SELF APPRAISAL

Hung, Sang

Page 1 of 13

EMPLOYEE INFORMATION

Name : **Hung, Sang**

Job Title : Dir WT Product Mgmt

Division : STA - PRD

APPRAISAL INFORMATION

Evaluation Year : 2012

Self Appraisal Start Date : 11/01/2012

Due Date : 12/05/2012

Evaluated by : Dicarlo, Nicholas

Confirmed by : Packingham,
Kevin

CORE COMPETENCIES

*We recommend that you provide comments to support your performance during this review period. These Competencies are directly linked to Samsung Corporate values. All competencies are weighted equally for all employees. You will be rated 1(High)-5(Low) on each competency by your supervisor based on his/her observations of your performance during the review period.

CREATIVITY**Employee Comments :**

With the input from STA Strategy, Marketing Research and Product Planning team members, I created Music Service Device/Service Plan consumer research plan & design to model realistic competitive landscape. This research will provide market/product intelligence for critical business decisions for 2013 bundled music service/smartphone strategy. The initial scope of the research was a simplistic web survey covered only Samsung Music Hub device subsidy/service plan with \$199, \$99 devices with \$100 discount for those devices with subscription to music service plan at \$9.99 bundled with a 2-year voice/data plan. However, the bundling of free music/radio service by Nokia music, the popularity of free radio apps from Spotify, Pandora and the potential entry into device/music service bundle by major competitors (e.g., Apple) drove me to consider other research approaches and methodologies (e.g., conjoint analysis, Bayesian analysis) to accommodate wide-ranging and realistic scenarios in the market. After considering the time, cost, flexibility and complexity of different advanced data modeling methodologies, I settled upon conjoint analysis. I also included different price levels of devices, subsidy levels and service prices for measurements of price sensitivity in a much more realistic context of the competitive devices/music services in the market. The results and simulator tool can be used to investigate our potential market share and impact on our revenue with different strategies adopted by us and our competitors (Research results and simulator will be available early Dec 2012).

Impact: provide a market share/revenue simulator tool to model competitive scenarios of device/music service bundles for 2013 and decide upon the strategy to pursue optimal revenue and/or market share.

CHALLENGE

Employee Comments :

It is very difficult to gain internal support to improve the accessibility of our products/services. The general impression of such activities was that accessibility catered for a small percentage of the population and would not have significant impact on our current revenue. Such a view did not take into consideration of both the social responsibility of our company and brand image enhancement to the general public. Some of our major competitors have taken great strides in the last 3 years and offer products with superior accessibility features and experience. Many aspects of the accessibility product experience research and planning will actually benefit our product experience far beyond the disabled population. For example, accessibility features will be useful for aging population and simplifying product experience. Such efforts can also enhance multi-modal user interface including the use of motion, speech and gesture to simplify human-device interactions. I have been working closely and proactively with a small cross-functional team and cross-division team to change the status-quo and bring more attention to the issues. Research sessions and trials on Galaxy S2, Galaxy Tab, Android ICS with totally blind and low vision were conducted to establish the accessibility baseline of Android products (Jan, July 2012). Results were communicated to the HQ Accessibility Task Force. The inconsistent accessibility experience with Galaxy S3 and Galaxy Note 2 from my preliminary evaluation has been called into attention within our team working on the simplification of initial out-of-box experience (Nov, 2012). Research activities with disabled population are being undertaken with Galaxy S3 and Note 2 (Dec through Jan 2012). With the potential financial impact of the FCC Order in 2013, we have started to raise executives' awareness of accessibility and the FCC requirement to perform and document user research with disabled population (starting Jan 2013). It is a great opportunity for Samsung to excel in the design and development of products/services to support accessibility and extending the benefits of universal design to simplify the product and user experience of our devices.

Impact: Increased executive awareness and support to accessibility product/UX design driven by user research with disabled population. The team met with Kevin Packingham (Sep 2012) and Dr. Kwon (Nov 2012) to further support for accessibility design, research and requirements.

SPEED

Employee Comments :

The unpredictability and urgency of internal research needs have driven me to develop a well-oiled “Just-in-Time” approach in handling urgent research requests in the context of existing research pipeline.

