Aquas Azzurro

Sancti I - Fata morgana

I creep from my arid desert of Ego;
a stately Temple hovers in, on Sirena's Isle.
Bromminged with curiosity and awe,

I launch my pilgrimage -
to the Taj Mahal of the human civilizations;
the Cathedral of eternal quest.

Exotic architecture! Gothic edifices!

Colossal domes with bygone aureoles;
glittering under the kaleidoscopic Sun.

Beyond the glen of Fantasy, in subliminal hues,
lies the Tritium - adorned altar of hierarchy;
and the palatial nuclear fusion plants.

All images fade. Ephemeral phenomena!
Fata morgana!

I pause,

I turn my head, oblivious of my drougth.

A chilly gale blows in, over the bleak valley.
Enshrouded by the Fog of Hate.

I cannot see my way.

Emersted with cadaverous desperation,

I dash for no destination.

Thunderbolts of sorrow! Thor of Destiny!
Tornadoes of Hades are roaring;
sand dunes of Lohi are shifting and rolling.

Canto 2 the Ordeal
Nightfall! I hanker; I crave for dawn.
I rocket through space; to emancipate from the
gravitation of Self.
I shiver; absolute darkness - a haunted cemetery;
with grotesque apparitions of despair;
with specters of lovelornness and withered faith.
Ah! Medusa of inferiority and hypocrisy,
thwarting every quintessence of me.
Harpies of Incompatibility,
pursuing after my fugitive Self.
No stars, no Sun, no Moon.
Straits of Messina! Charybdis of frustration!
For them have I faked!

And I, hypocrite of superiority; imbecile of woe.
Where can I ferret out my life?
I can't find but a reprobate of Self.
I worth but nothing!

Gods of violence; diablerie of vices!
Oh! Omnipotent Fate! Ruthless Lord of Probability!
How I prostrate before thee!
With fallen ideals and baffled courage;
with refrained tears and sombre fiances!
For all, be simple; be living;
but never be Hercules of the world!

Lento 3 Desperado

My chest is acid;
my throat is with sour pressure.
I swallow my tears.
Never have I perceived the pure joy of affection.
Never have I tasted the strawberries of life!
People take without giving. People follow without thinking.
Ignorant mass! We have been deceived! We have been
dehumanized!
Where is our ecstasy of life? Where is our zest for
Truth? Where is our love?
Oh! Industrial evolution! Technical upheaval!
How can we cope with thee?
Without conceptual degradation;
and without incompatibility!

Age of Neo-romanticism! Century of Sensationalism!
Reckless consciousness! Irrational beliefs!
Fetish principles! Superstitious element!
How you haunt our minds!
I? Moon of sophistication! Victim of order!
I toil but I am foiled;
battled by the incompatible Self.
Inebriated in my saturnine days;
of which neither Plato nor Mars can face.
I am no traditional moralist;
I came to the sepulchre in Desperado.
Lynxsome graveyards! Here, there and damn everywhere!

hanto 4 the infernal system
We are but a mob of philistines!
Some of us are practitioners of science;
yet we cannot think.
Some of us are disciples of Art;
yet we cannot appreciate.
Each of us is a specialist,
a living encyclopedia of facts.
Each of us is a phenomenal manipulator of methods,
an eidetic memory machine.

We are feelingless;
we are callous;
we are but poikilothermal creatures!

How to solve differential equations? How to convert ketones to carbonyl acids?

Our apprentices and craftsmen of Science know.

Who was Hemingway? Who was Holmes?

Our students and experts of Arts know.

But alas! We never know the world! We never know each other!

Each of us is discontinuous with Nature and the world!

Ask us what the implication of Science is.

Ask us how to correlate historical facts.

We can't help but remain agape.

We are lost sheep in the erg desert of improvidence.

We are the scape-goats of dehumanization.

We are carried away by sophistication! Without understanding and appreciation.

Chanto 5 Gamen and weep

Where is the Taj Mahal of Truth?

Where is the spirit of free inquiry?

They are gone! Gone with the mind!
Gone with that damned educational system!
Gone with the ideology of the people!
Good grief! We learn but cannot feel,
We exist but cannot live!
We feed but cannot grow!
We are inculcated to live without concepts;
and to act without emotions.
Without conceptual thinking; without aesthetic appreciation
We are but enslaved by technical education.

I mourn for rationality; I mourn for wisdom.
I weep for my long lost friends - love and altruism.
I can see the tombs of humanity and philanthropy.
I can see my fellow-men are struggling, suffering;
with diminished hope and gloomy future,
with utmost despair and woe.
I can feel their life and their thoughts.
Reality! You cruel Reality!
Creation of our own hands;
baffle our lives and lessen our confidence.
I can see violence, wars and pollutions.
Oh! Inagic life! I cry.

bento 6 the redemption

Suddenly, a trance catches me.

A flash of divine light whizzed through the air,
defying gravitation and time;
transcending all space and energy.

An exquisite garden emerges before my mortal eyes.

Engraved 'Garden of Humanity', I pull the flamboyant
gates.

Myriads of red roses and sweet flowers emboss me.
Beauteous trees and wondrous plants everywhere.

Vineyard of Arts and Romance.

Above of Aphrodite and Psyche.

Bedecked with honey and flavourless fruits.

I close my eyes. I don't know the time

I wake up with refreshed senses at dawn.

