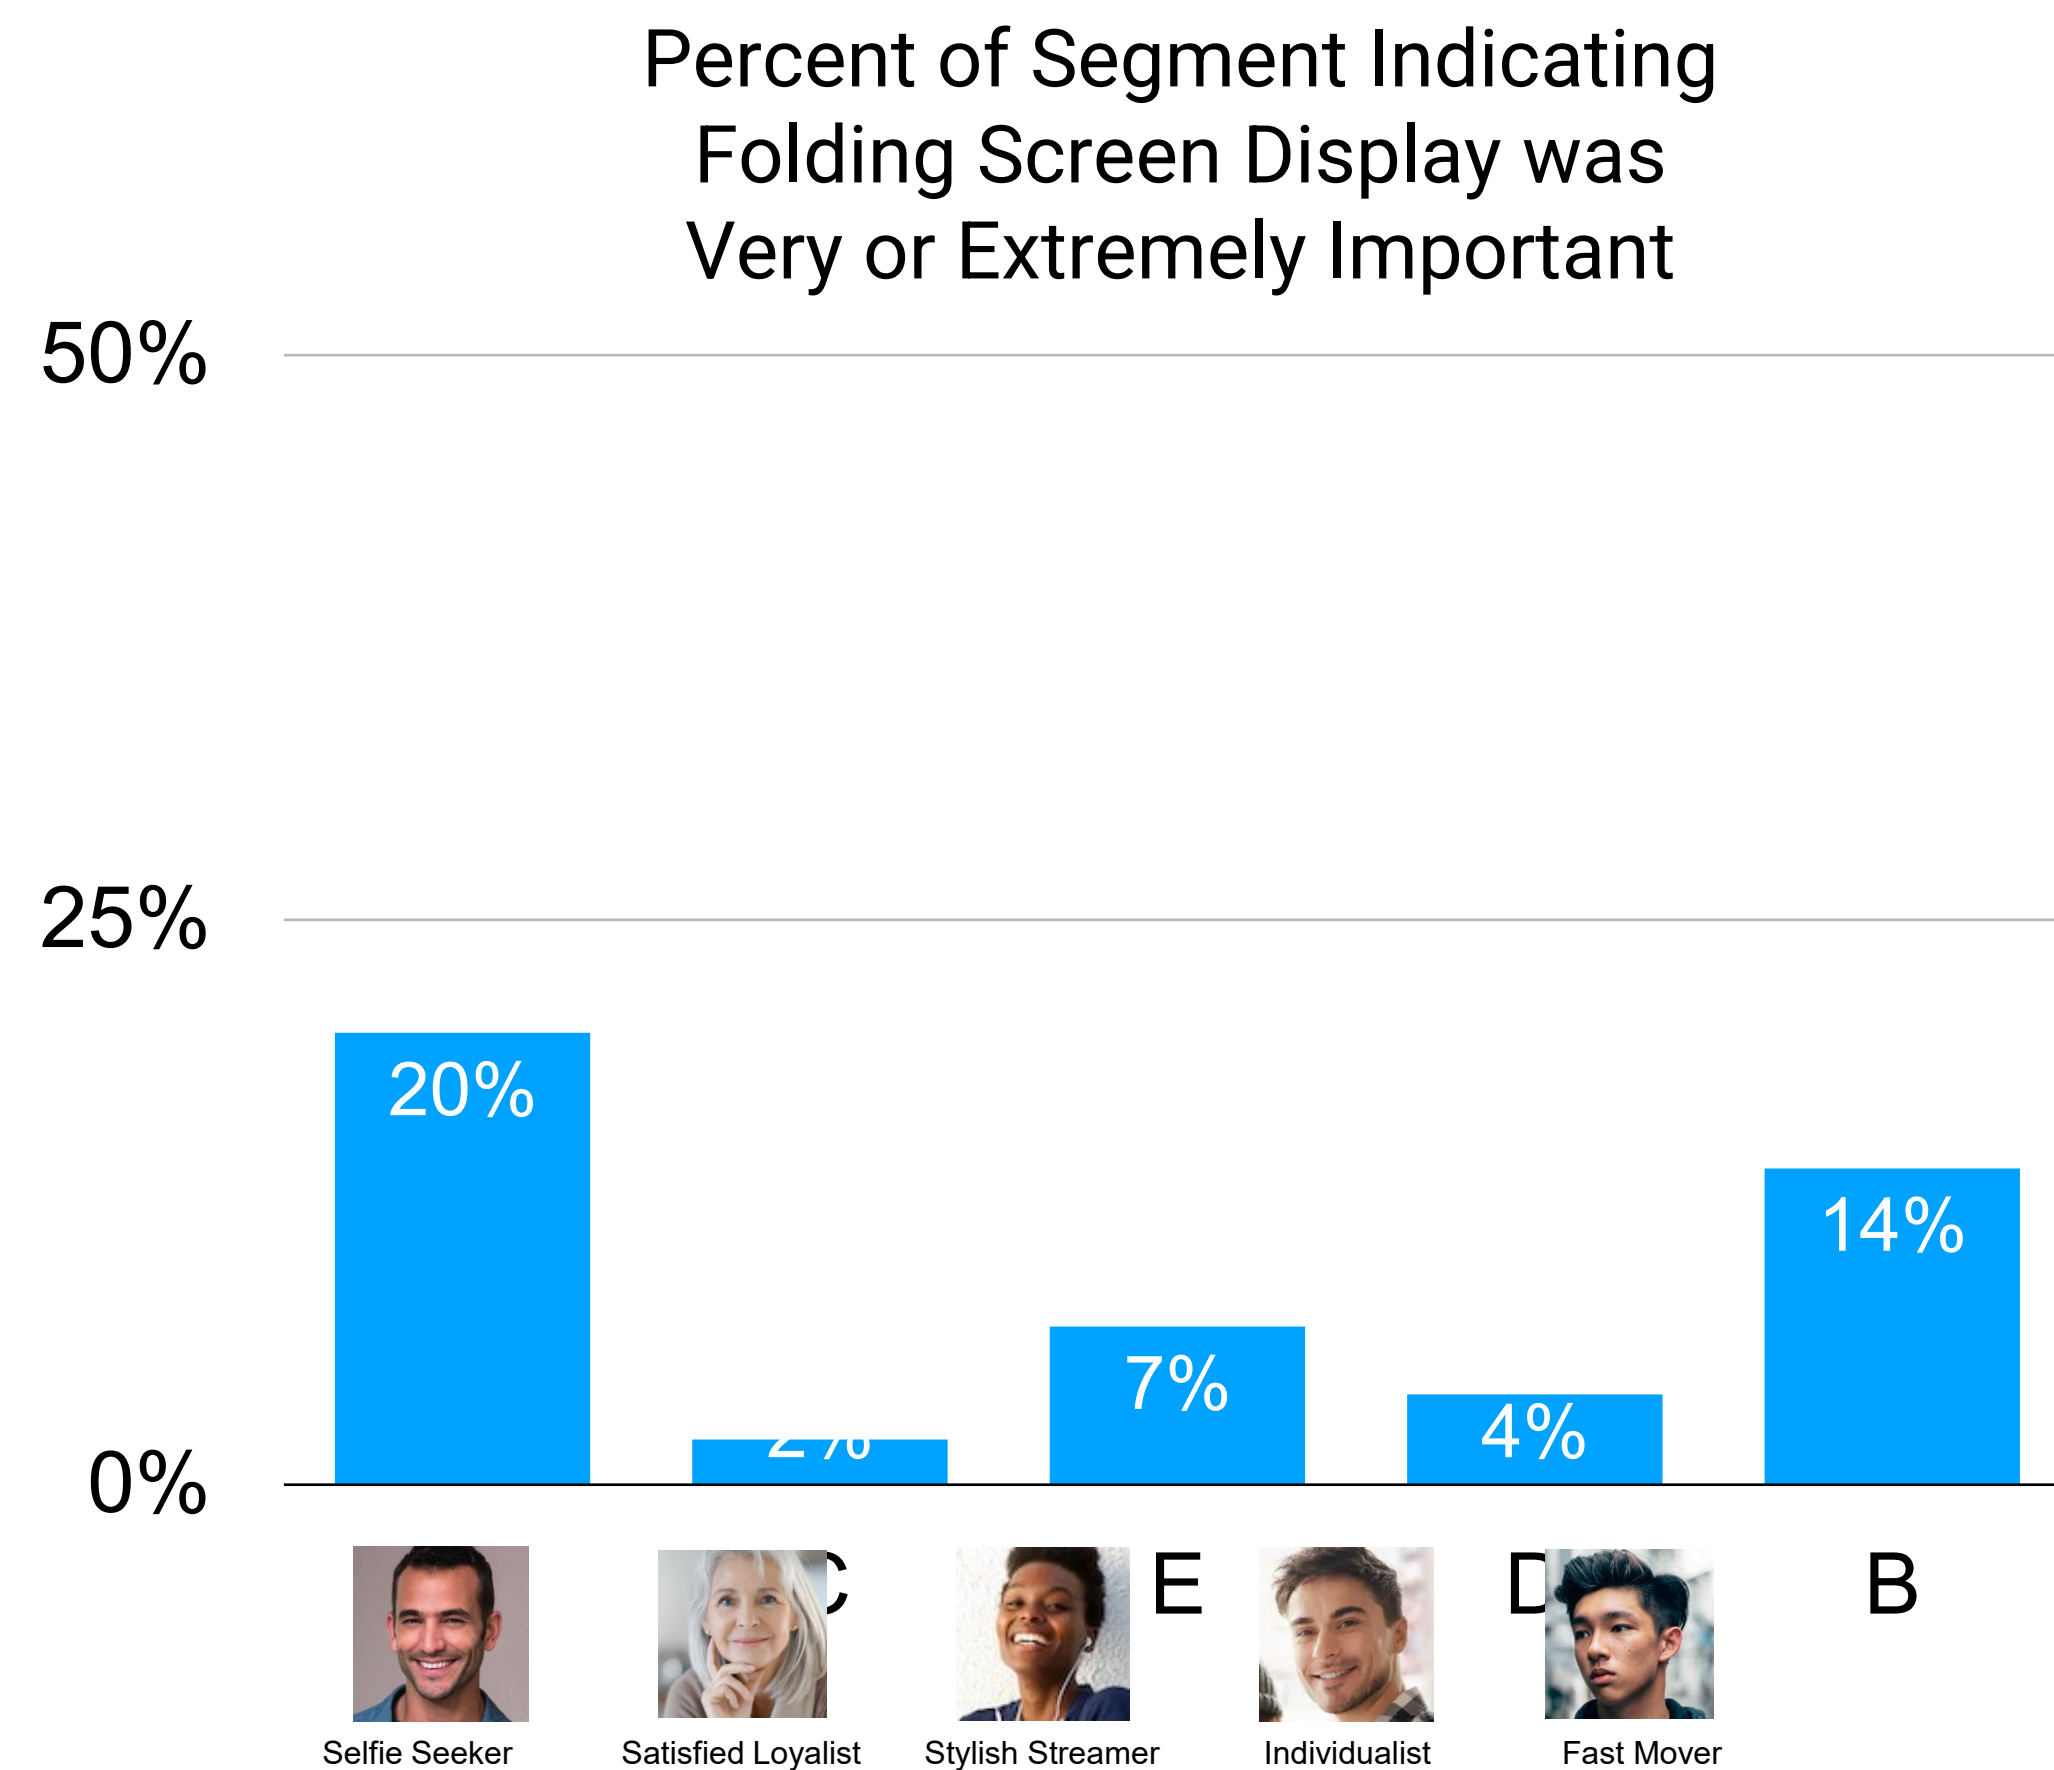

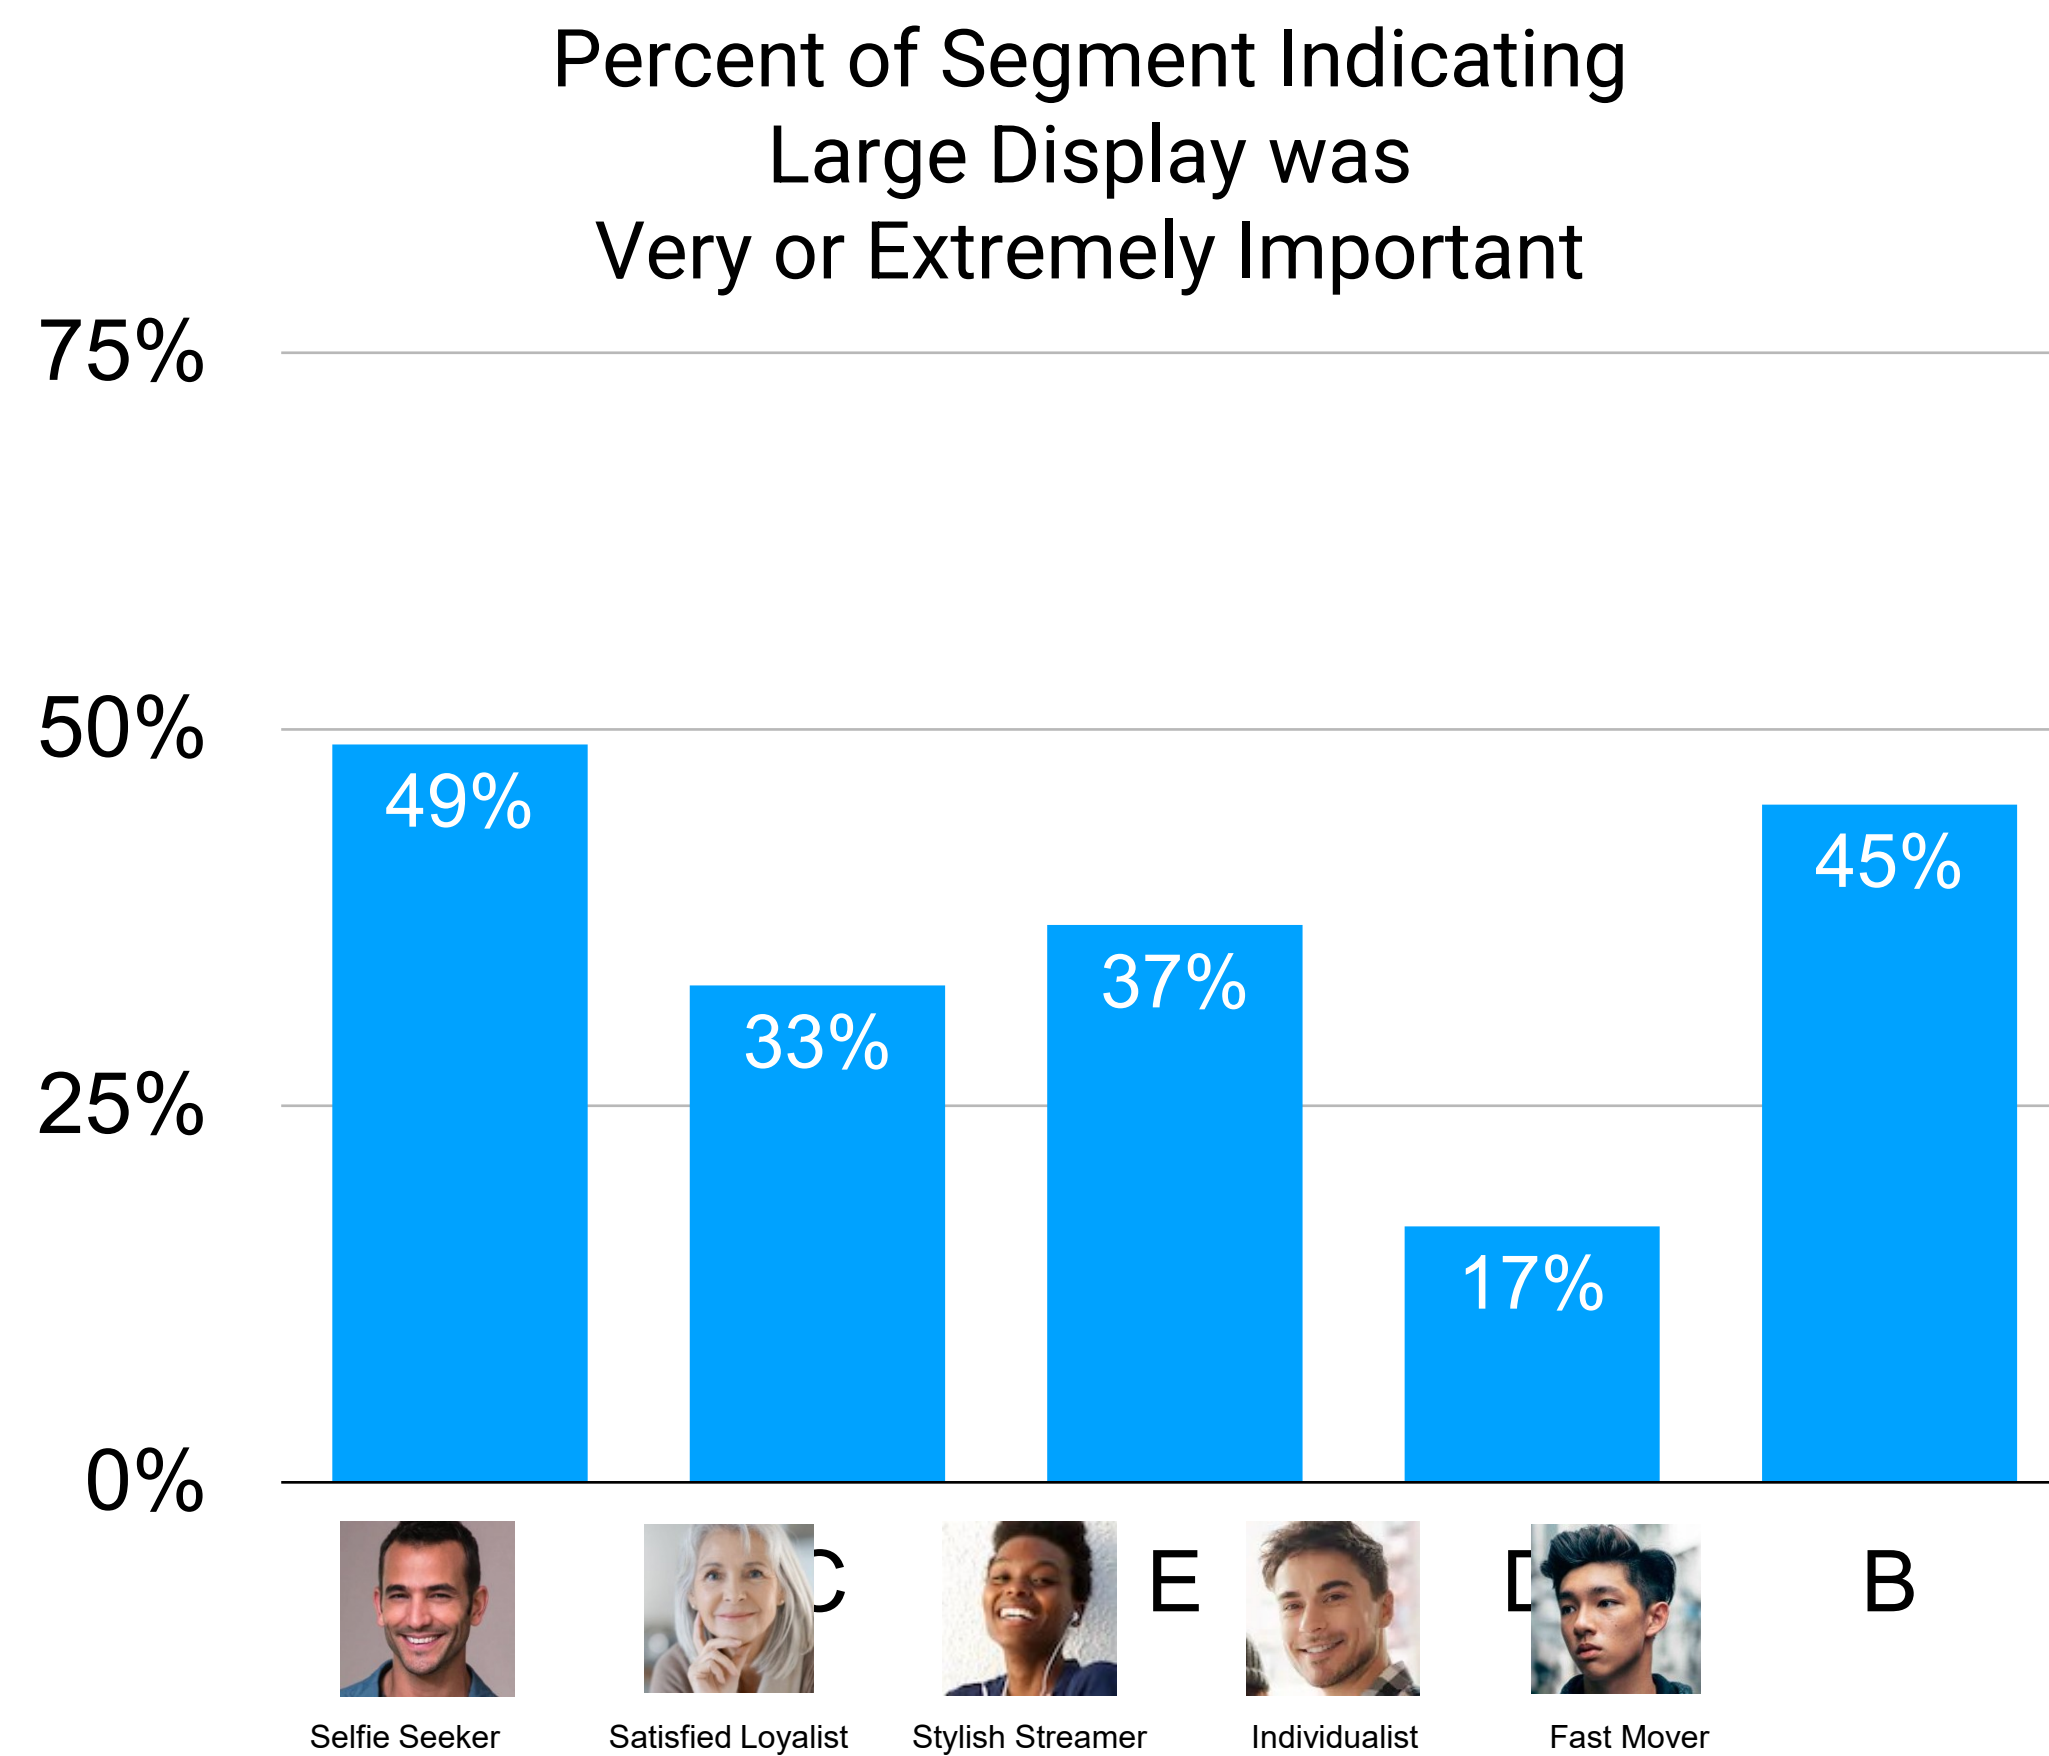

32% of Stylish Streamers have yearly income of less than \$50,000, the lowest income of any segment, yet they value their phones enough to pay more.