This “Just-in-Time” approach involves logistic adjustment, extra buffer in recruiting participants and inclusion of research topics that can be swapped out at the very last moment. It also maximizes the use of recruited subjects without wasting any resources for the research. When I conducted consumer usability research of differentiable features of Galaxy S3 smartphones, HQ and STA Product Planning made an urgent request to compare Android hard key user experience (3-key vs. 4-key arrangements with different functions) 3 days before the actual research started. I integrated the request in our research design and protocol quickly and delivered the research output back to the team one day after completion of data collection. In the same research, a request to perform usability research on NFC Pad/Tactile Demonstration Station and Retail Mode for Galaxy S3 was also added a week before. I also integrated the request into the design and protocol and provided a simulated retail shopping environment in the testing facilities for more valid results (June 2012).

Impact:

The results of Android Key were used by STA Product Planning to validate the 3-key configuration of Galaxy S3 (specifically 1 physical key and 2 touch keys) was most preferred by consumers compared to other configurations (e.g., 1-physical key as in Apple iPhone or 4-key arrangements in many Android devices). It also validated the touch key functions as Back and Menu (instead of Back and Recent Apps in Google ICS devices).

The results of the NFC Pad/Tactile Demo Station and Retail Mode were used by David Tompkins of STA Marketing to support the business case of enhancing the experience of retail mode video and interactive product demonstration stations at retail locations.

STRATEGIC FOCUS

Employee Comments :

With the direction from STA Product and Experience Planning team members and input from other teams (STA Strategic Marketing Research, STA Product Management, R&D MNO Lab, NAHQ Market Intelligence, HQ R&D Advanced UX and HQ Design Group & HQ Product Planning), I planned, executed, delivered user research to support and enhance the product and service strategy and product/user experience design of Galaxy S3, Galaxy Note Family and Galaxy Tablet. I planned research based on the research requests from these organizations as well as our anticipation and assessments of research needs. Examples: Galaxy S3 Differentiable Product Experience Evaluation and Design Recommendation (Out-of-Box setup and Discoverability) was driven by our own team (June, July 2012), Multi-Window User Experience in Galaxy Note 10.1 was done with the request from HQ R&D Advanced UX team (May 2012), Galaxy Note S-Pen App Consumer Research from our own team (Aug 2012), Multi-user Account Management user experience in Galaxy Tablets from MNO Lab and NAHQ (Sept 2012), Galaxy Camera Product Experience Evaluation from our own team (Oct – Nov 2012).

Impact:

Worked closely with STA Product Planning team and other cross-functional teams and provided product experience or consumer primary research of our strategic products (Galaxy S3, Galaxy Note 2, Galaxy Note 10.1 and Galaxy Camera) and services (e.g., Music Hub) for MR improvements, feature suggestions, market share simulation and recommendations for next generation products/services. Specific impacts of various projects were described throughout this document.

SIMPLICITY

Employee Comments :

Advocated simplicity and visibility of key features/functions for products and provided 3rd party user research of our products highlighting the issues of Out-of-box setup and usage issues of Android-based devices and the importance of simplicity of setup experience for novice smartphone owners. For example, a Verizon user research report was shared with the team and served as reference material for the designers in the our team to make recommended design changes for J. (Oct 2012)

Continued to simplify research report by distilling research results and insights with video clips and fast facts to convey complex data/results in a visual and understandable manner (from July 2012). The latest examples were the consumer research report of Multi-user Account Management and the Product Experience Evaluation reports for Galaxy Cameras. I used video clips extensively to provide contextual understanding of product and user experience problems. The initiative started with Music Hub Internal User Evaluation (July 2012) and continued through Multi-User Account Management Account Consumer Research (Sept 2012), and the Galaxy Camera Product Experience Evaluation (Nov 2012).

Impact:

The simplified research reports using video analysis and clips are more engaging and easy to read and follow through with key problems/issues illustrated or demonstrated rather than described in detail. The actionable recommendations are clearly traceable and understood with the video demonstration or documentation. Reports are developed in the line of a storyboard rather than presentation of detailed results.

SELF-CONTROL / EMPOWERMENT

Employee Comments :

Take initiative to plan and execute important product experience research of differentiable/unique product or product experience that may not be the primary focus of the team at the time of the research but have critical impact on the product experience at launch of the product as well as future roadmap of the product.

Example: Conducted prototype product evaluation of multi-window product experience evaluation of Galaxy Note 10.1 with 12 internal STA employees with actionable recommendations to address user experience issues (May 2012).