Rejoiced in Eco's warm embrace;

whose charms are always well in blaze.

Darling rose-buds with dewy cups,

sparkle under the golden light.

Down on the sweet new-born grass;

exuding fragrance of peace and love,

where great pieces of music strike-

classical and rock-and-roll alike.
Beethoven, Mozart and Tchaikovsky mixed;
with Beatles and Rolling-stones;
and the celestial harmony of man.

Canto 7 Music of the Sphere

Oh! The grandiose status of music;
her melody, her rhythm, her harmony.
Llamour of choreography, tango and hustle.
Sound waves of unison; auditory perfection of Man.
Sonatas, symphonies, songs, operas;
Jazz, country, rhythm-and-blues,
You are the language of the human race.
You are the speech of our emotions.
You are the rosette stone of our cults, our customs,
Of beauty and of tragedy.
Die Zauberflöte, K. 620, Sleeping Beauty and Faust;
the Young and the Restless and all.

Ballads of love and hatred;
Dances of romance and misery,
dwelling among the human life.
Music of the sphere, ballet of our eras.

Liberation of our minds. To the boundless Self.
To the baroque realm of imagination;
and to instil new faith in despair,
generations of composers, musicians, soloists;
and generations of people dedicated to music.
For love and humanity they sweat;
for the image of Truth they toil;
for the grand Temple of Arts they live.

Chanto 8 the human stream
I wade through the Eridanos of History;
through which our conceptual evolution flows.
Events roll recklessly on the undulating waters;
dazzled with glistening gems of progress.
And we, water molecules in the stream of the human race,
should carry our moments far and strong,
to the Bifrost of Beatitude.
The world is a world of facts and relations;
dynamic and evolving in its history;
linked together in all human endeavours.
Beauty of linguistics! Belle of Beaux Arts!
The expressions of our ideology; the mirror of our life.

Ancient Civilizations of the world;
Evolution of cultures on our Earth.
Oh! Phases of Evolution! History of Science!
And their profound implications!
logical analysis of history; causes and effects of events.
Oh! Philosophy of an age!
How you are (were) determined by the political, social and
educational background.
Confucianism, feudalism, Marxism, Democracy!
Industrial Revolution and Scientific Revolution,
and your deep impact on society.
Oh! crystals of the Modern Man.
Let it be you to lay down our road of freedom.

hanto 9 Inequality
The saddest song ever ^{written} ~~written~~:
for the blood of liberty it flows;
and the human world it mingles.
For justice, freedom and happiness we fight,
under the cruel wild world;
unharnessed by our technology and science.
Millions of us are starving, weakening, dying.
Millions of us are glutting, strengthening, growing.

We are all human beings; why? You brutal Environment!
Why? Why we are so unequal?
Oh! Fate! Why you are so prejudiced!
It's unfair! It's unequal! It's unjust!

Look at the poor! Look at the indigent!
Look at the mass! Look at their future!
They are choked by their environments,
but never be given chances to expand, to feel;
Look at the proletarians! They are asphyxiated;
Stifled by their common life, by their common thoughts;
by their common philosophy and by their homogeneity.
Vehement their mental binders are;
Narrow are their perspectives.
Their emotional stresses; their morbid insights.
Why? Why must we suffer?
Why? Why? Why? It's too unjust!

Santo 10 ad infinitum
I stroll along the Beach of Literature;
and dream of the Red Chamber's Dream.
Rocky statues of Homer, John Milton & Verne;
D.H. Lawrence, Robert Frost and their contemporaries.

Classics of Romance; verses of Humanity;
Ah! Living world of novels & classics;
diamonds of our civilizations.
Channeled feelings and emotions of our own!
Vortex of the times; poems of consummation!
Hey! Shakespeare, Goethe, Chaucer and Li Po;
Wordsworth, Bernard Shaw and Edgar Allan Poe;
and their splendid masterpieces.

Strife! Love! Violence! Woe!
Passions of the world!
Doomed tragedies of our mortal cells!
Star-dust of the Universe; parasite of the Earth
blooms brilliantly in the flowers of literature.
Grief! Unfulfilled desires and hopes!
Repressed Self and restrained Ego;
Temporal passions! I yearn for thee!
I pine for thee! I fret for thee!
Heroes and heroines; romance of chivalry,
To tell I pay my tribute;
with awe and wonder of life.

hanto 11 to kalon

Fine arts, creative photography, graphic arts, paintings...
furnish the museum of arts with pulchritude.
I stand in the galaxy of architecture & sculpture.
The wondrous Byzantine Arts, its mosaics, its ivories;
Romanesque, Gothic, Baroque Arts alike;
to the fabulous domain of Modern Art.
Neo-classicism, Romanticism, Impressionism, futurism...
Oh! great schools of painting and sculpture;
outlandish and weird & surrealism;
rejoice in the forces of cultures.
Clusters of renowned artists,
man's pride and aspirations.

Mona Lisa of Leonardo da Vinci; Birth of Venus by Botticelli;
Temptation and Expulsion by Michelangelo; Venus with a
mirror by Titian;
with the grandest ascent of painters;
Dürer, Rembrandt, Géricault, Bogue and Picasso;
and other stars in the galaxy.
Shining with effulgent luster;
striking with the deepest feeling of life;
rambling with laughter and tears.

in their profound appreciation and understanding of
mankind;

They paint man's life with sorrow, with
sympathy and with love.