However, they don't necessarily shop for premium brands in general.

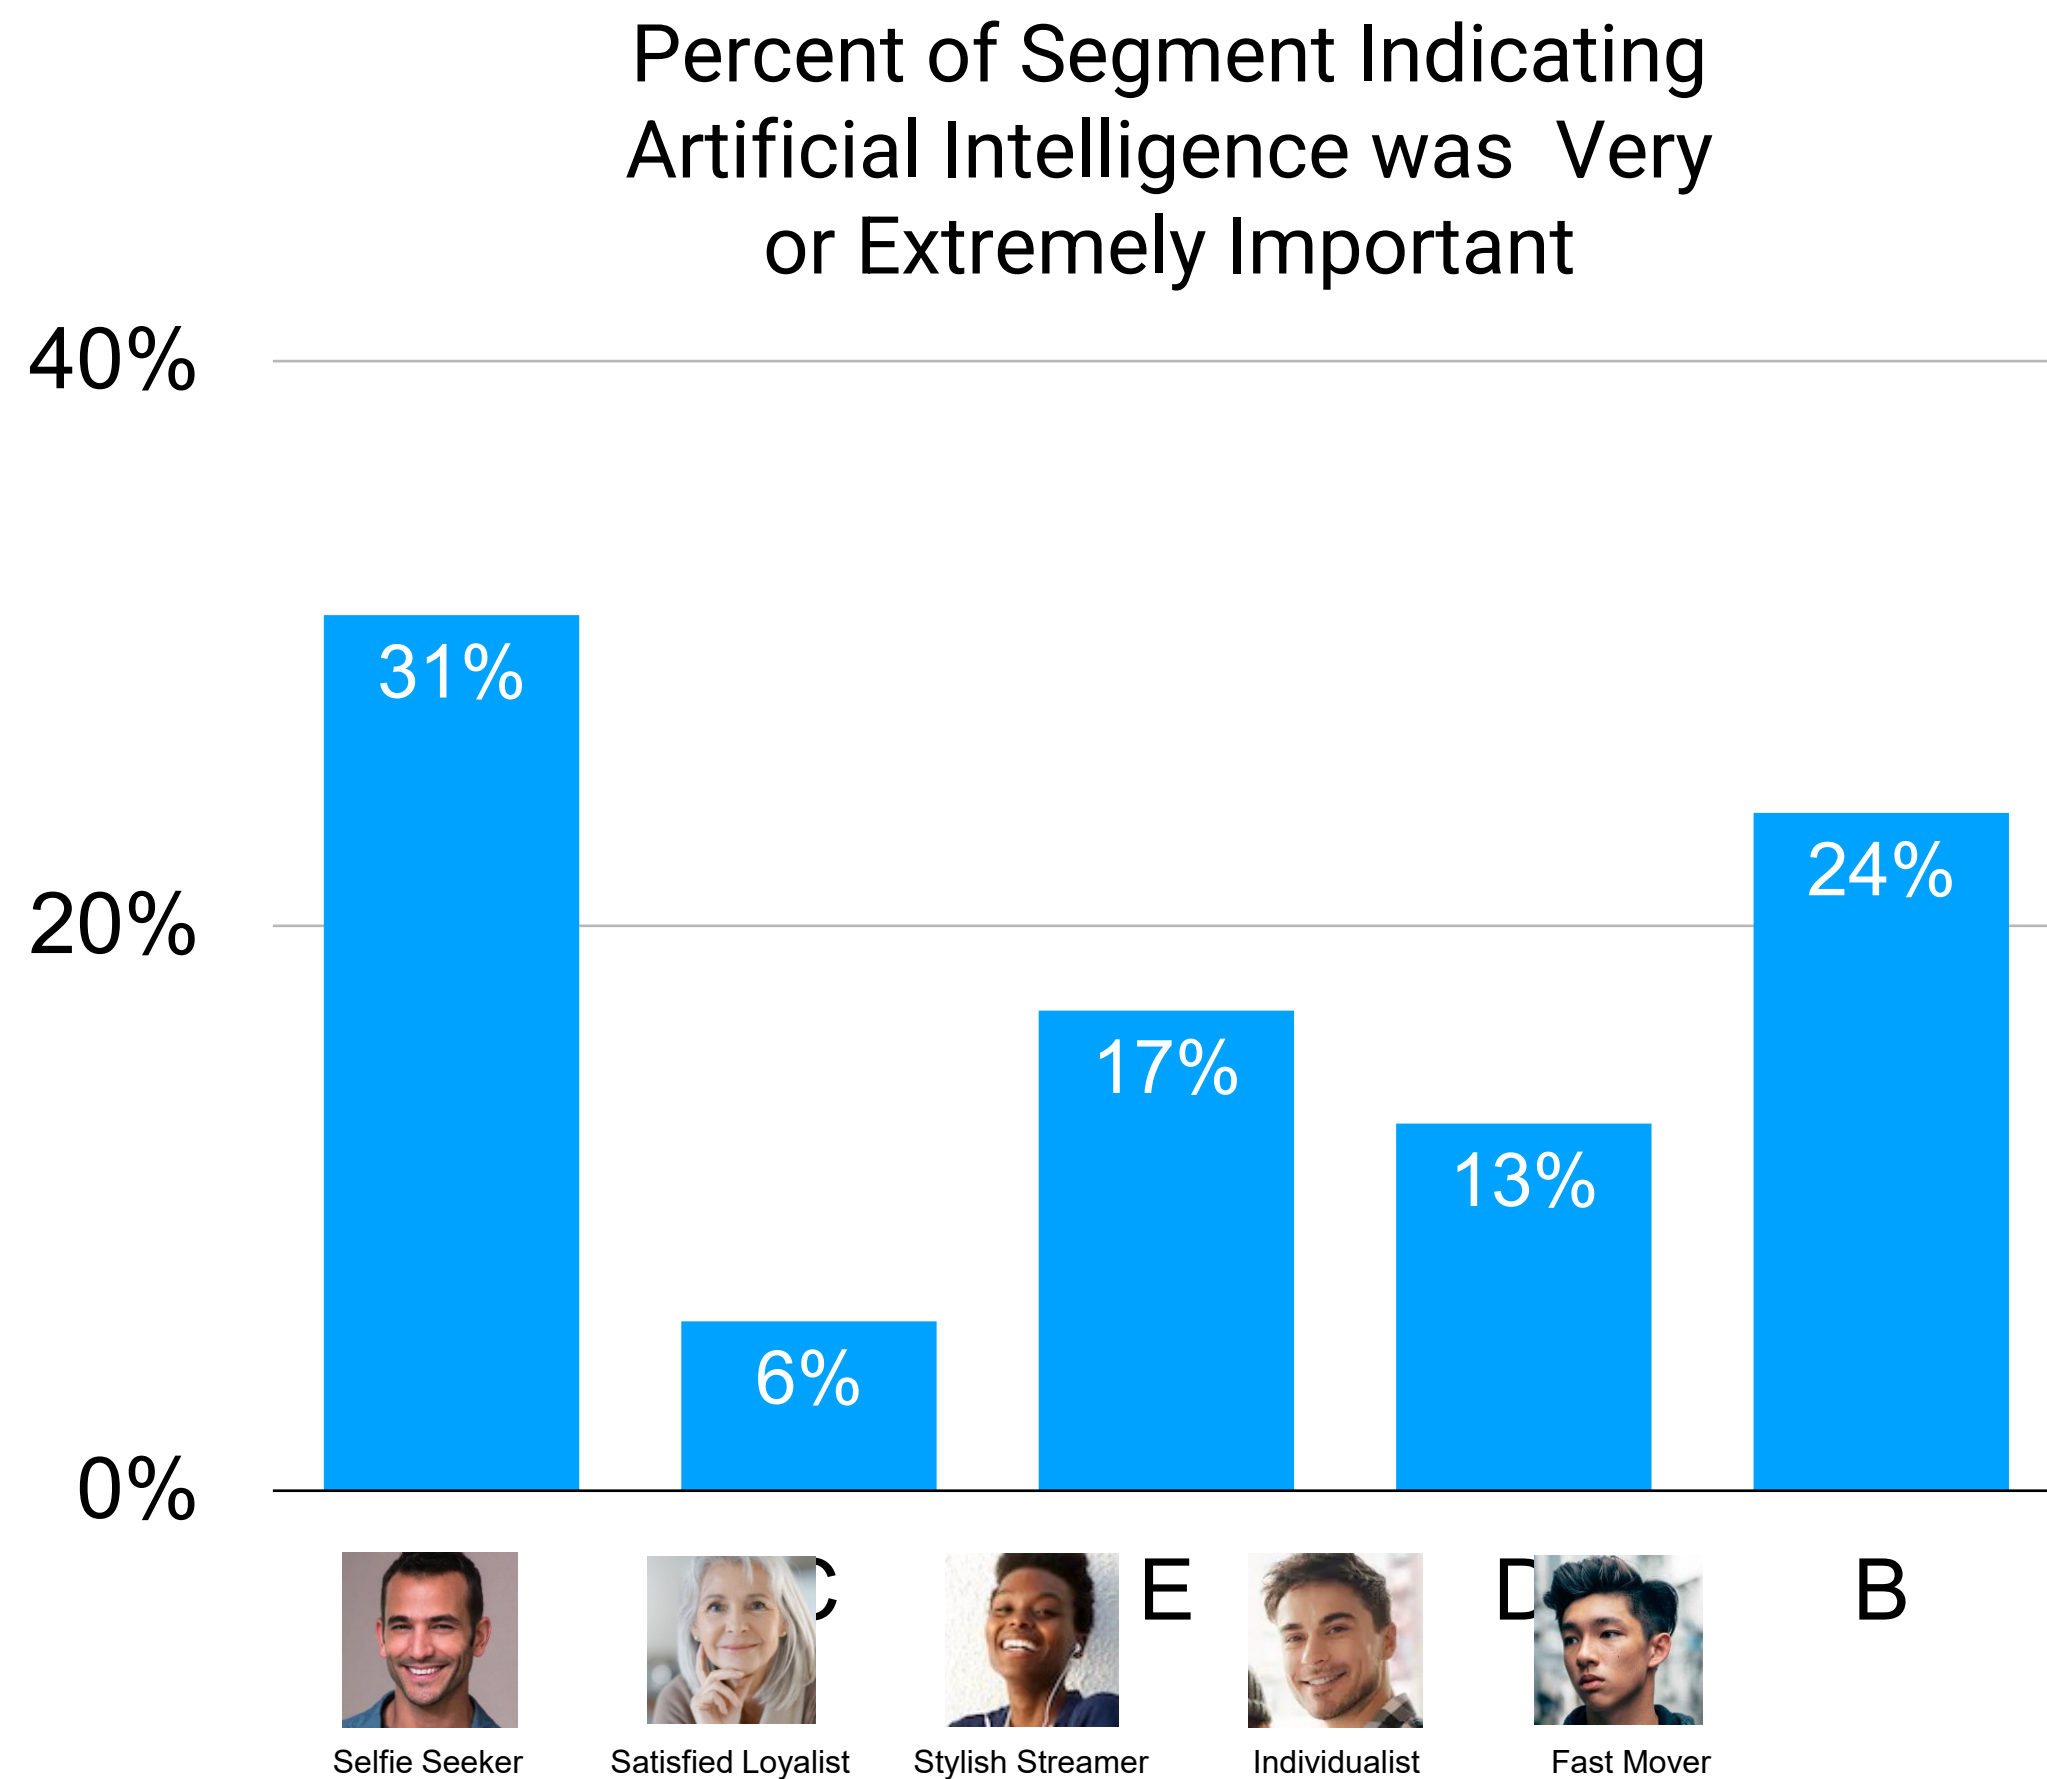

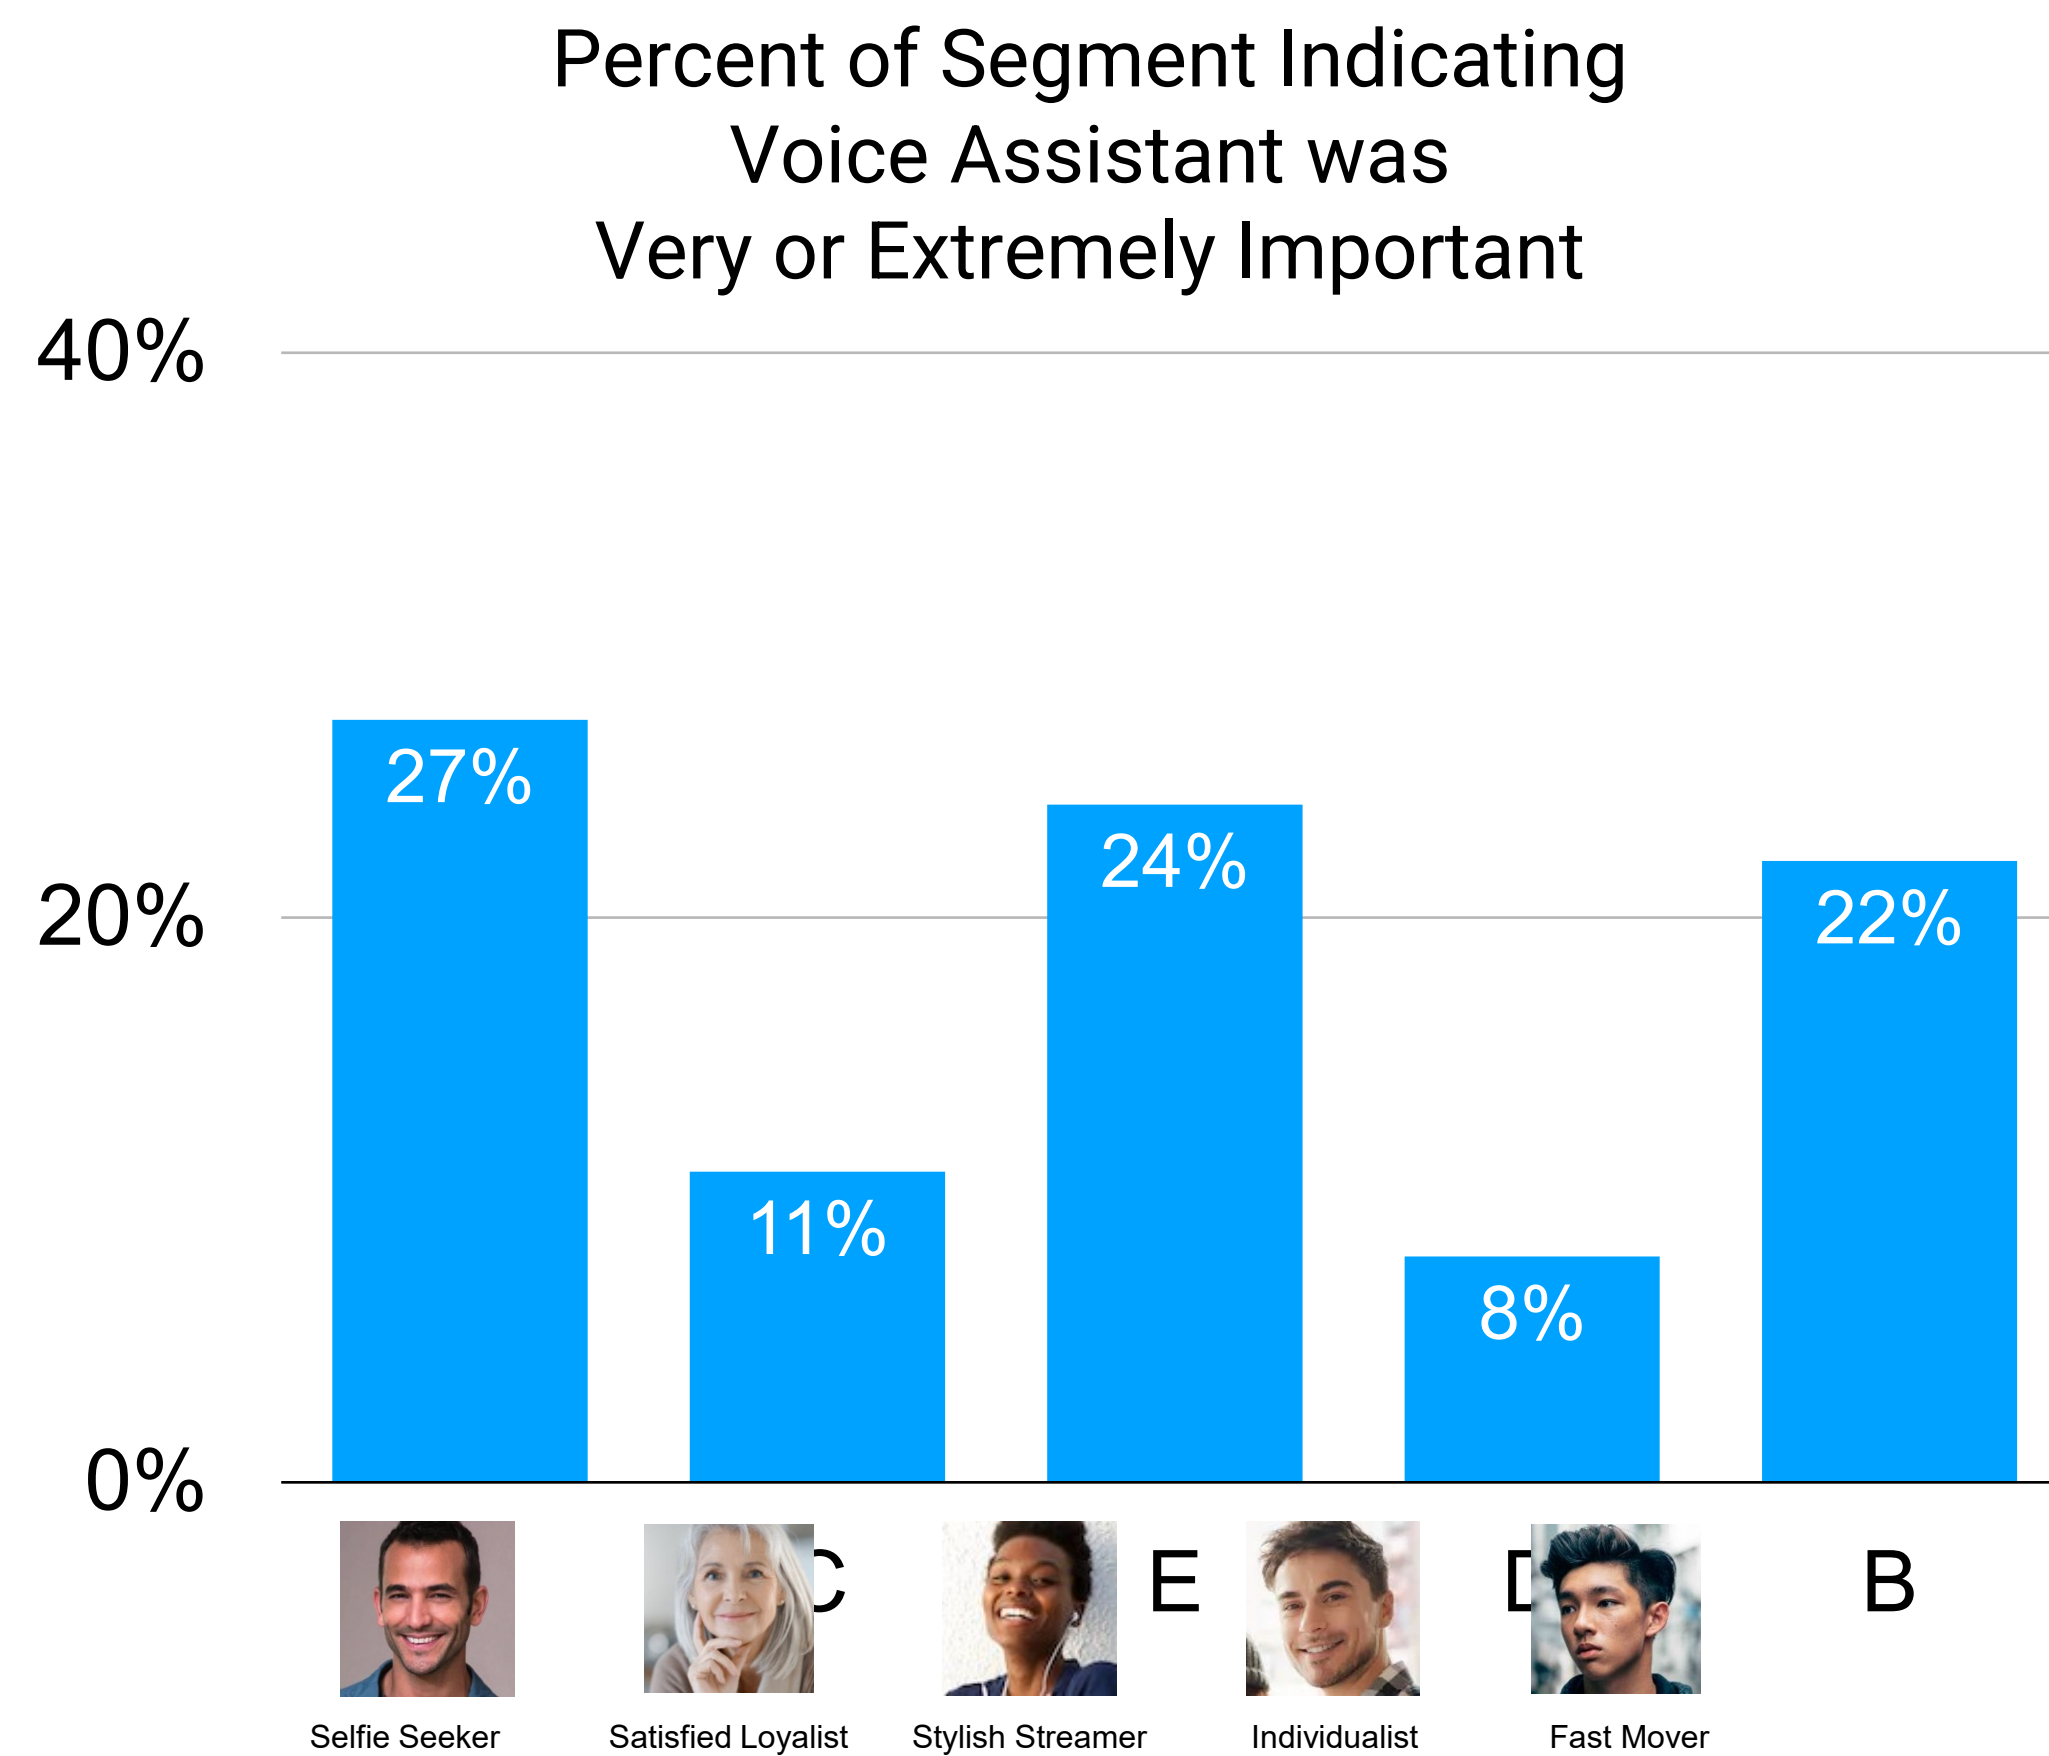

Segment comparisons: Importance of screens

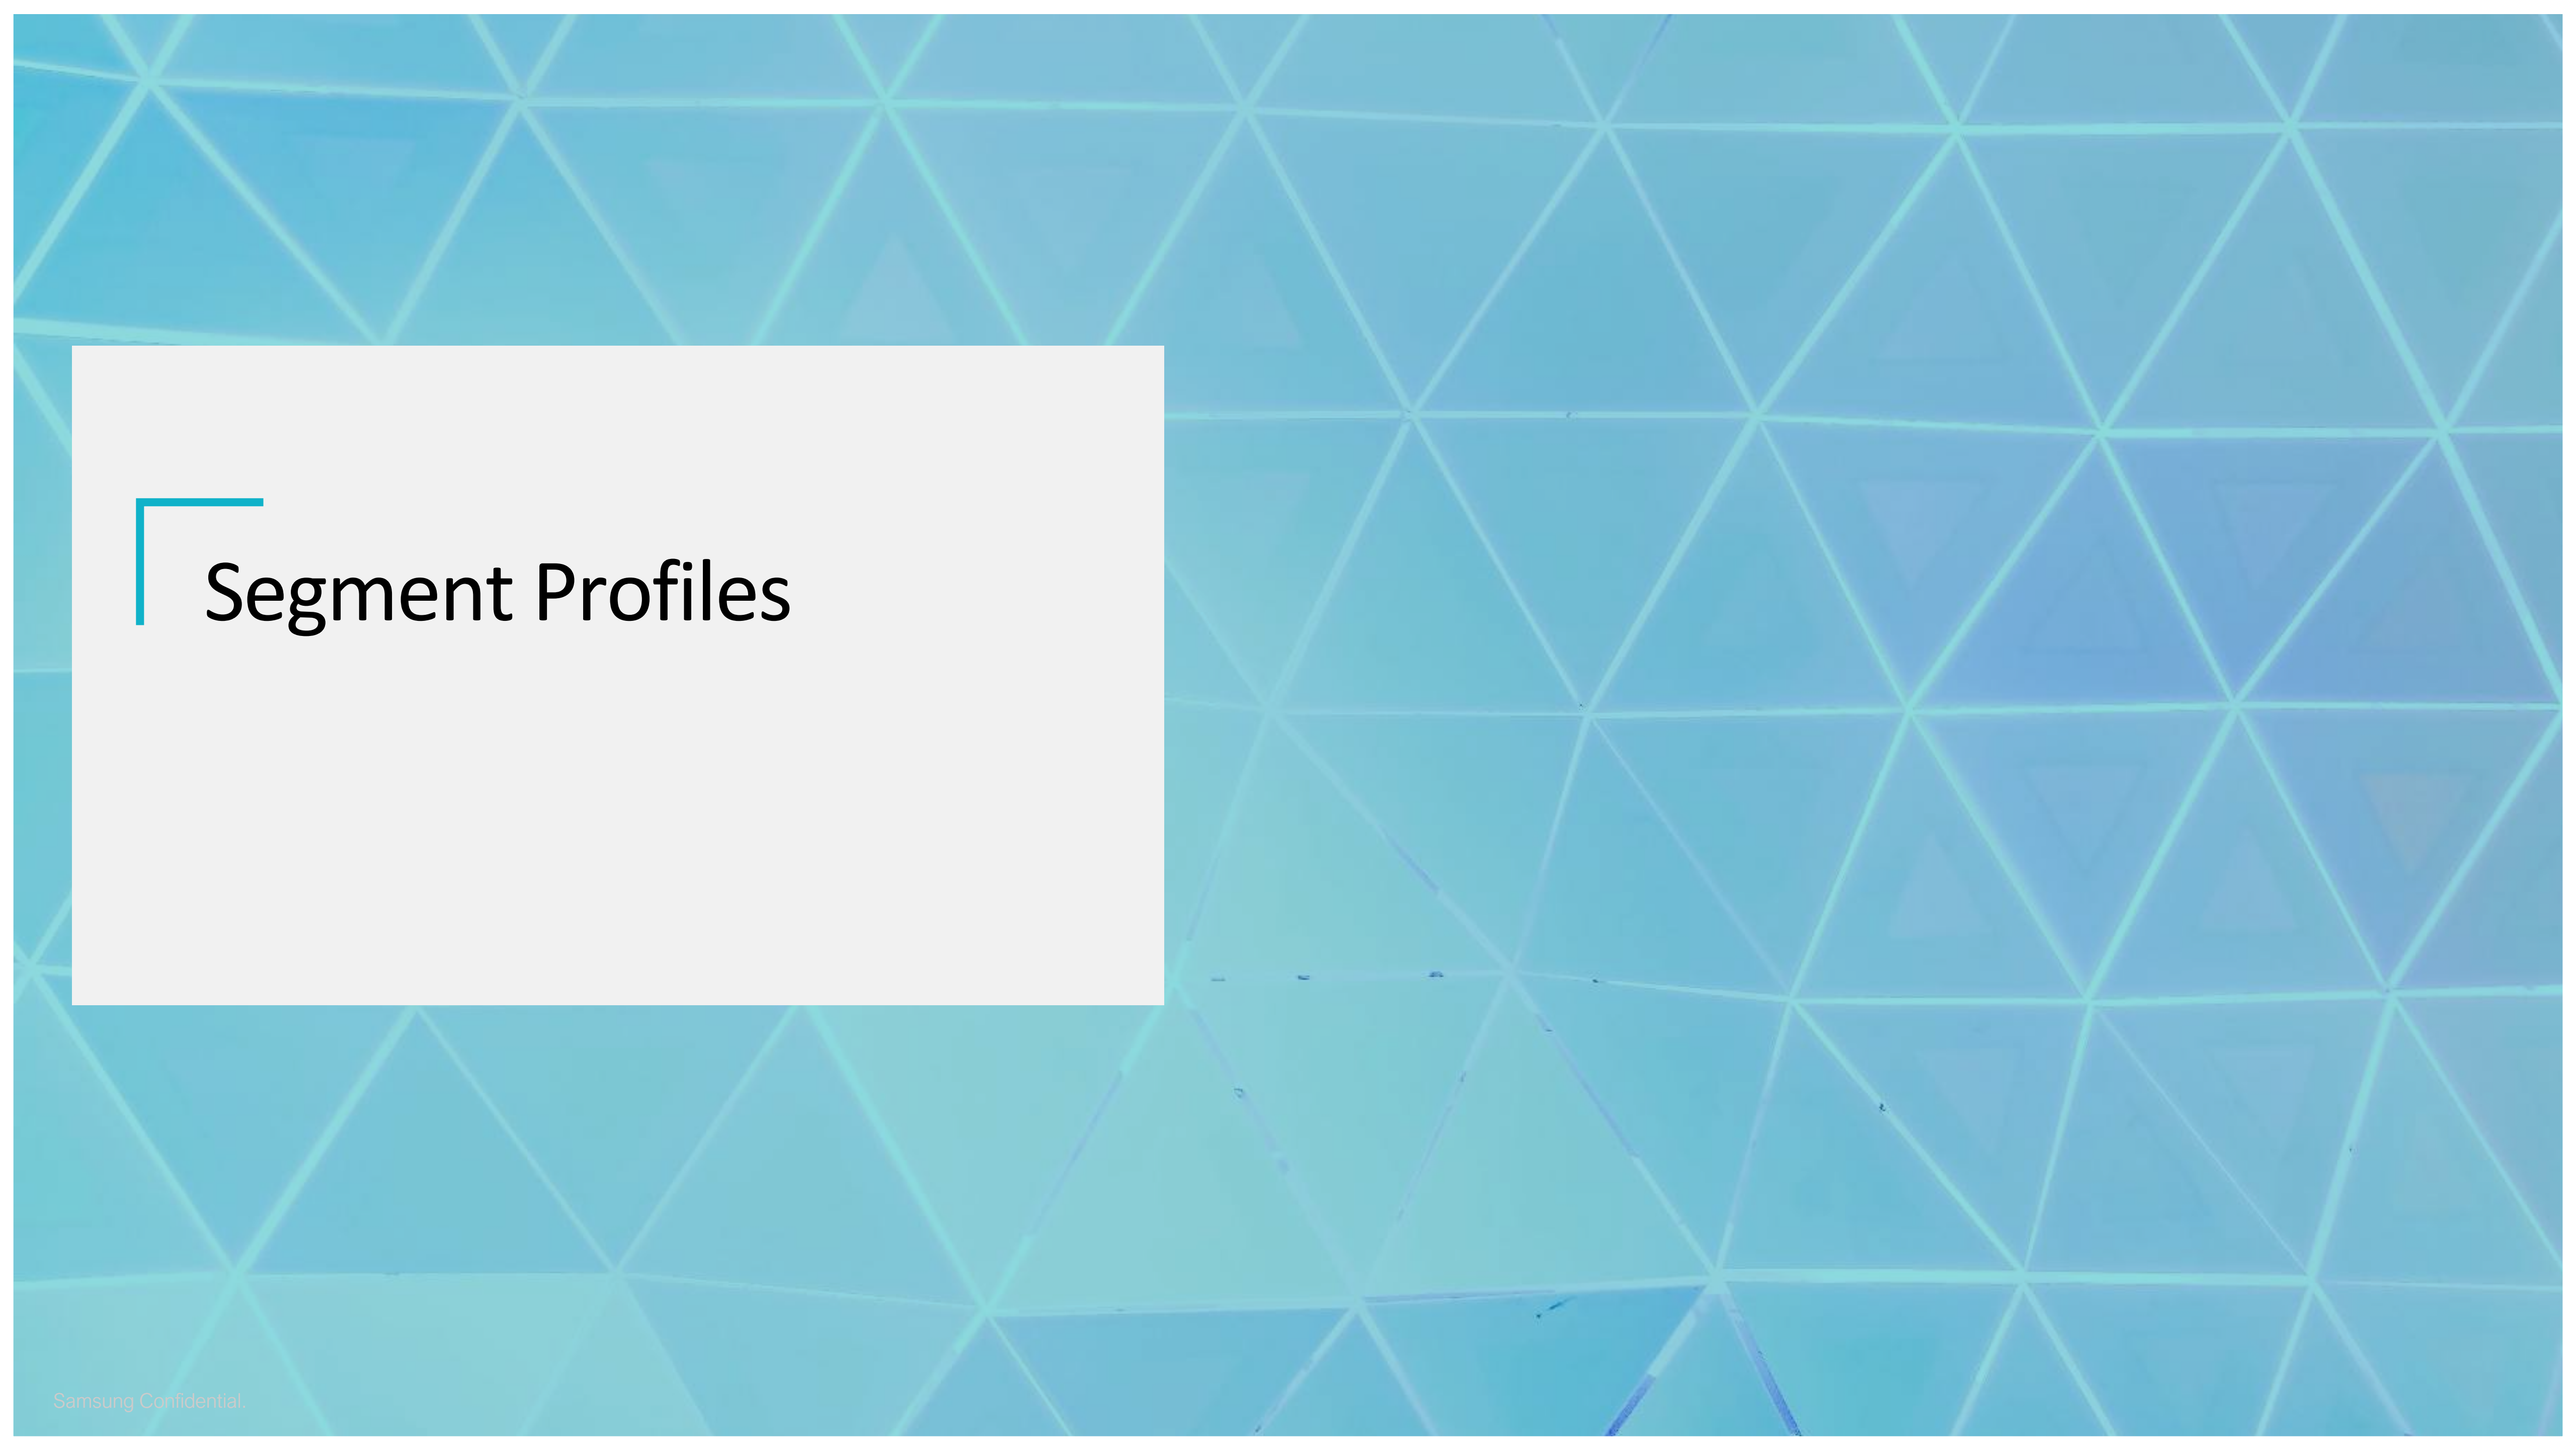

Selfie Seekers & Fast Movers want large displays and folding screens.

Segment comparisons: Importance of voice & AI

Selfie Seekers value Voice Assistant and AI. Fast Movers are high on both Voice Assistant and Artificial Intelligence.

Segment Profiles

The Selfie Seeker

27%
of respondents

This segment wants it all. They are disproportionately high on most of the features. By far, they have the heaviest camera usage, particularly for selfies. They respond significantly higher than other segments when it comes to behaviors on the phone, including:

- Taking selfies daily
- Video calling/chatting daily
- Taking pictures or video with rear camera
- Playing multi-player online games
- Streaming HD video
- Live streaming
- Using AR/VR

Buying Characteristics

- Brand loyal
- Willing to pay anything
- Want latest & greatest
- Refresh their phones often
- Attracted to luxury brands

Selfie Seeker's Interest in Trying New Tech Aligns with Fast Upgrade Cycle

Upgrade Cycle

How often do you purchase a new smartphone?