Impact:

The critical user experience issue identified (replacing app in split windows) was fixed for the launch of multi-window feature in Galaxy Note 10.1. Other fixed issues included the icons for “dismiss windows” and “cancel operation”. The long-term recommendations to address usability issues of multi-window were also delivered to R&D Advanced UX team and our internal STA Product Planning team for tablets.

Examples: Conducted both prelaunch usability evaluation (focusing on Sharing/Connectivity Experience), competitive product experience analysis of Galaxy Camera as well as internal STA employees evaluation (focusing on camera UX, product design as well as sharing experience) to identify both tactical and strategic UX and product design issues. The reported issues so far were addressed by HQ R&D team through immediate fixes, maintenance release fixes and future product improvements (Oct- Nov 2012)

Impact:

identified UX issues for R&D and fixes, MRs and future product improvements (49 software issues + 8 hardware issues identified in the process, 15 software, 2 hardware issues fixed and 10 MR planned). Completed actionable recommendations for future Galaxy Camera product evolution and roadmap.

CUSTOMER FOCUS

Employee Comments :

External Customer Focus

The consumer research done focused on the needs and user behavior as well as user performance of our devices/services by our ultimate customers (consumers). For external carrier customers as well as the end-users, I collaborated with T-Mobile UX team on the consumer research of product requirements (screen size and type, form factor, audio/video requirements) of the Joint Marketing Device for 2013. The project was requested by Kevin and I worked with the team member responsible for JMD and our T-Mobile Account team. I worked with the T-Mobile UX team closely from planning, execution, analysis and report of the research.

Impact:

My close involvement with their team fostered good will and close collaboration between the 2 companies to further increase our device sales. The collaboration also help to scope the requirements according to objective and well-established statistical analysis criteria as I ran all the testing and interpretations. (June - August, 2012)

Internal Customer Focus

I collaborated closely with NAHQ and MNO Lab. to define the scope and research questions of Multi-User Account Management consumer research and continue to follow up with NAHQ Market Intelligence on suggestions of additional use cases of multi-user accounts features in and R&D MNO Lab on the feasibility of development of recommendations and suggested features as a result of the Multi-User Account Management consumer research on top of Android 4.2 (Sept 2012 – Dec 2012)

Impact:

Increased level of collaboration between different divisions within Samsung – NAHQ, MNO Lab. and STA.

CRISIS AWARENESS

Employee Comments :

I have done extensive and in-depth usability research of speech recognition and QWERTY keyboards in the past 3 years. HQ R&D Advanced UX team wanted to tap into my expertise in those areas and conducted comparative UX research with updated S-Voice in Galaxy S3 and various prospective designs of Samsung virtual keyboards in Galaxy S3, Galaxy Note and Galaxy Note 10.1. They agreed to fund STA research projects (eventually covering Out-Of-Box user experience of Galaxy S3 differentiable features, Android Hard Key layout and NFC Pad Interactive Demo station with Retail Mode) through Dallas R&D Lab as secondary topics in the same research. In return, I would provide consultation, the protocol and performance measurements/analysis of the speech recognition and QWERTY keyboard projects they focused on.

The project approval and funding process was caught in the STA system that could have impacted on the timeline substantially. I anticipated delays by setting up the Legal contract process, but it took too much time. I proactively found that there was an alternative path without going through the lengthy contract. Even with the alternative path, the whole process ballooned to a crisis when the EO for the project could not be issued on time as requested (usually at least 2 weeks before research started to allow time for recruiting participants and logistic arrangements). Since the research was scheduled to begin the week of June 18 and EO was not issued June 4. I reached out to the key stakeholders from Dallas R&D Lab., Legal, Accounting and Finance Departments multiple times through email, phone calls, face-to-face meetings to effectively accelerate the project approval process. The PO was finally issued on June 14 and the research could be carried out in a timely manner with 1 day delay.

Impact: Without my urgent intervention and persistent involvement with key stakeholders from various departments, the research could have been delayed at least several weeks or even got canceled. Critical findings of Galaxy S3 out-of-box differentiable features and urgent research requests (e.g., Android Key Layout) would not be carried out and delivered in time.

CONTINUOUS INNOVATION

Employee Comments :

Continually sought to improve and advance research tools and methodology to enhance field validity of the results. Actively sought for critique, feedback and advances in research and testing methodology, protocols, data analysis and research reports for project done, improving the quality and rigor of the entire research process.