Senses of aesthetics, sapphires of beauty;
Thou art everything; thou art the loftiest!

Canto 12 Amen, save?

I step into the Westminster Abbey of philosophy;
An august procession of philosophers march on,
Socrates, Aristotle, Hume, Berkeley, Descartes, Comte;
Dewey, Marx, Locke, Ayer and Bertrand Russell;
with banners of pantheism, Marxism, positivism and
rationalism.

Trumpets of exaltation are sounding;

Before the sanctuary in Valhalla.

For the quest of true spirit of mankind they
breathe;

under the celestial light of love they fight
in liberty, in justice and in Humanity.

Novel ideas; revolutionary notions; modern conceptions;
under the Taj Mahal of Truth.

of Sing! Sing a song of freedom!
A song of human imagination!
The geometry of facts; the living world of correlations;
exalts in the rainbow of Festivity.
For Truth and our happiness we strive!
Science and Arts - the keys to Truth;
The beauty of joy; our forgotten past.
On a planet we live and die,
in a solar system we pollute and kill.
Our shame, our humiliations; our glory, our successes.
Our vanity, our avarice; our love, our honesty.
To whom we pay our homage.

Canto 13 Paradise Lost

Paradise Lost! Ravaged by the Hurricane of wars;
You great militaristic states! Suspicion and Hate!
World-spread and earth-wide warfare;
Man's inhumanity; man's irrationality.
Bestial deeds! Crimes and violence.
Human beings, human edifices, human civilizations;
All lost! Lost in the inferno of nuclear weapons,
which possess the cosmic power of annihilation.
National greed and avarice; jingoism and terrorism;

the world's peace and bliss they ruin.
For the quest of selfishness, hideousness and falsity,
on the infernal Earth.

Sob! Sob! Sob!

Mourn for the loss of wisdom;

Weep for the irrationality of man.

The army of great wars impends.

Death, plague, violence and all I forebode;

immediate danger is all I feel.

For patriotism they live and die;

the great soldiers are but weak and vile!

The mass they coax and cheat;

the politicians are but demagogues and humbugs!

All you folly supporters! All you traitors of mankind!

You betray our spirit, our happiness and our peace!

Canto 14 the rainbow

Rise! Great architects and builders of the world.

Rise! Come to the land of edifices;

The grandiose Taj Mahal; the sublime Notre Dame

the gorgeous mosque, the mysterious Sphinx,

the grotesque gothic architecture!

gone! We all long for a land of golden sunshine.
The elegance of St. Peter's Cathedral;
the handiwork of Michelangelo.
Kaufmann House of Frank Lloyd Wright;
Rockefeller Center complex in New York;
Parthenon in Athens; Audience Hall of Xerxes;
The art of building rules.

Nature, the most sublime architect;
Undulating mountains; the snowy Alps;
the picturesque lakes and the inspiring forest.
Time passes by, after eras and era;
great forces are at work,
though abstruse and small they appear to be.
Wondrous animals in spectacular phenomena of Nature,
the awesome and refreshing oceans and seas.
The beautiful sunset and sunrise in red hues.
land of Eden on our sweet Earth.
the touching aspiration of Nature;
the very source of poetry and fine architecture.

Canto 15 the Fancy Land
'Oh, good grief!' All the lovable characters of Beano.

Hey, Smokey - you are the loveliest dog in the world.
Charlie Brown, Linus, Lucy ...
created live under the pen of Charles M. Schulz.
The cartoonists in the world; they
they live in the world of Mickey Mouse,
Betty Boop, Popeye
Walt Disney's Wonderland, Donald Duck, Snow White
and the Seven Dwarfs and Fantasia.
'Old Bill' of Bairnfather, 'Punch' of Kenneth Bink;
William Hanna and Joseph Barbera.
Animated cartoons, satirical cartoons and all kinds of
cartoons;
In the fancy land of human mind,
revitalizes our dreams and joy of childhood.

The film-shooting industry, the influential public media:
Television, press and radio.

The brilliant and dazzling Hollywood.

Great stars of the age;

Elizabeth Taylor, Clara Bow, Shirley Booth;

Edwin Thomas Booth, Ganino Brutus Booth.

The glamour of Oscar's Academy Awards.

From Charles Chaplin to 2001 Odysseus.

all? To the best of all films;
Gone with the wind, the Longest day, Emmanuelle
and the most popular TV programs;
Rich man, poor man; Star Trek, Charlie's Angels

Into 16 Arts?

the The sublime beauty of Arts;
The expression of ideas and emotions as they are;
the philosophy of human life they discern.
Reflections of religions, ideology and emotions;
of Abstracts of man they depict.
vitality and energy they abstract.
Moving, touching and revealing;
in the poems of our life.
Under the puny Earth of man;
Human handiwork shines with lustre.
Proudly defying the cosmic power of Fate;
transcends to the ever-green land.

Into the Kaleidoscope of Arts I look;
a Manifold of patterns I see.
Mirages? Hallucinations?
A ghostly image emerges;

Oh! Damn! This is my reprobate of Self;
the greatest laughing stock he claims,
the worst and ~~other~~ most stupid Self he gains!
strife! Conflict! I combat with him with all might
He groans at me in his grisly voice;
He ~~gibes~~ me with his spear of reality;
and strikes me with his scimitar of order.
Bleed! Bleed! Bleed! Bleed the blood of ideals! he roars.