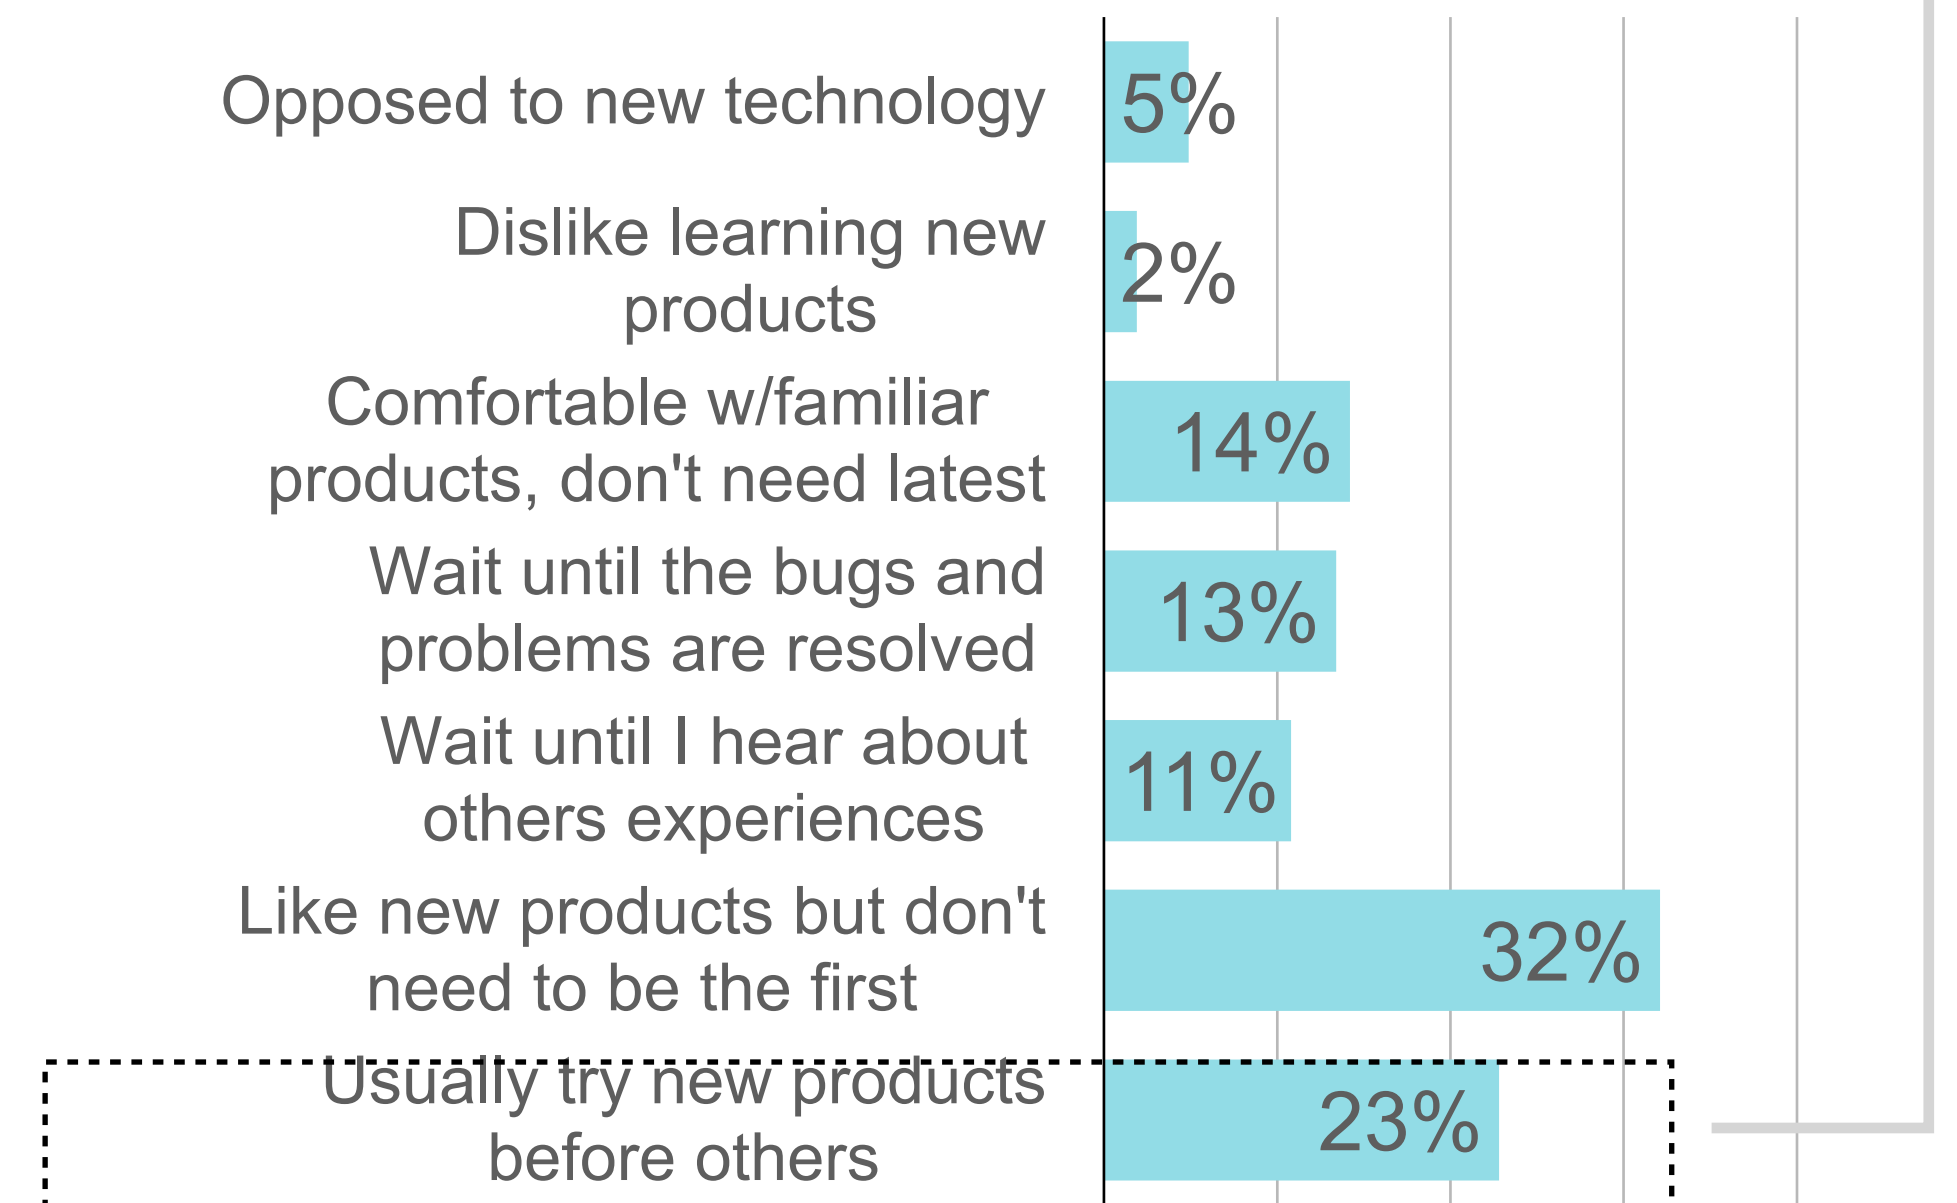

Have the Newest Phones

This group upgrades faster than any other segment, a full 5.6% faster than Stylish Streamers who also want the latest and greatest phone, and far from Satisfied Loyalists with the slowest upgrade cycle at 12.7%.

Tech Adoption

Which of the statements best describes you when it comes to purchasing new technology?

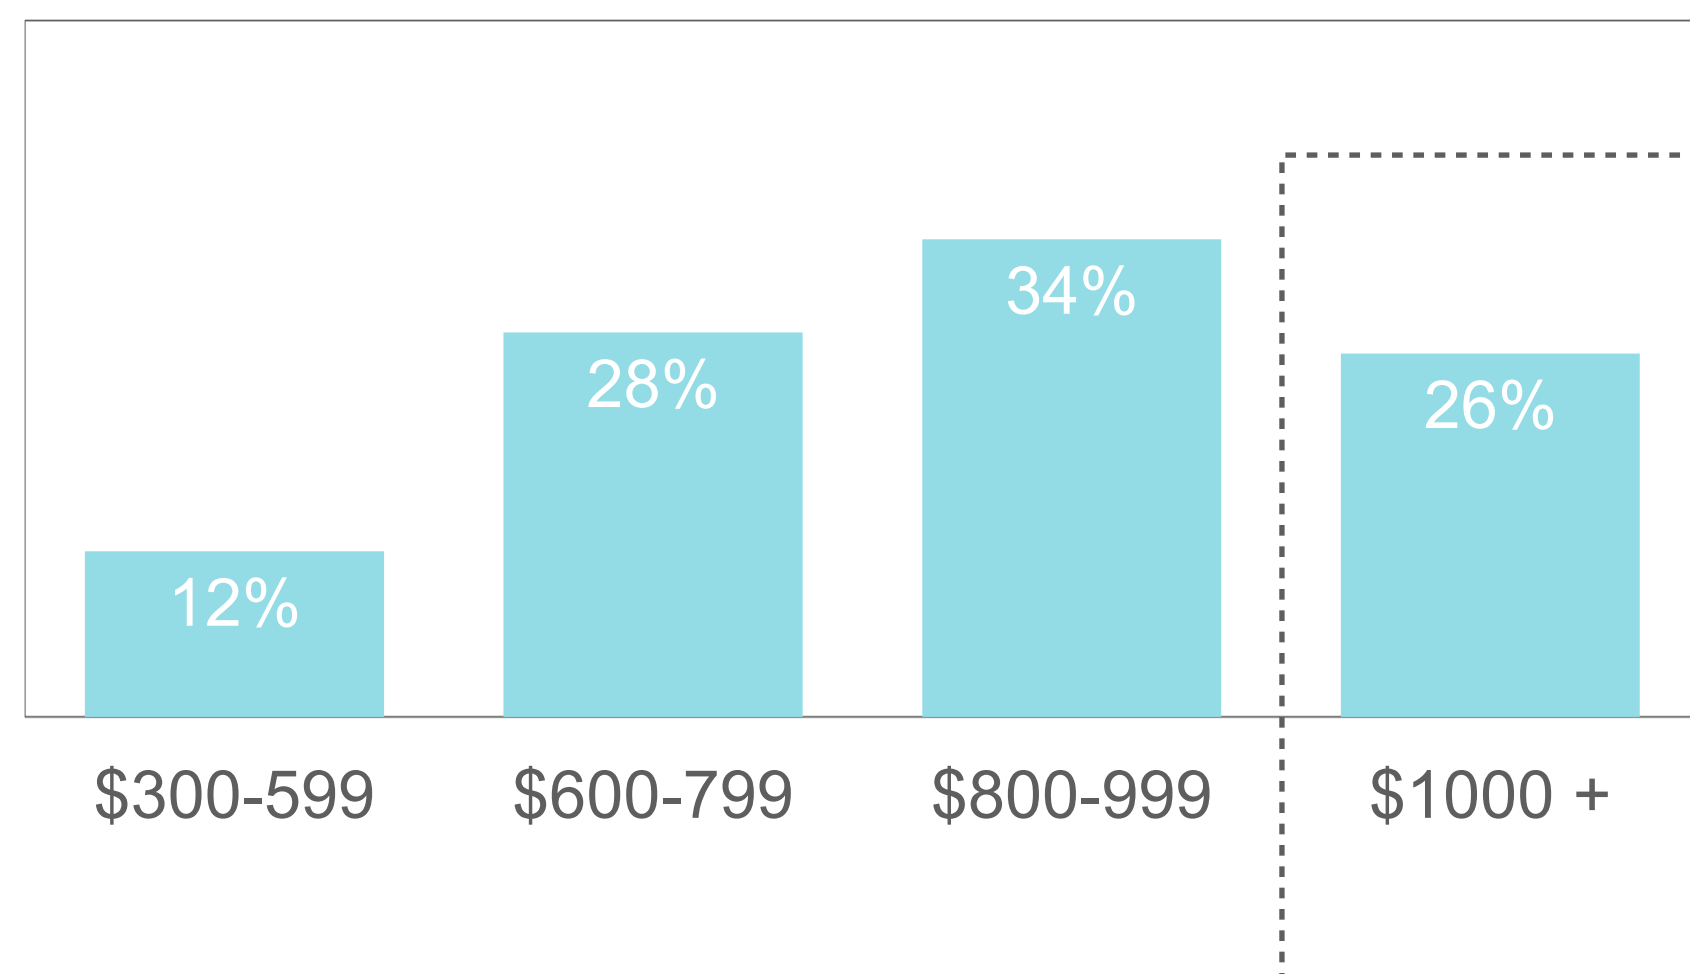

Ahead of the Pack

At 23%, Selfie Seekers significantly high on adoption of new technology compared to other segments. With Individualists on the low end at 7.8% and Stylish Streamers at next highest at 17.4%.

Selfie Seekers Are Willing to Buy Expensive Phones

Cost of Current Phone

How much was the full retail price of your current phone?

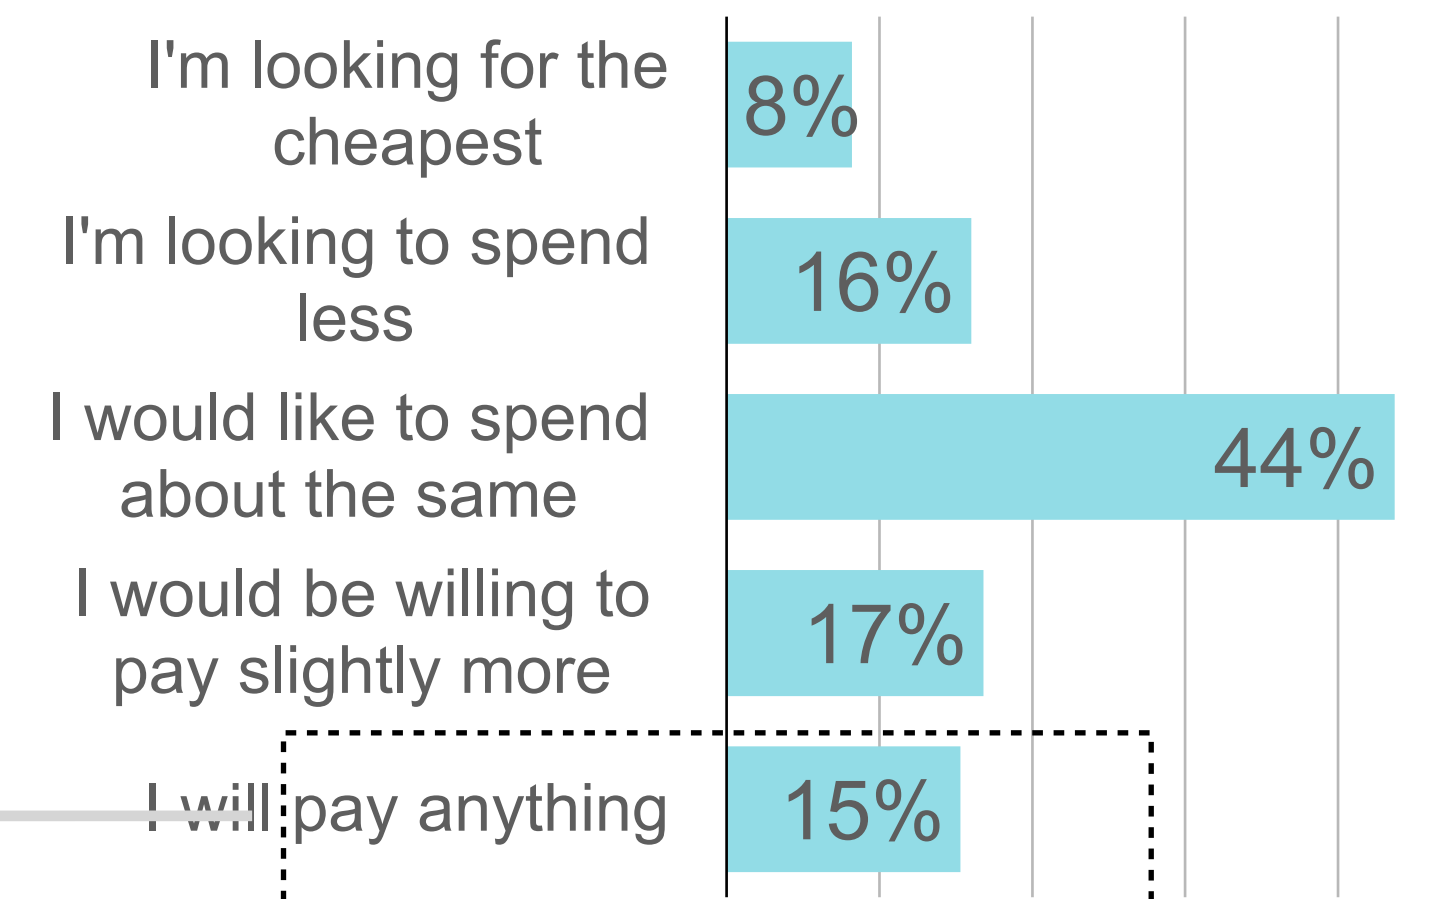

Big Spenders

Given the size of the sample, Selfie Seekers spent significantly more money on their current phone. (Notable: 60.4% spent \$800 or more.)

Price Sensitivity

Considering current phone cost, when shopping for your next smartphone, what are you likely to spend?

Willing to Invest

Along with Stylish Streamers, Selfie Seekers are the most willing to pay anything for the phone that they desire.

Selfie Seekers “Want It All”

This is a high-use, high-features segment of people who use their phones for both work and play. Generally, as a group, they rate high in most features but differences appear between Apple and Samsung users.

Samsung users in this segment are significantly more interested than Apple users in:

- Large display
- Premium audio
- Huge internal storage
- Expandable memory/micro SD

Apple users in this segment are significantly more interested than Samsung users in:

- **Folding screen (see next slide)**
- High performance gaming
- Rear camera
- Voice assistant
- Face recognition
- Cloud service for media
- Fitness and gaming apps (high interest)
- In-display fingerprint (Note: other Android also expressed high desire for this feature)

Selfie Seekers Demonstrate High Brand Loyalty, But Foldable Screen Is Opportunity to Disrupt

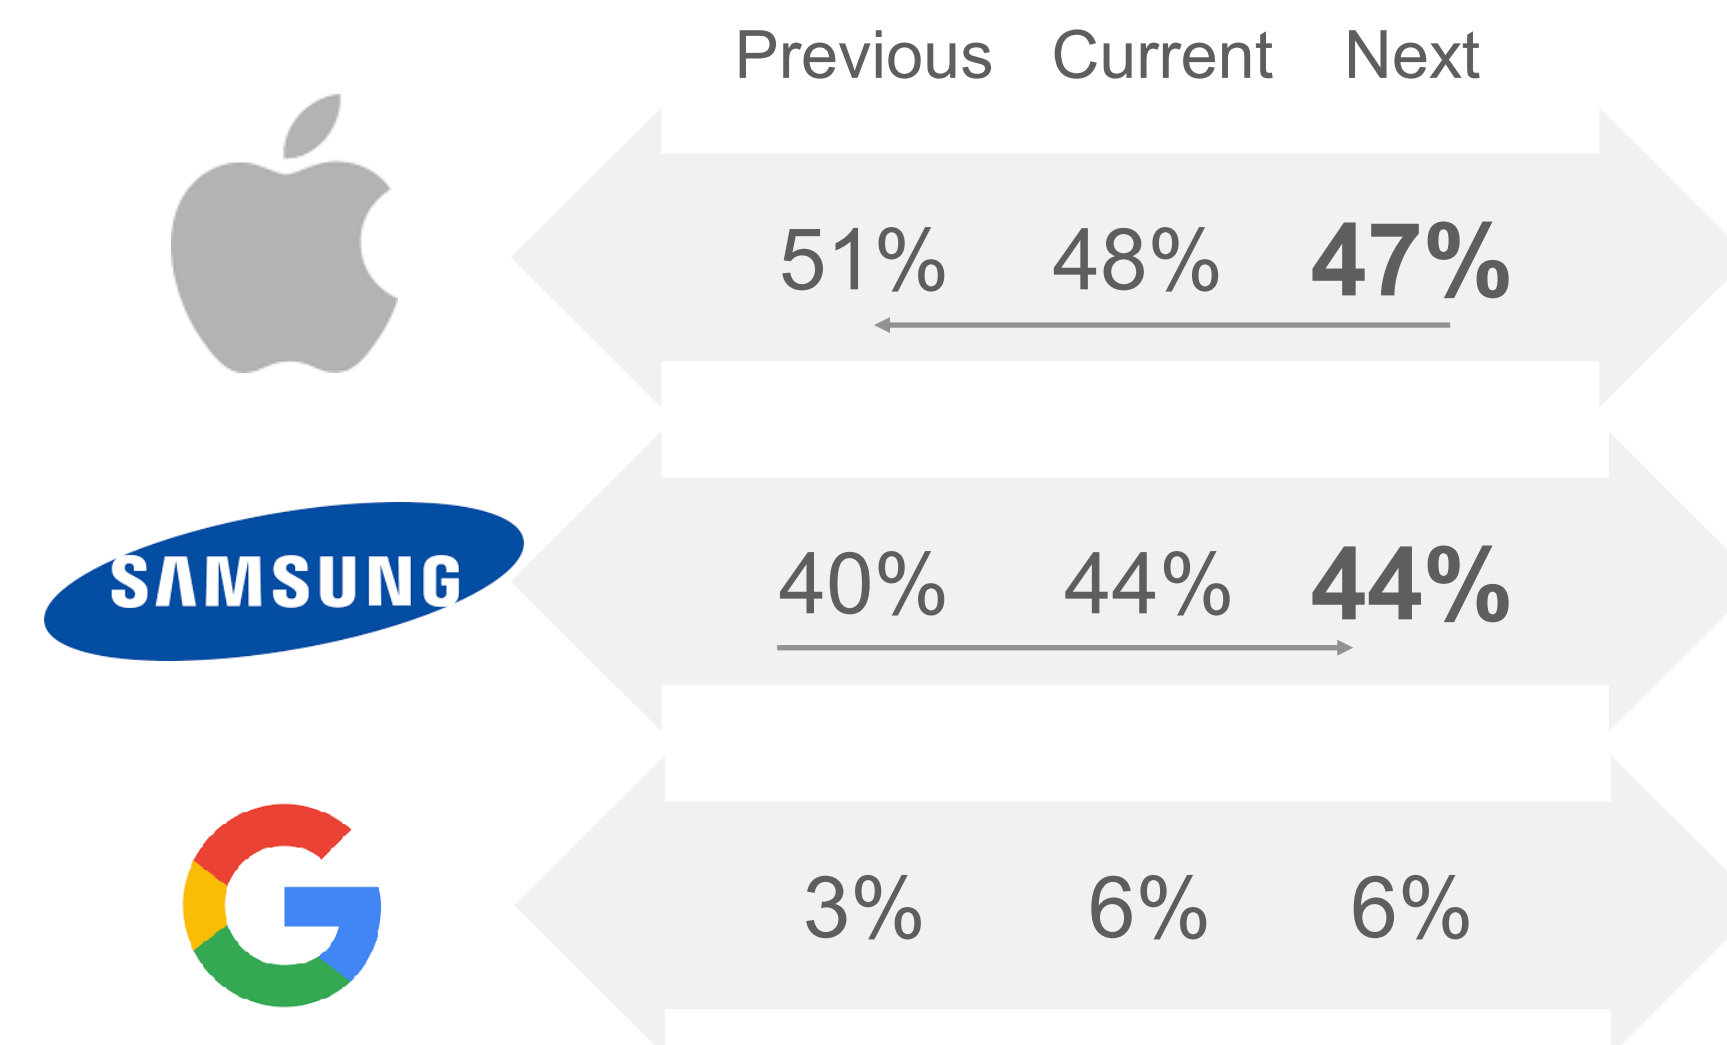

57% of Apple users in this segment are significantly highest of all “phone + segment” in desire for a foldable screen.

Foldable Screen Opportunity

For Selfie Seekers, both Apple and Samsung users are significantly interested in foldable screens, but Apple is significantly higher than Samsung. (36% of Samsung owners vs 57% of Apple owners in this segment)

Shifting from Apple to Samsung?