Examples:

1) The combination of both traditional usability laboratory style research procedure under “controlled environment” to more realistic situations simulating real-life usages; A simulated retail shopping environment was set up and used in NFC Pad Demonstration Station User Experience Evaluation (June 2012)

2) Extended usage trial of Samsung products/services by internal employees for prelaunch devices to identify usability and experience issues for changes, MRs and future product improvements. Galaxy Camera Product Experience Evaluation with Internal STA employees (Oct Nov 2012)

3) Use of planned video recording with smartphones and Galaxy Cameras during the research process to demonstrate important and key issues instead of using video recording as backup documentation for the research. Examples: Music Hub Service Experience Evaluation, Galaxy Camera Product Experience Evaluation (July, Oct-Nov 2012.)

Impact: Planned video recording and subsequent detailed video analysis enables me to develop a storyboard for a more engaging research report and to document user experience issues/problems of a service or product without “scripting” research participants’ responses at the same time. Although it is a more time-consuming process (individual interview/recording session will be required for each participant), it preserves the virtue of a more objective evaluation without social influence from group sessions. The results are more representative of all the participants rather than influenced heavily by a few vocal participants (which happen frequently in “focus group” research).

TEAMWORK

Employee Comments :

Collaborated within STA Product & Experience Planning team members as well as cross-functional and division organizations including STA Marketing, STA Product Management, R&D MNO Lab., R&D Advanced UX, HQ Design Group and NAHQ Market Intelligence on consumer research planning, execution and actionable recommendations. Follow-up with cross-functional recommendations, suggestions and input from the consumer or internal STA employee product experience research results. Provided and shared user research information with both internal and cross-functional teams.

Examples:

continue to follow up with NAHQ Market Intelligence on suggestions of additional use cases of multi-user accounts features in and R&D MNO Lab on the feasibility of development of recommendations and suggested features as a result of the Multi-User Account Management consumer research on top of Android 4.2 (Sept 2012 – Dec 2012)

Worked within STA product & Experience Planning team members to collect and compile research needs to design/execute or facilitate research design/execution with actionable results. Examples included Consumer GroupCast features preference survey (Oct 2012), Galaxy Note 2 form factor recommendations (based on smartphone/tablet form factor research done in 2010 and 2011, March 2012)

Collaborated within STA Product & Experience Planning team on the research related to differentiable product Experience Consumer Evaluation & Feature Discoverability of Galaxy S3. The results of the research were used by STA Product Planning to convince HQ Product Planning and Design Group to improve the discoverability of features of Galaxy S3 and also as general guidance during a 2013 UX Workshop with HQ. (July 2012)

LEADERSHIP

Employee Comments :

Took initiative to plan and execute both important strategic and tactical product experience research follow-up with cross-functional recommendations, suggestions and input from the consumer or internal STA employee product experience research results. Set research direction and examples by maintaining the transparency of actual research process covering the planning, preparation, data collection, data analysis and interpretations as well as reports writing with rigor and integrity with them doing the actual research. Advocated the importance of reporting true results and data as well as possible limitations and constraints of the research process.

Impact: the Multi-User Account Management Research was planned and executed with diverse cross-functional teams input from NAHQ, R&D and STA. I promoted open dialog and actionable suggestions from the team. Both the MNO Lab and NAHQ were actively engaged in the recommendations and suggestions from the results of the research and the follow-up meetings. The MNO Lab. is now conducting a technical feasibility study of the integration of the missing features into of Android 4.2. (Aug - Present, 2012)

ACCOMPLISHMENTS & GOALS

ACCOMPLISHMENTS

Employee Comments :

Accessibility and Usability of Samsung Mobile Devices Running on the Android Operating System for Users with Blindness or Low Vision - Galaxy S2 Smartphone and Galaxy Tablet (Feb 2012)

Request from Kendra Green

Impact: established Android HoneyComb and Ginger Bread did not meet accessibility needs of blind and low vision users.

Competitive UI Performance Research Memo - Samsung Auger and PanTech Burst (Feb 2012)

Request from Kevin Packingham

Impact: established UI performance issues of Samsung Auger compared to PanTech Burst both objectively (actual UI speed) and performance perception by users.