Canto 17 Abatido

Forsoaken Self! Inferior Self! Ignominious Self!
Where and when can I destroy you?
Where is my fervency of life?
What is my fundamental tool of existence?
My forlorn Self Fate thwarts.
I pick up my sword of Arts and Science
defending myself feverishly with the shield of
celestial hope.
Sanguinary battle! Ruthless combat!
Fate and my reprobate of Self withdraw;
to the hell of despair.
I sit quietly in the vineyard of Humanity,
refining my dagger of thoughts.

The night creeps on. Aurora emerges from the East.
I grow restless. I run and run,
until I am exhausted, and I fall asleep.
In the shrine of Mathematics I lie.
Flamboyant decorations; with Pythagorean grace.
The number systems are inscribed on the Frige;
with the sculpture of natural logarithms.
Great mathematicians are having a banquet,
feasting with Algebra, Analysis and stochastic processes.
Euler, Pascal, Descartes, Newton, Russell, Whitehead;
with Euclid, Riemann, Gauss and Boole.
They stand up and toast to the field of mathematics.

hants 18 Harmony

' π , e , r , $\cosh$, $\sinh$, $\tanh$!' they extol.
Logic and complex variables they praise.
On the gothic vaults of n -dimensions;
with colossal paintings of vectors and tensors;
Matrices and group theory embloosom.
In the apse lies the sanctuary of differential
equations;
with the altar of Laplace Transform and eigenvectors.

Coordinate Geometry the mathematicians expound;
Mathematical Induction they put forward.
They integrate, they differentiate, they calculate
under the welkin of fundamental theorem of calculus
and the fundamental theorem of algebra.

Simplicity and elegance of Mathematics;
perfection and idealization of man's Nature.
The beautiful functions of sine and cosine,
fields of numbers, infinitely many relations;
complex variables, field theory and sets.

Oh! Fabulous realm of Mathematics;
passions of numbers and functions!

Fourier Integrals and Boolean Algebra.

Poems of mathematics, celestial harmony of Truth;
Music of the Sphere; language of our real world.
Wide applicability of mathematics - to every human
endeavour;

Oh! Mathematics - You are the very soul of our
world!

Canto 19 the Mathematical beauty
 $a_0 x^n + a_1 x^{n-1} + \dots + a_{n-1} x + a_n = 0;$

$$(1+x)^n = \sum_{k=0}^n \binom{n}{k} x^k; \|a_i\| \cdot \|b_j\|, f(t)x = \sin \omega t,$$

Theorems, lemmas, axioms and Induction.
 $\text{curl } \vec{A}$, $\text{div } \vec{A}$ & $\nabla \phi$; Atoms of Vector Analysis;
 $\frac{\partial \phi}{\partial x} \hat{i} + \frac{\partial \phi}{\partial y} \hat{j} + \frac{\partial \phi}{\partial z} \hat{k} = \nabla \phi$ & surface integrals.

Circles, ellipses, hyperbolas, parabolas;
 and the whole family of curves.

$$\vec{A}(\vec{r}) = \frac{1}{c} \iiint \frac{\vec{r}'}{|\vec{r} - \vec{r}'|} d^3 \vec{r}'; \quad A(r) = \frac{1}{c} \oint \frac{d\vec{r}'}{|\vec{r} - \vec{r}'|}$$

$$\nabla^2 \psi = \frac{1}{r^2} \frac{\partial}{\partial r} (r^2 \frac{\partial \psi}{\partial r}) + \frac{1}{r^2 \sin \theta} \frac{\partial}{\partial \theta} (\sin \theta \frac{\partial \psi}{\partial \theta}) + \frac{1}{r^2 \sin^2 \theta} \frac{\partial^2 \psi}{\partial \phi^2}$$

Oh! Gauss' theorem & Stokes' theorem;
 & myriads of them in the sphere of Mathematics;
 $\iint_S d\vec{s} \cdot (\nabla \times \vec{A}) = \oint_C d\vec{r} \cdot \vec{A}; \quad \iiint_V dV \nabla \cdot \vec{B} = \iint_S d\vec{s} \cdot \vec{B}$

Man's work of eternity; the miniature cosmos.
 Oh! consumption of our fleeting existence;
 hallowed passions of the world.

Vector spaces and inner products.

$$\frac{1}{r} = 1 + e \cos \theta; \quad \frac{x^2}{a^2} - \frac{y^2}{b^2} = 1, \quad a^2 x^2 + b^2 y^2 = a^2 b^2;$$

conic section and quadric surfaces.

Computerized Mathematics in our land of Science;
 statistics and sampling theory; binomial & Poisson
 distribution.