Standout Factors for Next Phone Purchase

- Apple users desire latest and greatest
- Samsung desire want curved screen

Selfie Seeker Apple Users Are More Interested in A Multi Device Experience

Apple users want their phones to be connected the following devices:

- Tablet
- Smartwatch
- Stereo/audio
- Smart Home
- Home Appliances
- Smart TVs

Connected Home Appliances

Apple users are disproportionately high in their interest to connect their phones to home appliances and their smart TVs.

Samsung users want their phones to be connected to the following devices:

- Security system
- PC/Mac

Computer Connection

Samsung users in this segment rate *significantly* high in their desire to connect to their PC/MAC and are the only segment to have significant interest in computer connectivity.

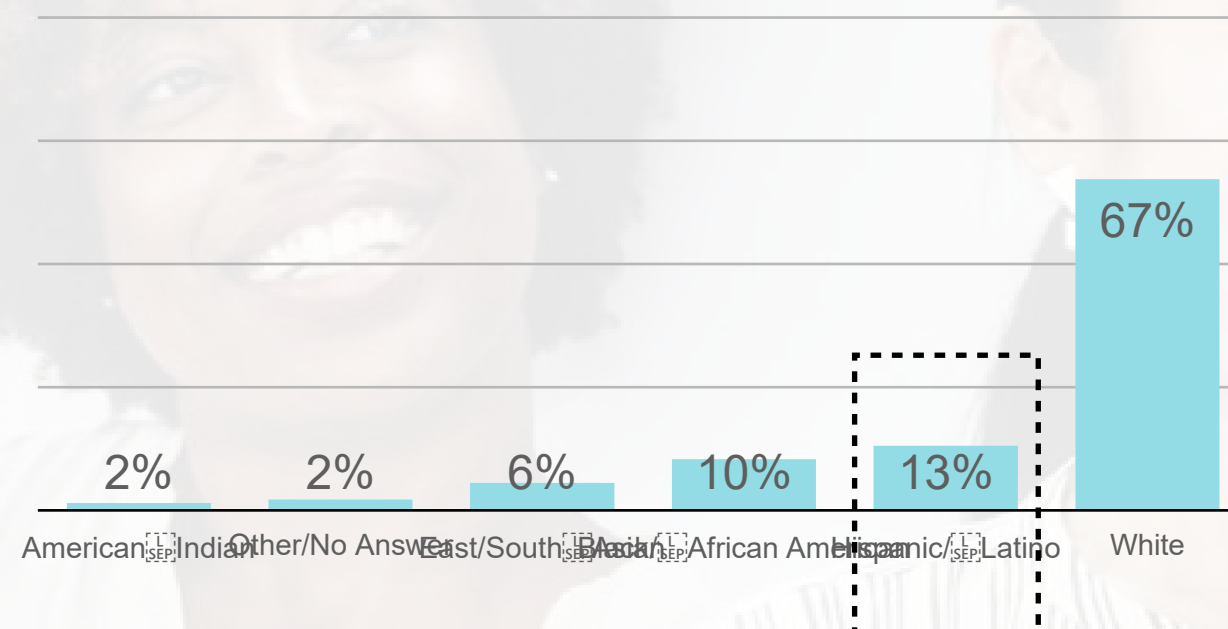

Selfie Seekers

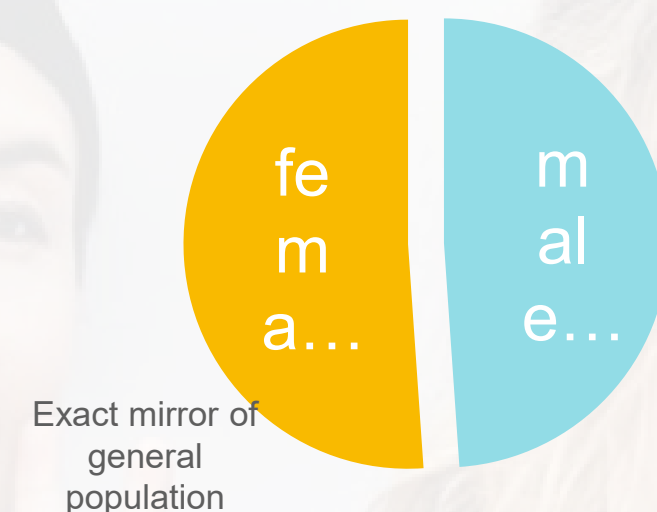

General Demographic Data (n = 268)

Differentiated

Race

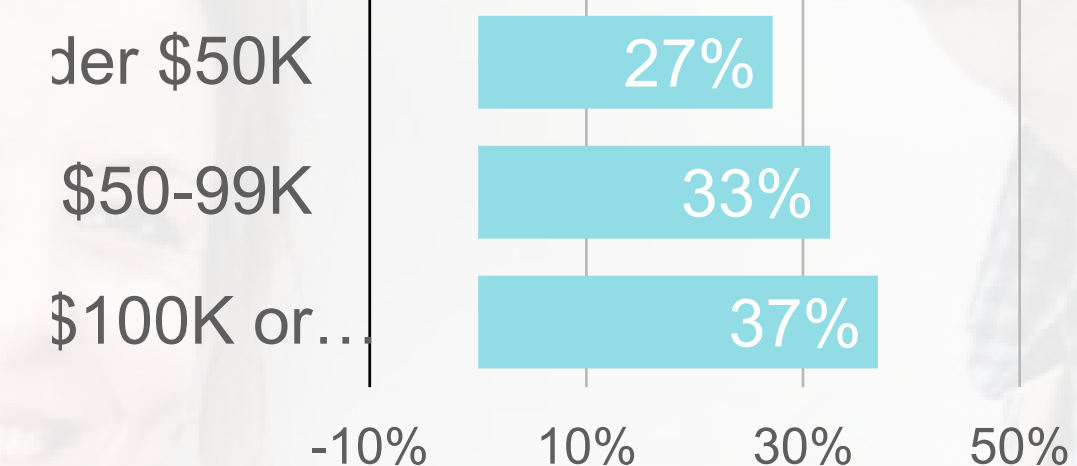

Gender

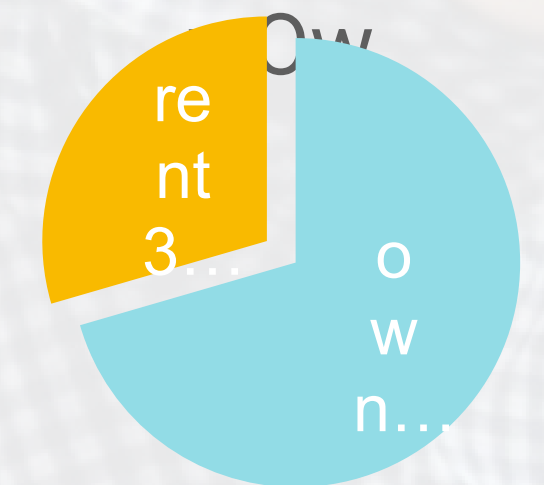

Undifferentiated

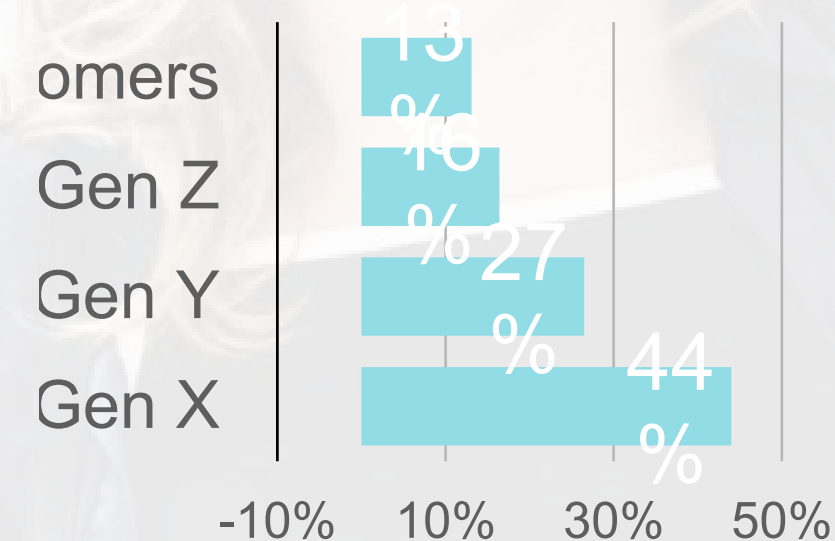

Income

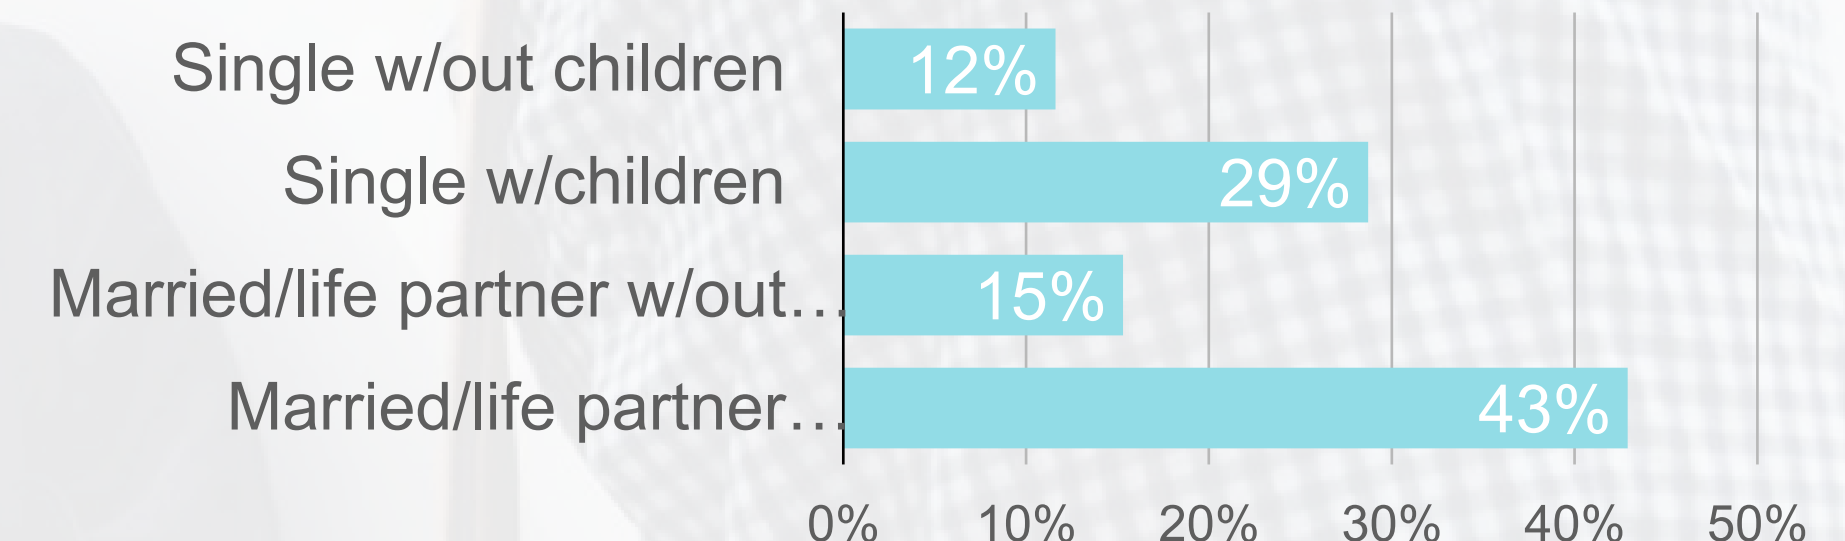

Rent

Generation

Household

The Satisfied Loyalist

27%
of respondents

With their high income, this segment has the ability to have the latest and greatest phones — yet they tend to be satisfied with what the brands and phones they have. They are slow to adopt new technology and moderate in their spending, though they are willing to spend a lot on phones. In general, they are attracted to luxury brands and are disproportionately high on an affinity to Apple.

This segment is differentiated in many demographic categories of the study and is more likely than other segments to be:

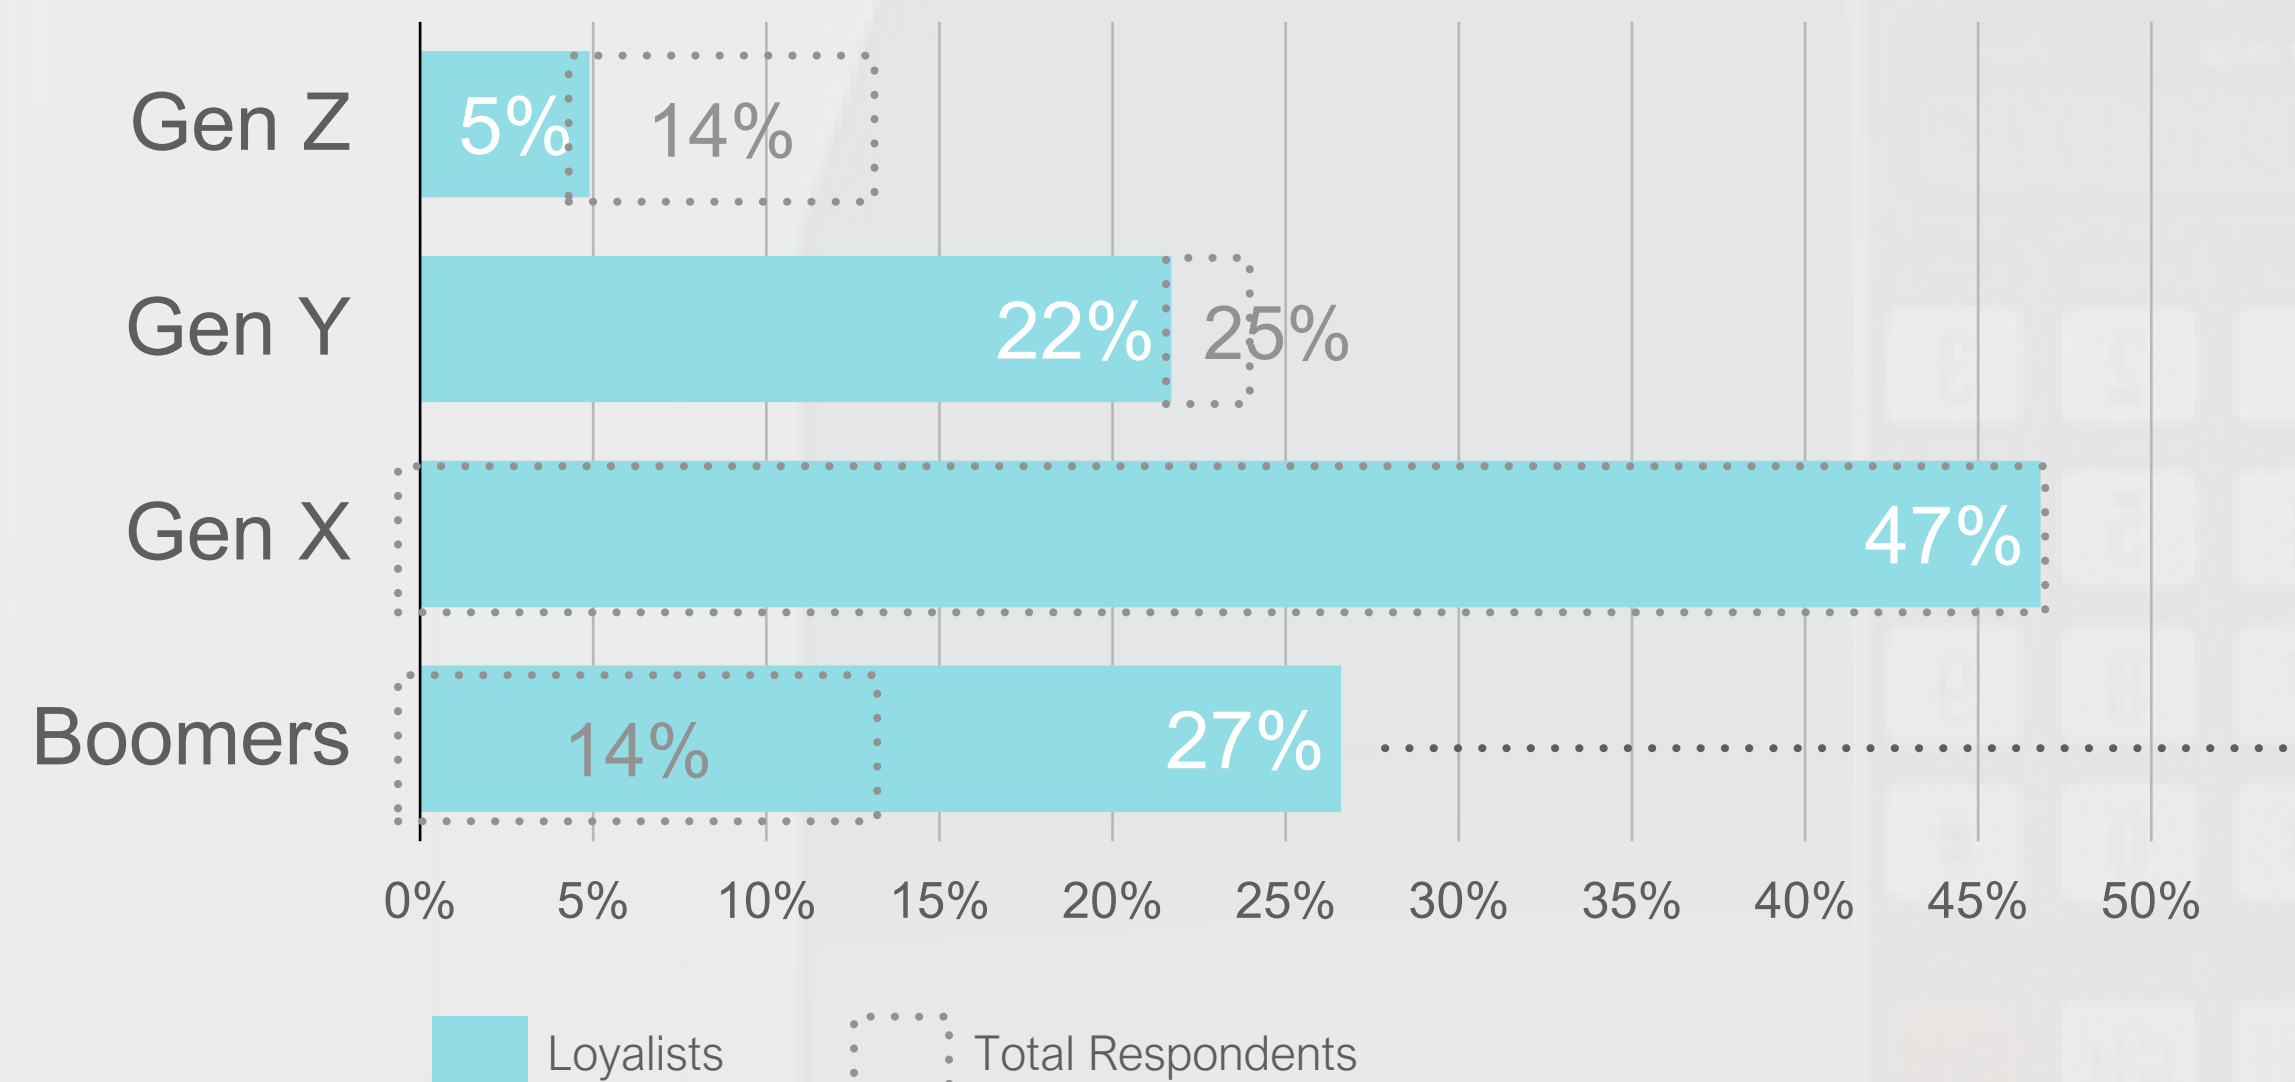

- White
- Women
- Married
- Older / retired
- Have high income
- Own their home

Notable Behaviors:

- Daily communicators
- Frequent social media
- Selfie camera least important

Satisfied Loyalists Are Disproportionally Baby Boomers

The Boomers were the first to have grown up with TVs and mass marketing and the first adopters of wireless phones. They identified with their careers and purchasing power. They are of the largest generational group tied with millennials in size in overall U.S. population.

Baby Boomers are disproportionately high in this segment over any other segment.

Satisfied Loyalists Are Slow to Adopt New Tech And Upgrade Their Phones

Upgrade Cycle

How often do you purchase a new smartphone?