Form Factor Recommendation and Modeling Research for Galaxy Note 2 (March 2012)

Request from Silviu Moraru

Impact: the second recommended approach for 5.5" display and 16:9 aspect ratio of the product was used in Galaxy Note 2.

Multi-Window Product Experience Evaluation - Galaxy Note 10.1 (May 2012)

Request from Yoojin Hong (R&D Advanced UX)

Impact: critical usability issues identified and applied to First Generation Multi-Window Feature and suggestion of multi-window UX framework for future Product/Platform improvements

Android Hard Key Layout Consumer Evaluation

Request from YK Min

Impact: Validated the 3-key layout of Galaxy SIII as the most preferred layout for smartphone owners and intenders and competitive advantage of the 3-key layout over 1-key (iphone) and 4-key layout (Android pre-IceCream Sandwich) (June 2012)

Galaxy SIII differentiable product Experience Consumer Evaluation – Out-of-box Setup and Key Feature Discoverability (July 2012)

Request from Drew Blackard, Ryan Bidan

The results of the research were used by STA Product Planning to convince HQ Product Planning and Design Group to improve the discoverability of features of Galaxy S3 and also as general guidance during a 2013 UX Workshop with HQ.

Impact: based on the research results, several key improvements were applied in the Galaxy S3 MR (including better user discovery of Share Shot, Information Ticker, and Voice Control for Apps features) and even more were applied in Galaxy Note II (including better user discovery of S Beam and Group Cast features).

T-Mobile Joint Marketing Device Media Quality Consumer Research. (June, July 2012)

Request from Kevin Packingham

Impact: The collaboration helped to scope the requirements according to objective and well-established statistical analysis criteria (I ran all the testing and interpretations).

Galaxy SIII NFC Pad Demonstration Station UX Consumer Evaluation (July 2012)

Request from David Tompkins, Tim Benner

Impact: Validation of Interactive Station engaging consumers and future funding for similar marketing tools, support of business case for enhancements and development of Interactive Demonstration Station and Retail Mode

Galaxy Note S-Pen Apps Consumer Research Web Survey (Aug 2012)

Request from Hanna Tong, Silviu Moraru and Shoneel Kolhatkar
Impact: Identified top actionable recommendations to improve S-Pen Ecosystem and Galaxy Note. These include improving handwriting recognition, developing more productivity and drawing/photography apps and bundling productivity apps.

Music Hub Internal User Trial Research (August 2012)
Request from Drew Blackard and Chris Martinez
Impact: identified UX and functional issues of Music Hub service on the device, used by Strategy Team to mSpot to prioritize fixes.

Multi-User Account Management Consumer Research (Sept 2012 - Present)
Request from Justin Ryu, R&D MNO Lab., Silviu Moraru and Shoneel Kolhatkar
Impact: identified key product requirements and recommendations/suggestions of feature development, active engagement from NAHQ and MNO Lab. on feature and technical development/assessment of Multi-User Account Management

Galaxy Camera Prelaunch Usability Evaluation (Oct 2012)
Request from Hanna Tong
Impact: identified UX issues for R&D and fixes, MRs and future product improvements (49 software issues + 8 hardware issues identified in the process, 15 software, 2 hardware issues fixed and 10 MR planned)

Galaxy Camera Product Experience Evaluation- Competitive Evaluation and Internal Users Trial (Oct, Nov 2012) Request from Hanna Tong
Impact: Additional 20+ product experience issues identified through the evaluation process and validation of existing UX and product design issues.

Music Service Device/Service Plan Bundling Consumer research (in process)
Request from Chris Martinez, Tejaswi Javagal-Narayana

AREAS OF DEVELOPMENT

Employee Comments :

Continue to simplify complex research insights/results and design engaging presentations for effective executive consumption.

Continue to work within the team to further focus research activities on their needs.

Develop detailed recommendations and measurable criteria of product improvements based on consumer product experience research and business needs.

Advocate consumer experience from user/product research as basis for innovative, strategic, socially responsible and differentiable features development.

FUTURE GOALS**Employee Comments :**

Become a world-class user and product research expert with both top-notch quantitative and qualitative skills.

Continue to enhance research methodology and analysis framework and provide valid and insightful results for the company to innovate and improve our products and services to be #1 in the marketplace

Advocate professional integrity and ethics as a researcher and scientist