Probability density functions & random variables;

$$P_k(t) = \lambda e^{-\lambda t} \int_0^t e^{\lambda \tau} P_{k-1}(\tau) d\tau; \quad P[N_{t_1}=k_1, N_{t_2}=k_2, \dots, N_{t_M}] = \frac{k!}{t^k} \prod_{m=1}^M \frac{(t_m)^{k_m}}{k_m!}$$

$$R_{\alpha}(t+\tau, t) = \int_{-\infty}^{\infty} S_{\alpha}(f) df \left(e^{i2\pi f_0 t} \int_{-\infty}^{+\infty} h(z) e^{2i\pi(f-f_0)z} dz + e^{-i2\pi f_0 t} \int_{-\infty}^{\infty} h(z) e^{i2\pi(f+f_0)z} dz \right)$$

$$(e^{+i2\pi[f_0 t + (f+f_0)\tau]} \int_{-\infty}^{+\infty} h(u) e^{-i2\pi(f+f_0)u} du + e^{-i2\pi[f_0 t - (f-f_0)\tau]} \int_{-\infty}^{\infty} h(u) e^{i2\pi(f-f_0)u} du)$$

$$\Delta = g P g^T, \quad R_x(t_1, t_2) = \frac{1}{T} \int_{-T}^T \int_{-T}^T R_X(t_1 + \tau_1 - T, t_2 + \tau_2 - T) d\tau_1 d\tau_2$$

Canto 20 First lux

I gaze into the aetral welkin on Earth;
Through! The resplendent starry night, with awe and
exaltation of divinity.

Oh! The sublime gulchitude; the lofty celestial
light.

I can feel all beauteous matter. What else?

I can feel the elegant and penetrating e/m
radiation.

Behold! the ethereal galaxies of millions of years
ago!

I can see past objects of eras before!

Oh! Majestic galaxies; Oh! August clusters of
stars!

How I feel for you! How I love you!
In the love of the Universe I live,

under the road of cosmic evolution I march;
O.h! Astronomy & cosmology - the purest of all sciences!

My senses are refreshed; my faith is strengthened.
Myriads of galaxies are irradiating;
thermonuclear reactions proceed,
in the almost - eternal time.

A fleeting existence we lead;
for beatitude and Truth we strive!

In the weird and happy realm of Cosmos;
atoms are flying erratically; atoms are smashed.
Astronomers are investigating, cosmologists are
debating;

Galileo, Newton, Cassini, Hubble, Einstein and Fred Hoyle
Lemaître, Gamow, Eddington, Hertzsprung and Shapley
seeking out the causes and effects.

Granto 21 · You cruel Fate

Fate! Behold!

Look at my blood-shot eyes!

Mutilate my lost Self!

Tear my lacerated heart out!

Satisfied? Glutting over your loot, then!

And you hostile Ordeal! You are so vile with
broken men!

You can but reject, diminish and hate;
Never can you cherish, give and love.

What am I? A lost soul in the infernal
desert of despair?

A defeated man from the sphere of life?

Into! Behold!

Look at my mournful eyes!

Tempest of agony! Rain of apathy!
Blow! Blow! Blow!

You lugubrious wind of Ego!
I am on the raft of Medusa;
drowned and carried away by the Tsunami
of desperation;

in the seething, abysmal sea of life!
My flesh, my heart, my mind - all sacrosanct
who will ever appreciate? Who will ever care?
Where am I? A paltry child in the family
of conflict!

Mutual distrust! Mutual disgust! Mutual disdain!
My mother can't stop but complain, scolds and disdain.

my father can't help but be awkward, be foolish
and be docile.

hants 22 Misery

my beloved forsook me; rejected me.
Diffidence and failures overtake me.
My mass of broken cells weep.
My ~~hope of love~~ is strangled and asphyxiated.
The gift of sharing I never receive;
yet I have given myself away. Lost!
Future? Happiness? Lost! Lost in chaos of loneliness!
Fracoes are waiting for me. Loneliness is creeping on me.
Selfishness is invading me. Hate is impregnating me.
No love lost? Hith! Garbage!
My abject life is doomed; my worthless heart
is ruined.
My molecules disintegrate; my soul is smashed.

Rejection! Diminution! Hideousness! Rage of inequality!
May I live in the land of Dreams?
Where is my pursuit of happiness and Truth?
A moron is all I am!
An imbecile is all they claim!

my father can't help but be awkward, be foolish
and be docile.

Stanza 22 Misery

My beloved forsook me; rejected me.
Diffidence and failures overtake me.
My mass of broken cells weep.
My ~~myself~~ life is strangled and asphyxiated.
The gift of sharing I never receive;
yet I have given myself away. Lost!
Future? Happiness? Lost! Lost in chaos of lovelessness!
Terrors are waiting for me. Loneliness is creeping on me.
Selfishness is invading me. Hate is impregnating me.
No love lost? Ah! Garbage!
My abject life is doomed; my worthless heart
is ruined.
My molecules disintegrate; my soul is smashed.

Rejection! Diminution! Discomfites! Rage of inequality!
May I live in the land of Dreams?
Where is my pursuit of happiness and Truth?
A moron is all I am!
An imbecile is all they claim!

I am but the usinine son of my preposterous father!

No! I will never resemble him!

He is the greatest dunce in my mother's eyes.

How I loathe the scenes!

Inebriated by television and radio is all I have to be.

No humour, no warmth, no vitality.

All I like is to be alone.

canto 23 the celestial light

Matter and energy are our constituents;
the physical entities of our Universe.

The romance of life - the most complex phenomena -
the cosmos.

Stars are emitting e/m radiation, created out from
thermonuclear reaction.

Supernovae are exploding catastrophically, ejecting matter
into the void.

White dwarfs are reigning; neutron stars are dancing.
Dramatic astronomical objects; quasi-stellar radio
source.