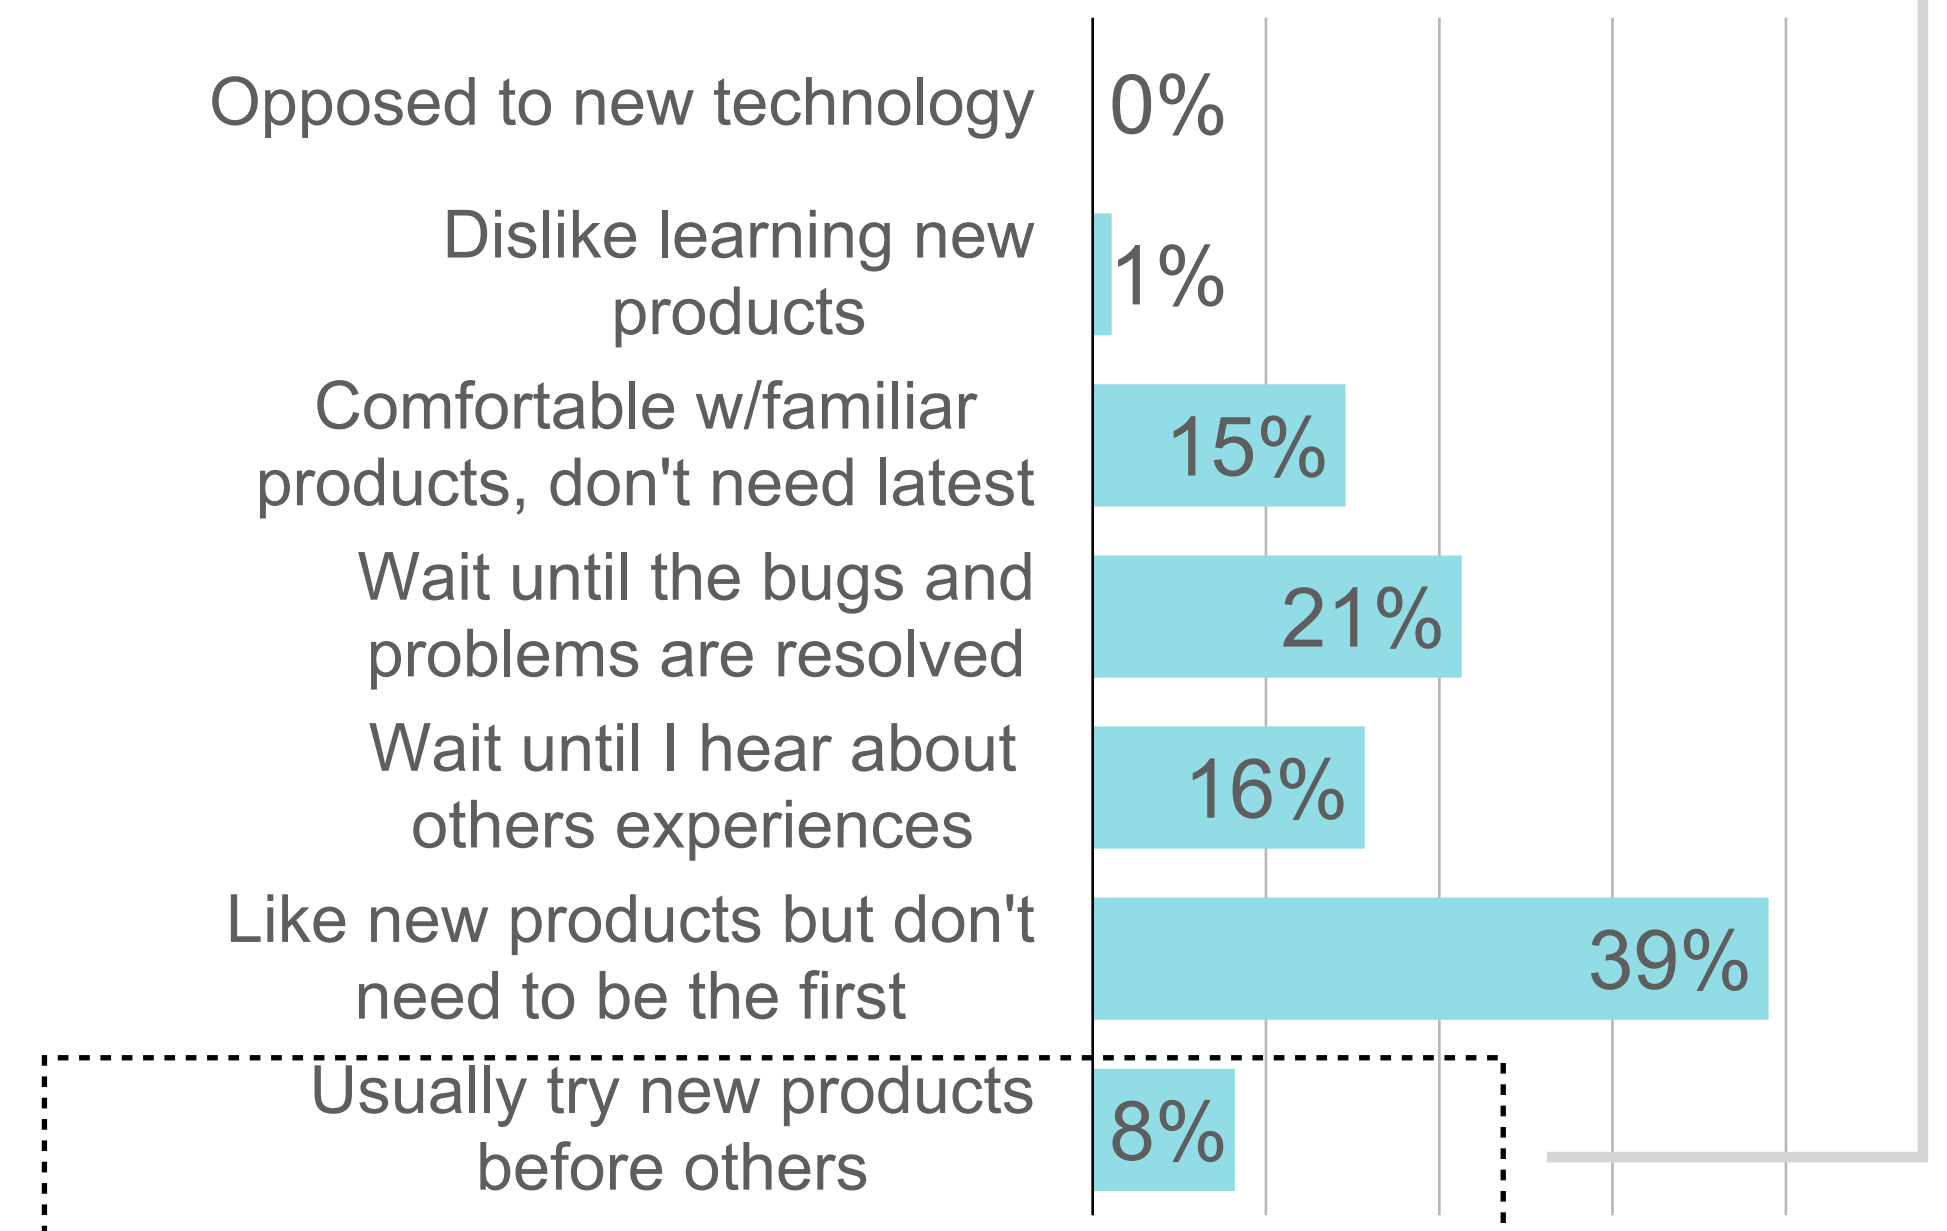

Long Term Investment

This segment keeps current phones longer than any other segment.

Tech Adoption

Which of the statements best describes you when it comes to purchasing new technology?

Conservative about Adoption

Though this segment enjoys having new products, they report significantly lower interest in trying new products than other segments.

Satisfied Loyalists Are Willing to Spend a Lot On Phones but Are Conservative About Price

Do Not Need a Bargain

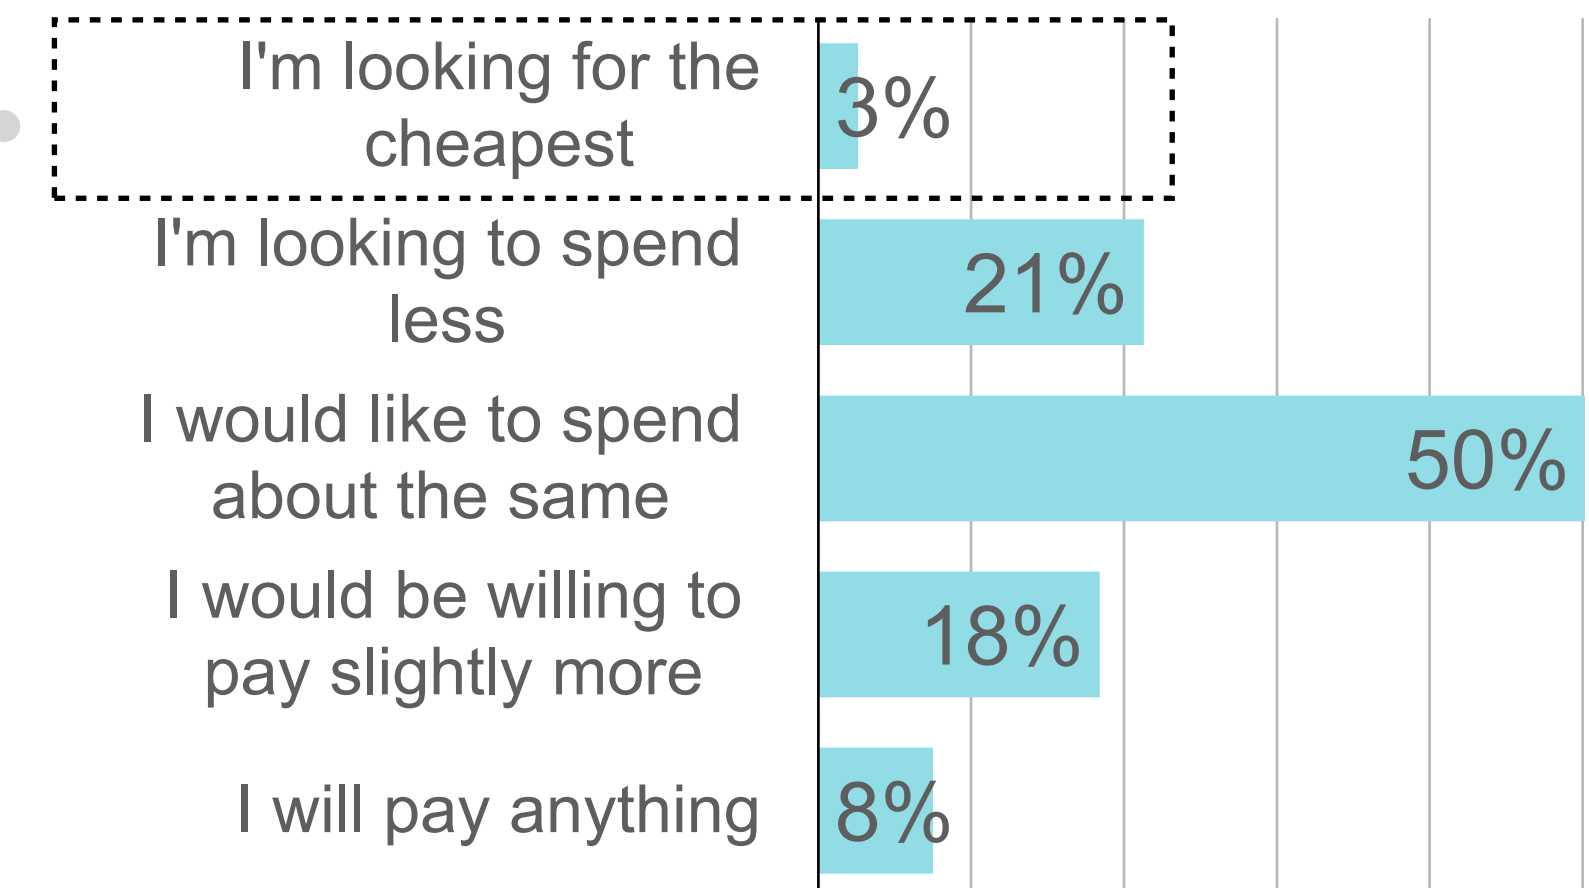

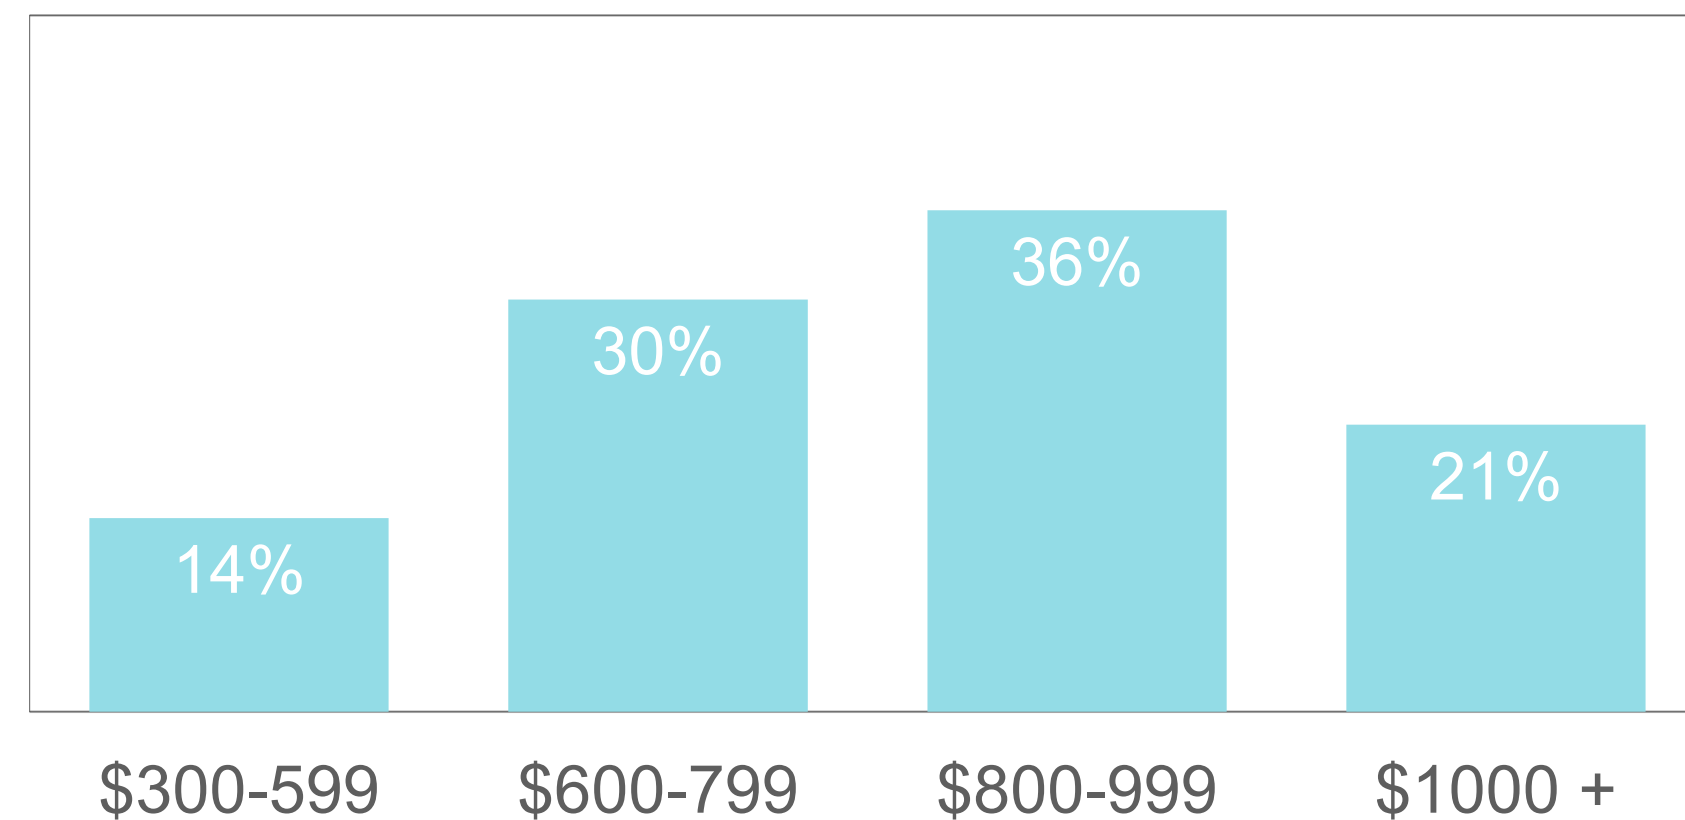

Given that they have the highest incomes of all the segments, it is not surprising that they are disproportionally low in looking for the cheapest phones.

Price Sensitivity

Considering current phone cost, when shopping for your next smartphone, what are you likely to spend?

Cost of Current Phone

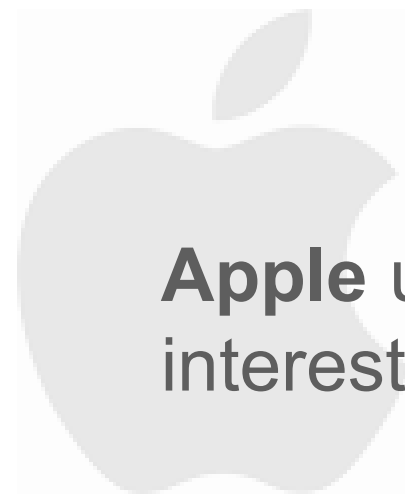

How much was the full retail price of your current phone?

Satisfied Loyalists Are Less Likely to Be Convinced To Change Phones than Other Segments

Brand Loyalty

Satisfied Loyalists remain steady in their brand ownership. Both Apple and Samsung users desire a well-known brand they can trust. With the release of the Pixel, they moved to higher Pixel ownership on par with rest of survey population.

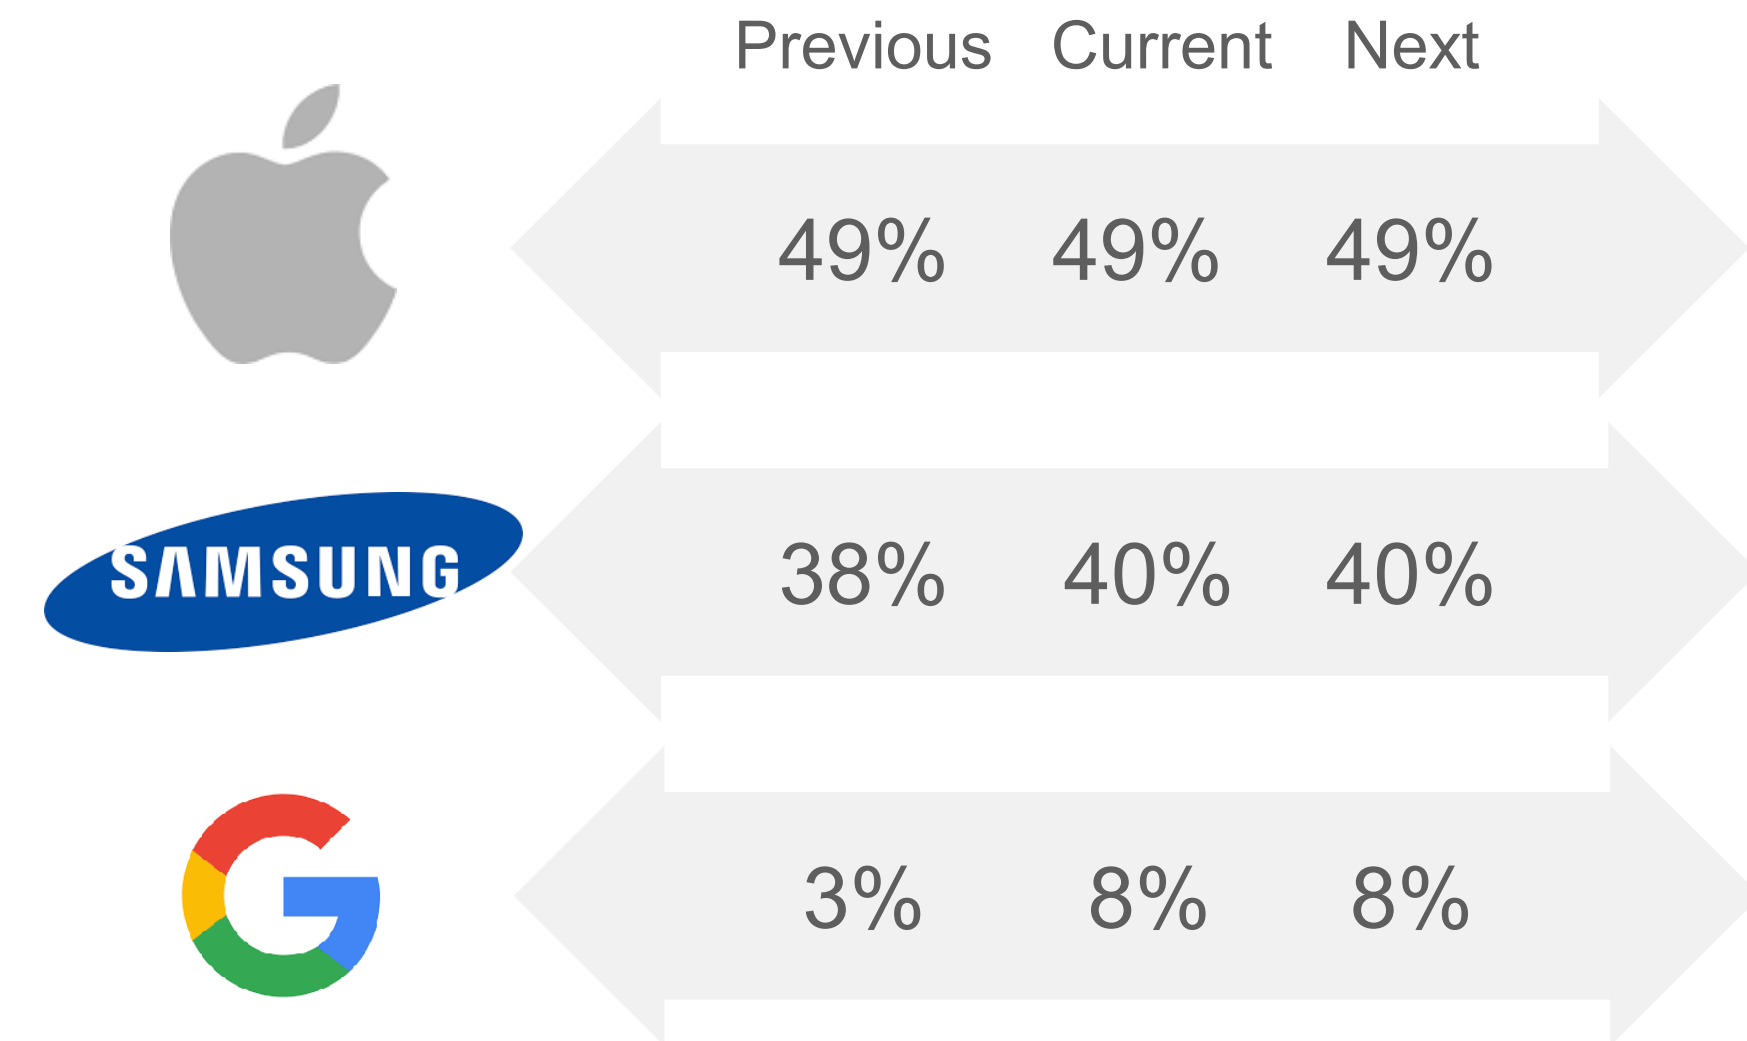

Apple users are significantly more interested in Samsung users in: Nothing.