Exotic celestial demons - the black holes

Devouring stars and even galaxies; even light cannot escape.

Birthplaces of elementary particles and cosmic rays.
Ring nebula, Helix nebula, Horsehead nebula and scores of others.

Globular and galactic clusters in constant action.

Big bang! the Evolutionary model of our Universe.
Distribution of galaxies in cosmogony.

the cosmological red shift of the galaxies,
receding from each other with amazing speeds.

Relativistic cosmology and the curvature of space.
Space, time and gravitation, nature of matter and energy.

Quantum mechanics and nuclear physics applied to
the dazzling field of cosmogony;
Beauty and simplicity of Nature.

Astrophysical sciences and the 2.7K background radiation.
Exploration of the Cosmos: space probes in our
solar system.

Spiral, elliptical, barred-spiral and irregular galaxies,
and their associates - Seyfert and radio galaxies.

Lento 24 Weltanschauung

We sometimes are enshrouded by despair and woe;
agonized by the Omnipotent Fate.

Many times have we faltered;

Many times have we been thwarted and languished,
by our loss and defeat, under the bondage of self.

Many times have we been veiled by our improvident
outlook.

Our hopes are diminished. Our senses are inhibited.

Our world seems to be sombre and degenerate.

Yet, as our insight into life grows,
we realize that life is too transient to be
obsessed by personal joy or grief.

We realize that we have to give.

We have to discern into our external world.

We have to discern peoples; investigate their thoughts
and their cultures.

We have to develop a never-tiring joy of learning
and giving.

Let us remember that we are the most fortunate
generation, for we have been inherited the most
precious gifts of human civilization.

Let us recall that our fellow-men are but ourselves.

Brief our lives are, their bliss or misery depend on us, there is nothing left but to cheer, to give, to contribute and to ameliorate a better world.

Let us blaze with fervent zest of life.

We falter but we strive to stand.

We suffer rejection but continue to give.

This is the true spirit of mankind!

This is the acquisition of the ecstasy of life.

Canto 25 Eureka!

Man has always looked for his position in the Universe and his role in cosmic evolution;

on a puny, insignificant planet called Earth.

His life is abounding with fears, hopes, frustrations and fantasies.

His outlook is always obscured by morbid thoughts.

Yet, his curiosity and love of knowledge have ignited his flame of life.

Moreover, the species *Homo sapiens* always has an insatiable quest for Truth.

His zeal for quest of knowledge is enhanced;

His zest for life is promoted;
his aesthetic power and sense of beauty is refined.
A more liberal philosophy of life is evolved.
Man has become humble and catholic;
man has become humanistic and tolerant.

Absolute knowledge has vanished; dogmas have decayed.
The deep implications of the Uncertainty Principle.
Liberty and freedom we have to fight for.
Absolute knowledge is but our hazard;
and the end does not justify the means.
Truth is only justified by its end? No!
What a dangerous notion! What a destructive
idea!

May our Earth be peaceful and happy!
May our lives be beatific and consummate!
That's all we want!
That's all we have to do!
For Truth and Beatitude we strive,
(The above was written before June, 1977)

Canto 26 The World of Energy
The world of energy dances,
with a bizarre profusion of elementary particles.

Physicists' intent - the reconstruction of the world,
wave-particle duality and the Uncertainty Principle;
trains of electromagnetic waves & Einsteinian space-time.
Physical Laws arise from the chaos?

Physical Laws arise from order & harmony?

Galileo, Newton, Kelvin & Max Planck;

Schrödinger, Heisenberg, Dirac or Max Born.

Newtonian and Quantum Mechanics in a ball.

The super-giant accelerators & the J-particle,
beside which physicists toil & construct.

The magic of Physics, the love of life,
with Einstein, Fermi, Feynman & C.C. Ting.

Moving after with the hierarchy of science,
for which physics apply.

von Neumann & his mathematical quantum mechanics,
& the eerie microscopic realm.

Human inventions & discoveries from our physical world,
perceiving the ever-changing Universe,
& other spatio-temporal relations.

Lo! The beauty of Physics, the puzzling Universe,
analysed in human terms & perception.
Quest forever.

Canto 27 A deception

To arch over the dewy bow of hope;
and be inebriated with the euphoria of a dye.
To deceive eternally through the cross,
or the Communist Manifesto in a fact.
Ask not for bliss and being,
but tears and laughter in the tragedies of living.
Seek not for love and giving,
but woe and despair in reward of seeing.
Optimism? Affection? A fiddle?
Hold! No! They dwindle.
Less and less;
Less and less! Diminished!

All appear to be a deception?
To any without exception.

I faint,

under the garden of Humanity.

Nothing can save?

nothing can save!

Destruction, pollution, utmost brutality!

All substructures, structures and superstructures vanish
Under the lethal sword of wars.

Blood-shedding, ruins, crying and laughing!
Let your dragons lead you,
and you can destroy the whole world!

—Bante 28 Limerick

And I, ^{unlike}
compose this poem under the inspiration of a can of beer
or else.

I am reduced to nothing again.
I just feel that I am very old, very calm.
Yet how seething and revolting I am!
I have strength to fight the world,
but I am weak to fight myself!
I am vain, too vain to be approved!
I know everything for I know nothing!
I ~~mean~~ ^{mean}!
I am crazy! I am just crazy!

My head aches,
I let my feelings to control me, tyrannize me!
My mind is least!
My Self is worthless!
I compose poems, I write essays!

I proposed Dialectical Pluralism.
Out of vanity? I don't know.
Lo and behold,

To are let spontaneity guides me,
and be for I am so restrained.
To do let emotions overtake me,
or the for I am too rational.

I drift and flow along the River of Days
under the ruby-colored sky.
Gradually, all go black, and I weep.
I dream that I fall into an abysmal black
grasping nothing but vacuum.
Lost forever! Lost in my irrevocable past.
I am exhausted,
my creativity, my hopes, my everything are gone
to the Land of Unknown.
I wish I could go to an exotic land,
and lost in the ocean of people,
to the point of return.
Entropy assaults me,

irrationality goes hand in hand with me,
to the domain of irreversibility.

Insecurity overflows me.

I am so vulnerable, I am so brittle.

All drive me insane.

The world creeps on,

I drop out.

Being is tragedy!

Being is woe!

Being is despair!

Being is being!

Dialectical Pluralism - a general introduction

Dialectical Pluralism is a philosophical model of Reality. It is, in itself, an analytico-synthetic system with metaphysical, scientific and humanistic characters.

Reality is an open, infinite and complex system embracing the totality of human experience, physical and non-physical (if any) processes, phenomena and entities.

Reality consists in various aspects (may be infinite but not less than two) in which some must exist in complementary but simultaneous poles. It is many-valued and some of its aspects are mutually exclusive.

Dialectical Pluralism is a mode of philosophical inquiry into the nature and essence of Reality.

General Methodology of Dialectical Pluralism

Dialectical Pluralism is in itself open and infinite. It is only a mode of philosophical inquiry for Reality can be approached through different perspectives. It does not deny other philosophical schools but it holds that any philosophical system, including itself, is incomplete and inadequate. Any attempt to formalize all knowledge is futile for a finite number of axioms in a hypothetico-deductive model to explain the totality of Reality are impossible. The following is a tabular methodology of inquiry:-

Remarks:-

1. It is highly probable that the original stuff of the world is matter. Mind (as well as life) evolves from matter but transcends matter and cannot be described solely through materialism. This does not mean a relapse to vitalism for the transcendence from physical level to bio-physical level (or bio-physical to physico-mental and so on) may be resulted from the emergence of a new (novel) set of properties because of the change in configurations during the transition of one level to another. Besides, it is probable that these transitions are quantum and discontinuous. Hence satisfying an infinite number of proportions.
2. Agnosticism and universal skepticism are probably the most scientific systems of Reality and the practice of which may lead to extreme nihilism.
3. The thresholds may be bifurcated and may change from time to time. Yet, these thresholds are imposed on human beings for being human beings. In other words, they are human limitations on perception and knowledge. Physical (natural) thresholds may exist.
4. Different philosophical systems with dissimilar assumptions only represent parts of the perspectives of Reality. They are closed and cannot explain ^(every facets) everything of Reality.
5. Nearly all models of the world involve metaphysical assumptions, even materialism and realism. Strictly speaking, no schools of philosophy can involve no metaphysical assumptions.

6. Science cannot prove its assumptions. In other words, science is only self-consistent for scientific method is an assumption itself. We cannot prove the physical laws are true through physiological study of perception for we have used physical laws to investigate the nature of perception. There is no *a priori* reasons to assume these studies are absolutely true. This also presents a limit to human knowledge.

7. ~~CS~~ Multiple dialectics are applicable to certain levels and sublevels only, especially at human level and 'at the metaphysical level, e.g., 'evil' implies the existence of 'good' and 'good' implies the existence of 'evil' - no good, no evil and vice versa. Yet, to apply this concept to our physical world ^(maybe) is meaningless for it is 'neutral'.

8. Love is a relatively novel quality emerging above the bio-physical level. Moreover, it seems to oppose the force of entropy. On closer scrutiny, love is intimately connected with mystico-sexual feelings, metaphysical threshold and dialectics.

26th February, 1978.

Postscript

'Dialectical Pluralism' first occurs to me in December, 1977. Before that time, I was thinking another model - dialectical agnosticism. Yet, I soon abandon that model. Anyway, I would like to stress that 'dialectical' does not assume the meaning of classical dialectics in my usage. It serves to emphasize the fact that Reality is many-valued and some of its aspects are complementary.

Besides, I am indebted to the following whose writings and philosophies inspire my own thoughts and views:-

Mysticism, love, creativity and entropy - an introduction

1. Mysticism is a specific problem in dialectical pluralism. It is
2. intimately related to love and entropy. It seems that mystico-
3. sexual feeling (physical and 'spiritual union with any entities in the
4. Universe or the Universe itself) is a manifestation of the essence
5. of entropy and love, namely, homogeneity (randomness and 'all-
6. distributive) and unity (feeling of reincarnation). [Other poles such
7. as creativity can be included; in other words, multipoles can be
8. admitted]. Moreover, it seems that mysticism transcends both love
9. and entropy. Dialectics may apply to mysticism: - mysticism is
10. a means of attaining unity with the 'Infinite' involving the
11. giving and pouring of Self into the world, i.e., one has
12. to distribute oneself to infinity in order to achieve unity.
13. Thus, a feeling of reincarnation and a sense of omnipresence
14. will culminate.