Samsung users are significantly more interested than Apple users in:

- Long lasting battery

Standout Factors for Next Phone Purchase

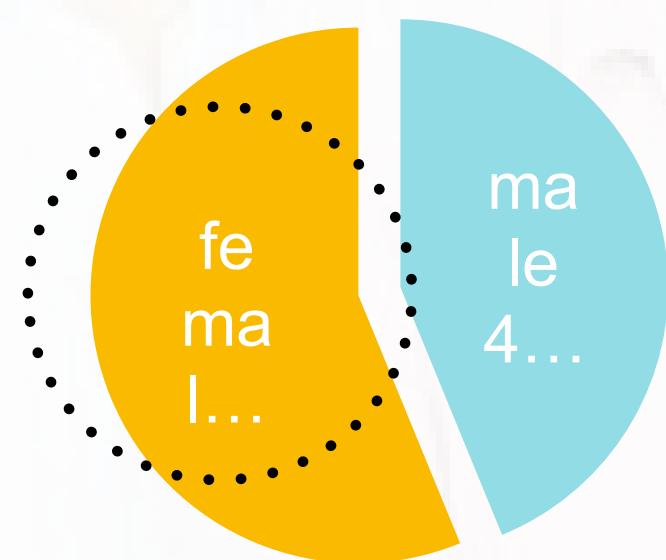

- Apple users will buy their next phone when it is broken, too slow, or has a cracked screen.

The Stylish Streamer

11%
of respondents

Though this segment is interested in nearly all the features, they are the heaviest media streamers. The most important features for them are:

- Seamless streaming of music / video
- Premium audio
- Attractive form factor

This “want it all” group also values other features:

- Connect to TV
- Wireless ear buds
- Curved screen
- Multi-tasking capabilities - especially Samsung, but also Apple
- Fast network connection

Though this is the lowest income group, they are the segment who will pay the most for phones.

Interests

- Fashion
- Beauty/Makeup

Stylish Streamers Have the Lowest Income, But the Highest Phone Budgets

Stylish Streamers are a financial contradiction. They are disproportionately high on spending the most on their current phone than any other segment but also on having the lowest income. (See demographics slide for income data.)

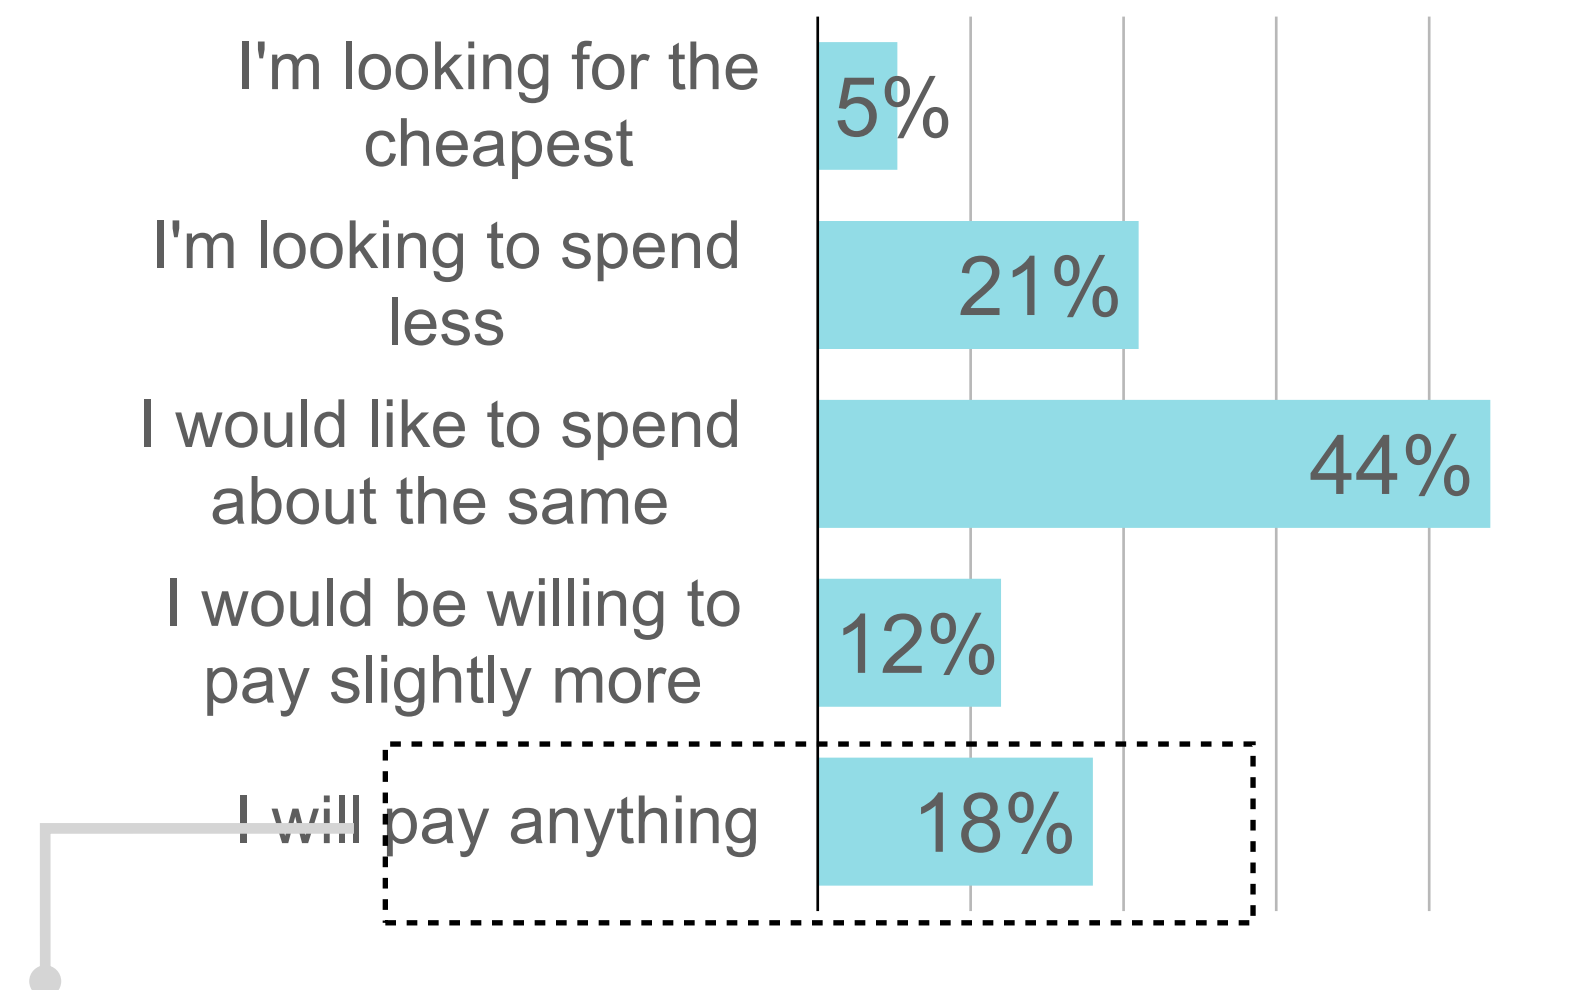

Cost of Current Phone

How much was the full retail price of your current phone?

Price Sensitivity

Considering current phone cost, when shopping for your next smartphone, what are you likely to spend?

Lifestyle and Personal Identity

This segment is willing to spend more on phones than any other segment. Because the of nature of their interests in fashion, beauty, and fitness as public-facing and appearance-based, their phones are likely an investment in personal identity in addition to helpful tech tools.

Stylish Streamers Want It All and Love Their Brands

Stylish Streamers significantly high in brand loyalty, with 87% saying that they love their phones and that it would take a lot to convince them to use a different brand.

Apple users are significantly more interested than Samsung users in:

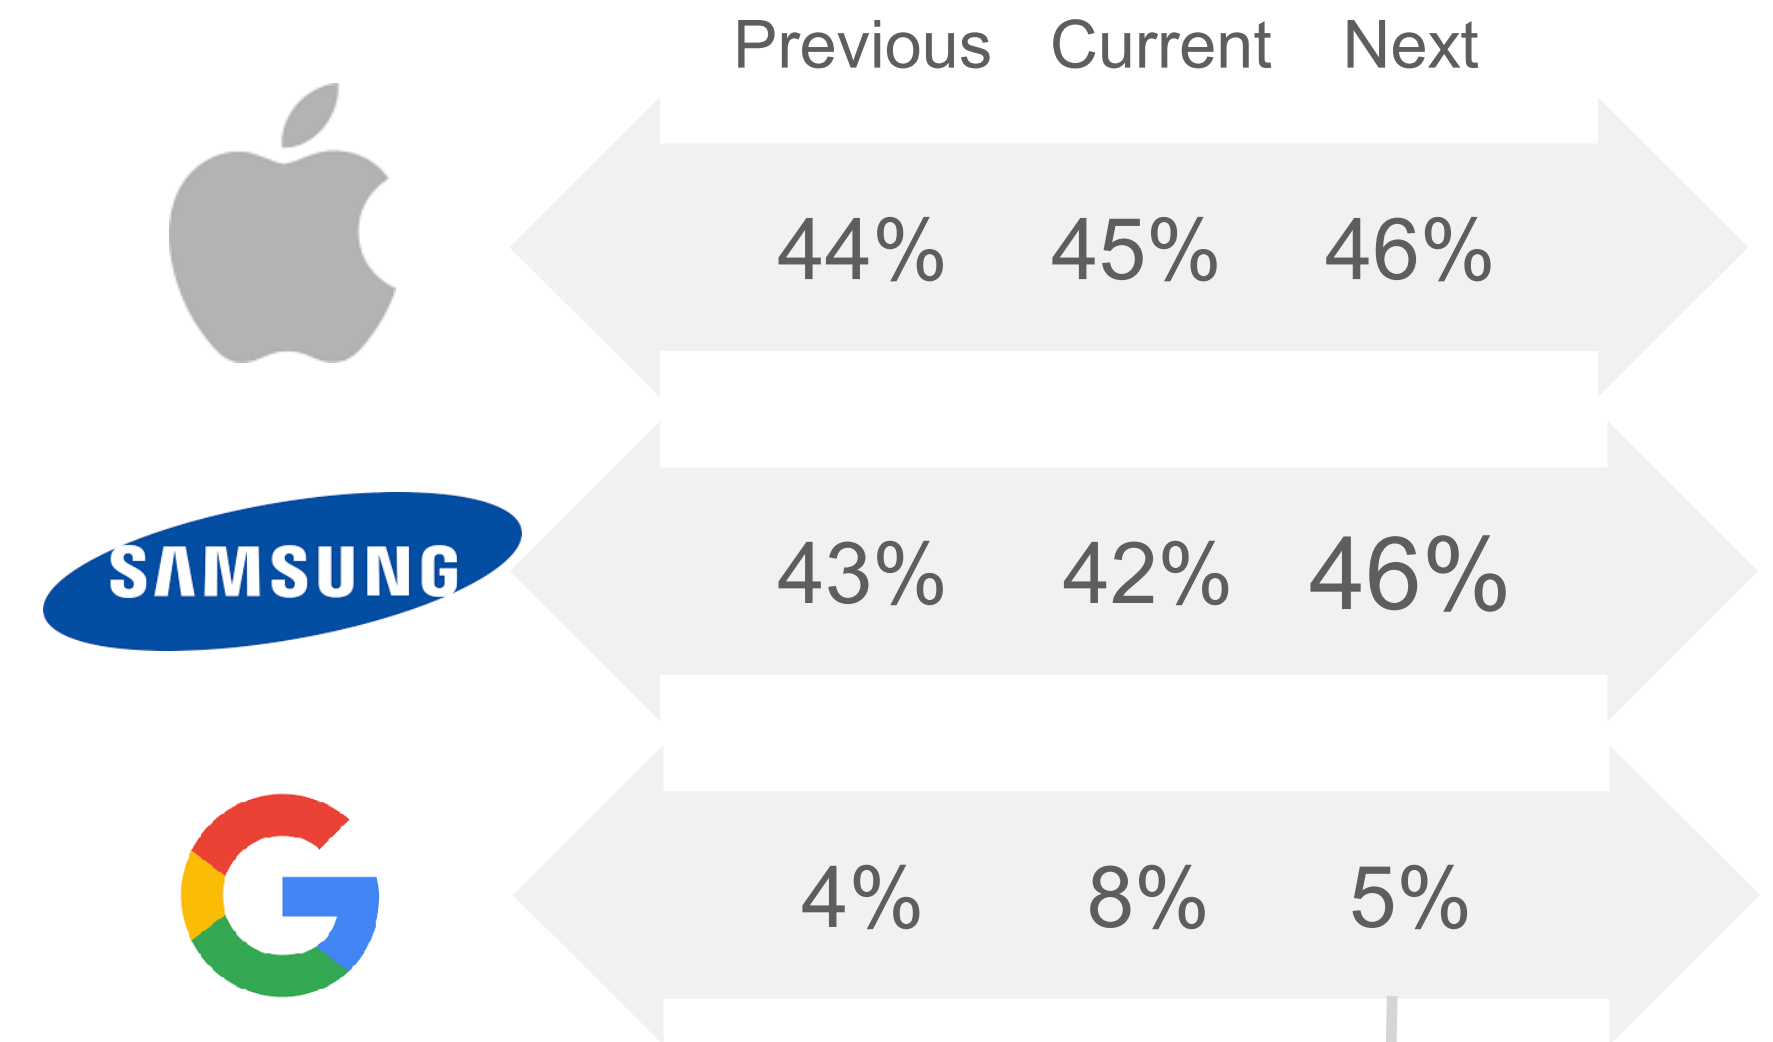

- Nothing

Samsung users are significantly more interested than Apple users in:

- Curved screen
- Expandable memory / microSD
- Rear camera
- Huge internal storage
- Long lasting battery
- Easy migration, transfer of content & ease of learning

Standout Factors for Next Phone Purchase

- Apple users: Brand is well-known and one that I trust
- Samsung users: Brand is well-known and one that I trust
- Other Android users: Phone is too slow, screen is cracked. (Google Pixel will be their next phone.)
- All users: water/dust proof

This segment & Fast Movers are the only segments to self-report that they plan to move away from Pixel for their next phone.

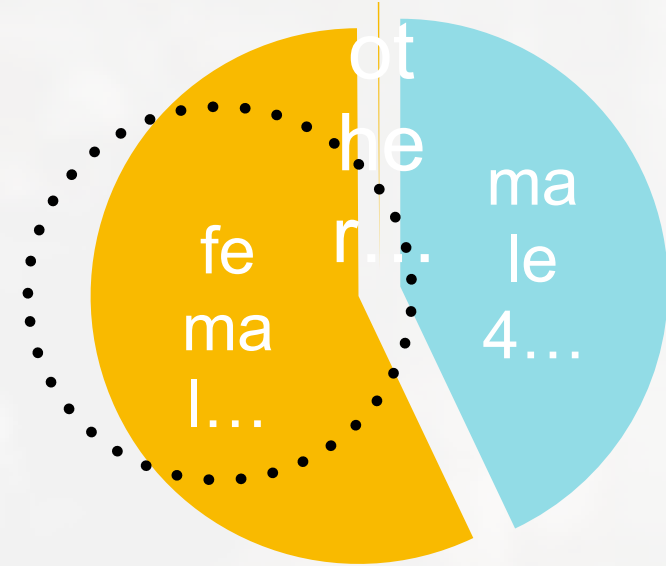

Samsung may be gaining this segment over Google in desired next phone. More analysis needed.

Stylish Streamer

General Demographic Data (n = 115)

Differentiated

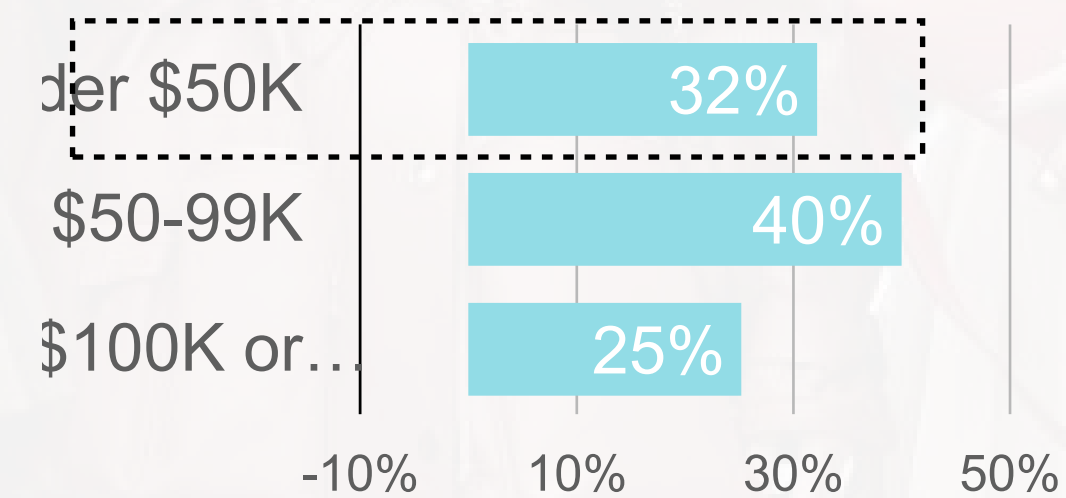

Gender

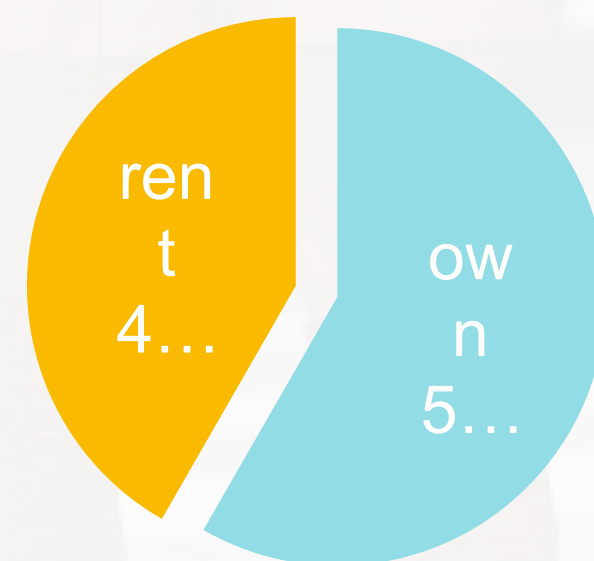

This segment has the smallest income.

They are disproportionately low in home ownership, and as white identified.

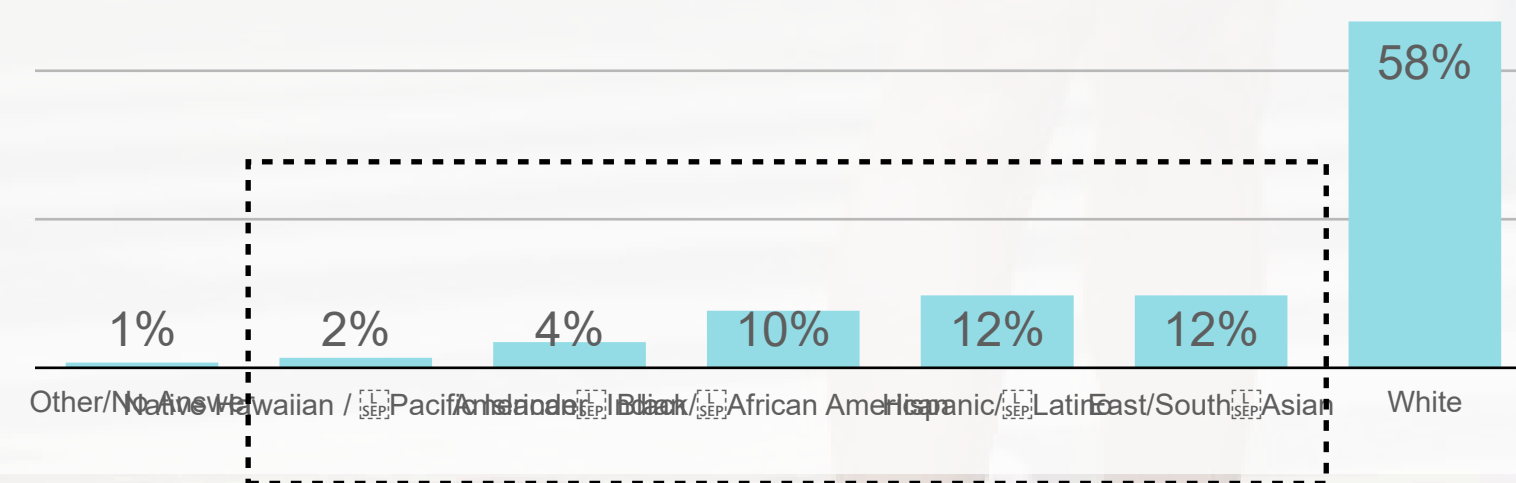

Income

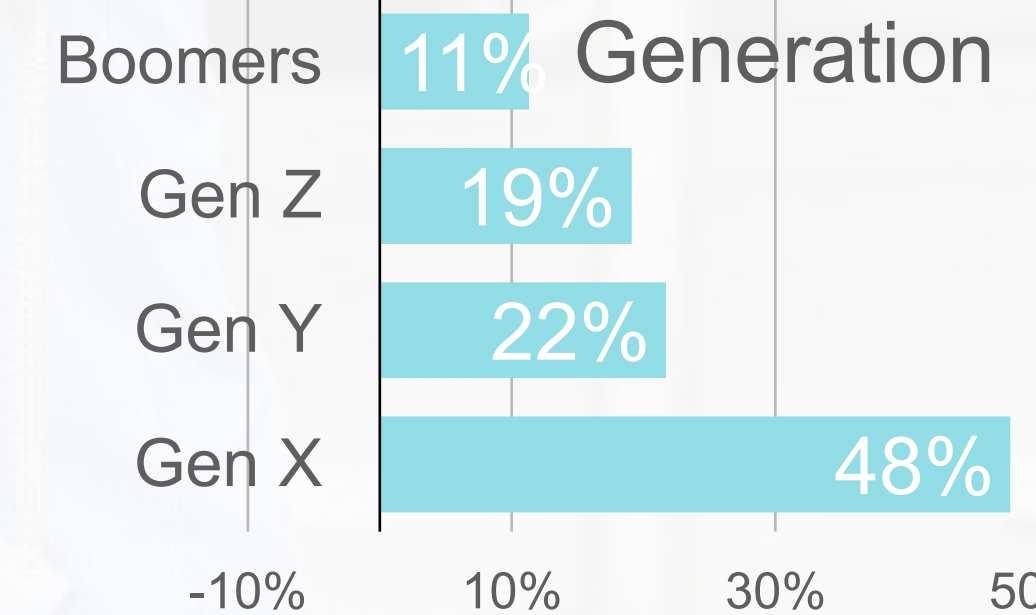

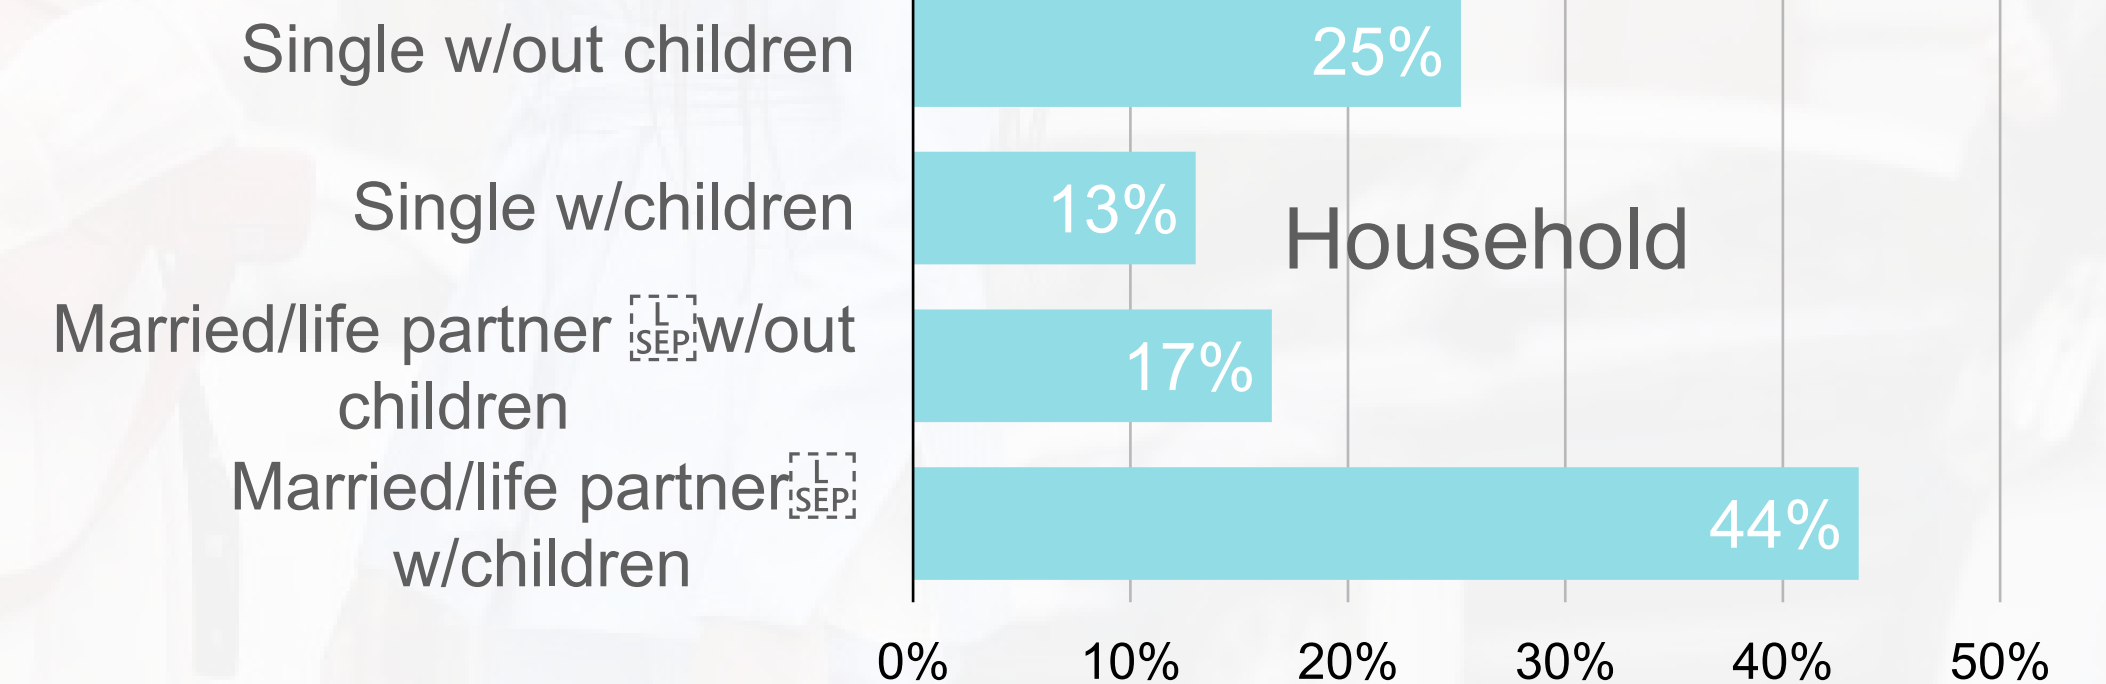

Rent v. Own

Race

Undifferentiated

The Individualist

9%
of respondents

This is a segment of practical individualists who do not identify with any brand and have low interest in features. They demonstrate a strong affinity to Google but are open to moving across smartphone brands. They learn about through word of mouth and are slow to upgrade their phones, waiting for bugs to be ironed out.

Although this segment is disproportionately high in GenY (millennials), they are still slow to adopt new technology and slow to upgrade their phones.

Standout Characteristics

- Low in tech adoption even though they are Millennials.
- Lowest of all segments in feature desires.
- Highly Educated - disproportionately high in PhD
- Work in Scientific or Tech fields

Young vs Old

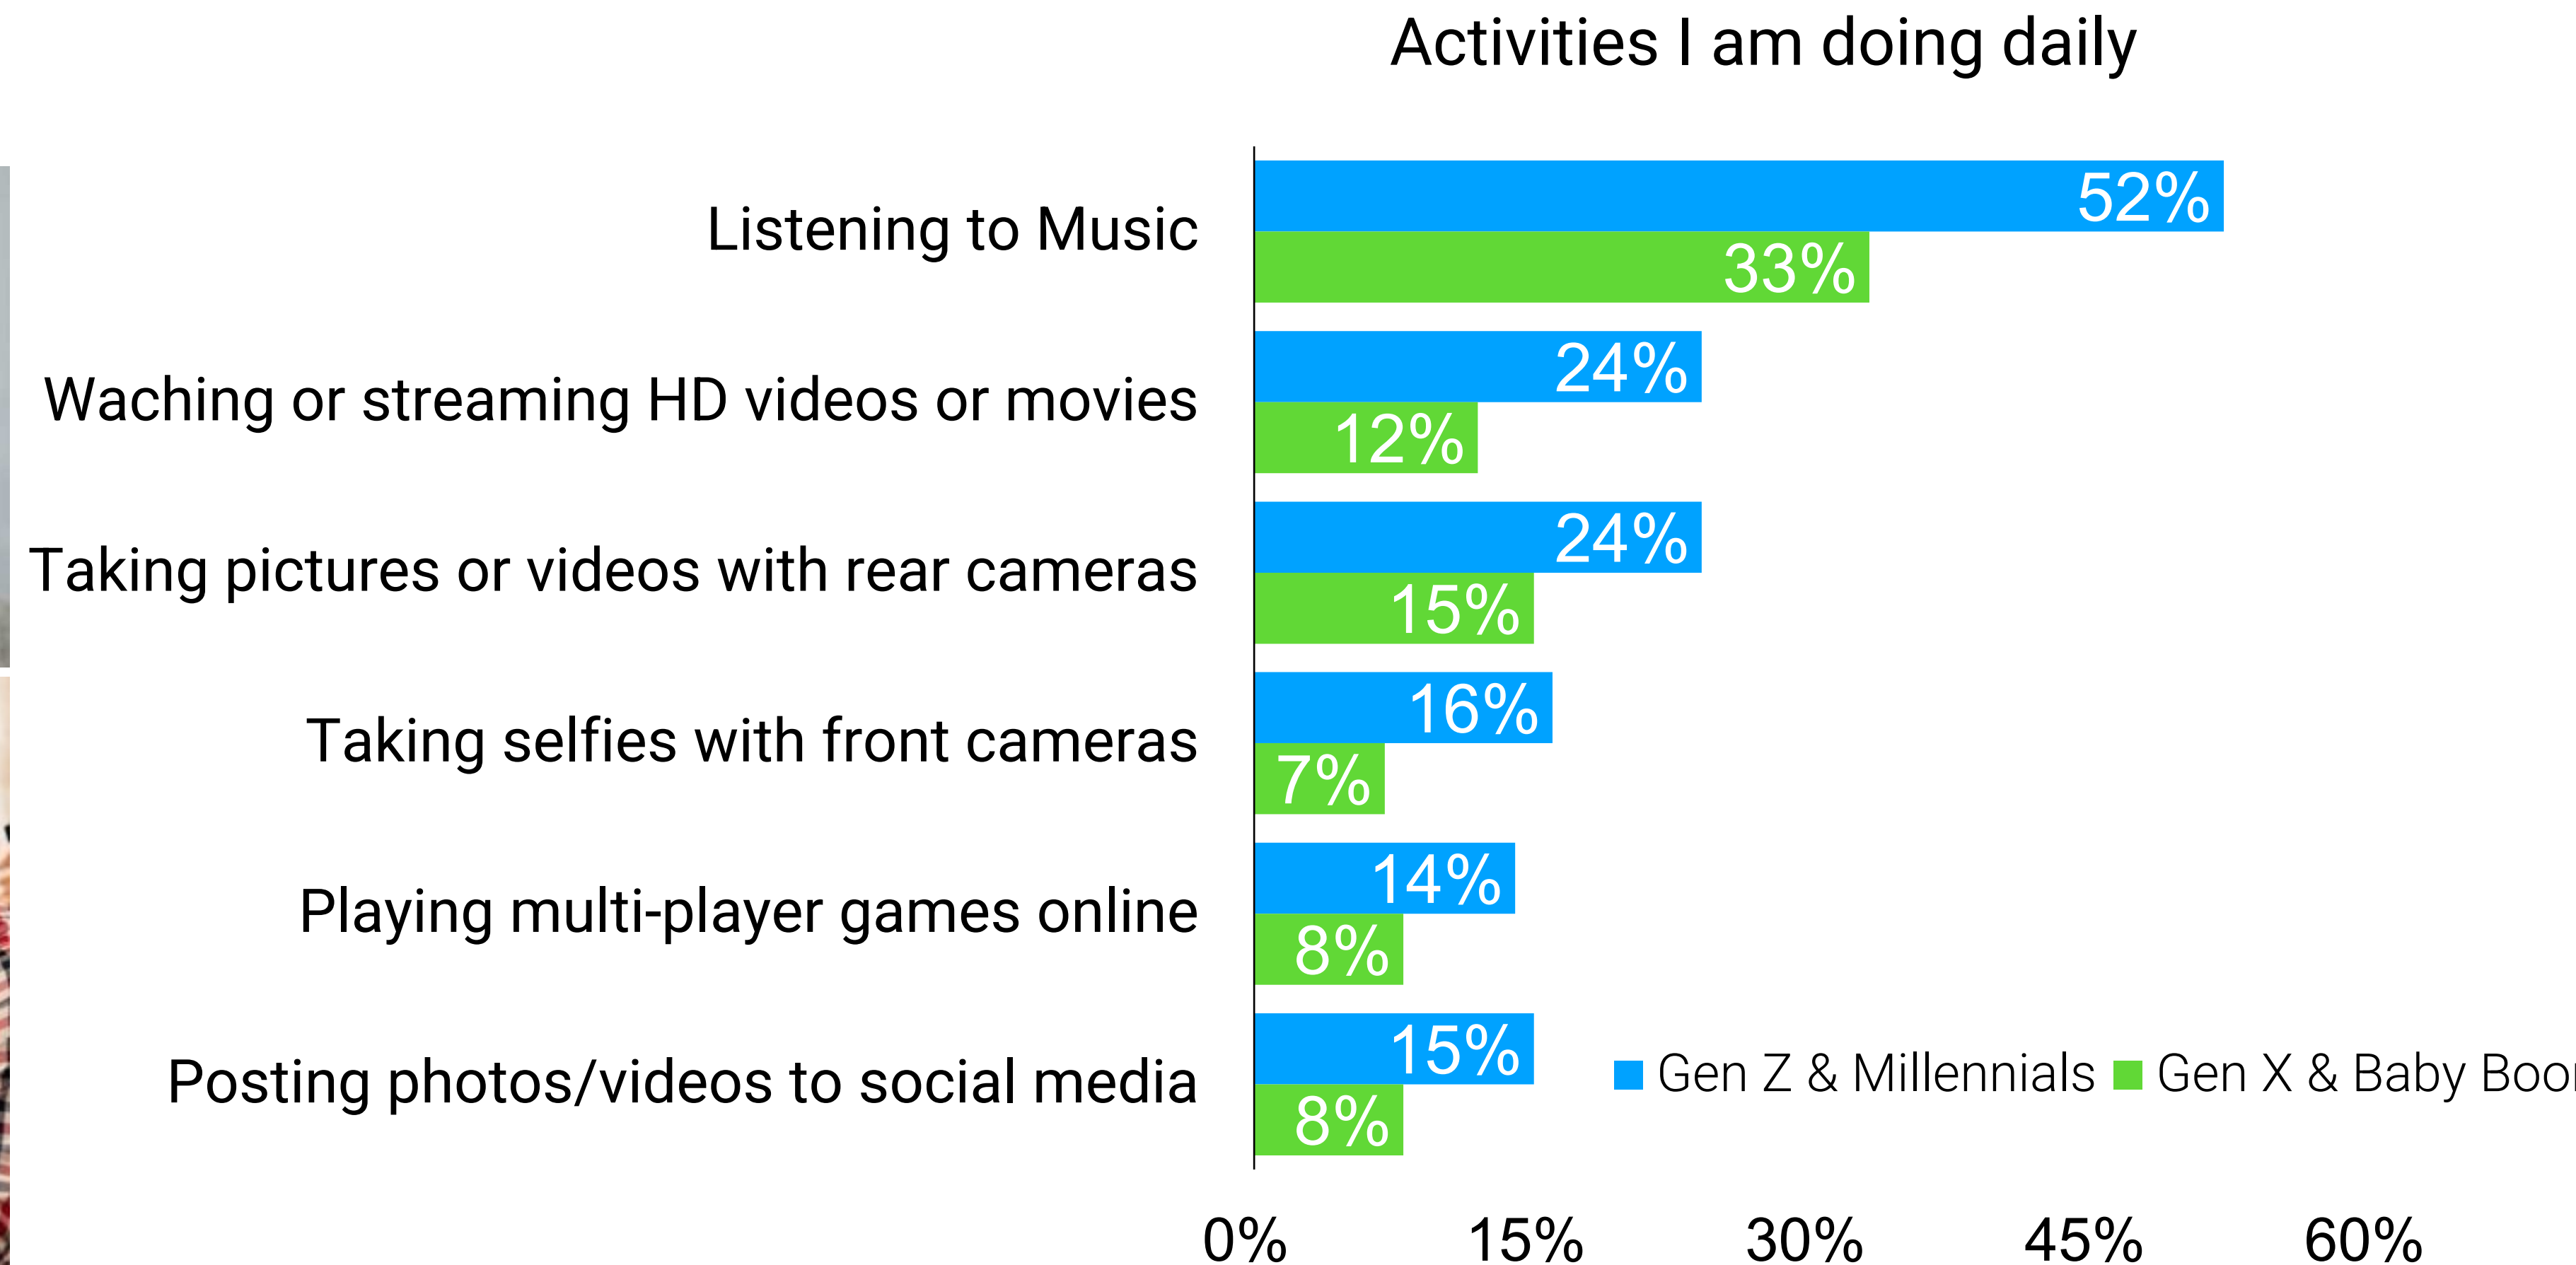

Gens Y & Z vs. Gen X & Boomers

Younger vs Older (Summary)

Overall, younger users want more of the latest features to support their increased media streaming and social media activities. Older users, while still valuing many of the same features, tend to be much more practical. They tend to be more brand loyal and prefer to stick to a trusted brand. They value practical features like extended battery life and ease of use. Older users have a slower upgrade cycle as well. Overall, younger and older respondents do not differ significantly in their preferred brands or their price sensitivity.