Remarks

1. I think this transcendence of Self can be attained through
sexuality, thus transforming the vision of our beloved and
the world. The feeling of reincarnation and omnipresence and
mystico-sexual religious feeling can be achieved, in general,
through love and physico-spiritual union with our beloved.
2. Religions serve as other means to attain mysticism. Yet
through this process, they always tyrannize sex and call
for unnecessary assumptions and dogmas.

3. the 'Infinite' does not mean God (at least in the religious sense)
It only represents Reality beyond the metaphysical threshold.

26th February, 1978

Critique of Dialectical Materialism (Introduction)

1. Dialectical Materialism is the basic theory of Communism.
2. It is an outgrowth of the philosophy of Hegel and materialism.
3. It claims itself to be a scientific theory of the world.
4. and resolves itself to certain dogmatic assumptions.

5. Remarks.

6. 1. It holds that everything (every entity) in the Universe develops
7. in accordance with dialectics. This assumption is held as the
8. sacred Truth of the Universe. However, it is essentially a
9. metaphysical assumption, i.e., it has no adequate scientific evidence
10. to support it.
11. 2. The claim of materialism is also a metaphysical proposition.
12. for we have no right to say whether the ultimate constituents
13. of the Universe are matter or mind.
14. 3. Dialectical materialism is a metaphysical theory rather than a
15. scientific theory. It is inspired by ethical issues rather than
16. strict scientific analysis. Besides, it is a 'closed' theory.
17. 4. In dialectical materialism, the application of dialectics to the world is
18. quite arbitrary. It assumes that one pole 'always wins'.

On cosmology (Introduction)

Cosmology is the study of the origin of the Universe. Modern cosmology, incorporated with modern physics and astronomy has shown that the 'Big-Bang' theory is the most probable theory accounting for the expansion of the Universe as observed. When we extrapolate time backward, we reach a point of singularity beyond which we cannot know or analyse any form of knowledge, i.e., the conditions before big-bang and the triggering mechanism of big bang etc. This is probably the spatio-temporal threshold: beyond which an infinite no. of hypotheses satisfying the condition. Similarly, the future of the cosmos may have a spatio-temporal threshold.

1st March, 1978

A question

Does infinity have some correlation with the impossibility to determine a unique solution? Can we say that the infinity of hypotheses correspond to the open questions of Reality?

1st March, 1978

Human questions.

1. A. Is an utopia possible? Is there any panacea to human problems?

2. REMARKS:-

3. 1. I do not think there is any panacea to human problems.

4. 2. I believe that certain solutions can apply to one situation, i.e., the
5. choices are manifold.

6. 3. An utopia is a secular heaven. It is static, yet it is possible.

7. B. Mysticism - In mysticism, infinity corresponds to the state of
8. nothingness. It is essentially dialectical.

9. 5th March, 1978

10.

11. Postscript. Is science the answer to our age?

12. Science is the necessary but not sufficient condition to
13. the problems of our age. I think the real problem lies
14. in population control. Besides, we should look for a new
15. religion or new philosophy which transcends science and
16. metaphysics, embracing the field of exact and inexact
17. philosophies. I do not believe we can formalize all human
18. knowledge. Yet, I should stress that we should formalize
19. human knowledge as far as possible, as well as 'capitalists'.

20. I agree to the communists' idea that the material
21. basis of human civilizations should be strengthened and
2. material adequacy is the necessary condition for human
2. happiness.

Aftermath

The human race, viewed as a whole, appears to be contradictory and pluralistic. Great systems of metaphysics, I think, are built upon (or partly) this view. They deny 'appearance' as illusions all together due to the apparent contradictions in their Aristotelian logic. The remedy for this view, I think, lies in the adoption of pluralistic logical systems and scientific theories of epistemology.

 源 綠 自 所 識

A short essay on metaphysical problems.

Here, we are concerned with two issues, namely - ~~Does~~ metaphysical question exist? 2) If it exists, then is it necessary to study it?

We divide these questions into several aspects. First, let us consider the theoretical and practical aspects of the questions. There are two prevalent schools of philosophy denying or decrying the existence of metaphysics - positivism and dialectical materialism. First of all, positivism claims that anything that cannot be verified is metaphysical and equates meaningfulness to confirmability. Dialectical materialism is fond of condemning other systems of philosophy as metaphysical. However, I think they are not well justified. Dialectical materialism is surely metaphysical for the question of matter and mind is already metaphysical. Besides, the belief that all entities in the Universe develop according to dialectics is metaphysical and non-scientific (in a strict sense).

If we assume the ultimate constituents of the Universe is matter, then we have already made a metaphysical assumption. I have no desire to refute this assumption. In fact, I regard this assumption is probably justified to a certain extent. I believe that the origin of our Universe is material. Yet, what precedes this origin? Mind? Matter? Nothingness? No one knows. Hence marxists have no right or a priori reason to claim that dialectical materialism is scientific. Moreover, dialectics is

a very mystical view of Reality. I think the Marxists have
'scientized' or 'rationalized' their metaphysical basis.

Positivism denies metaphysics for these problems or questions
cannot be verified. Yet, it does not mean these metaphysical
problems do not exist. Besides, the methodology of positivism
with its assumption is metaphysical!

The practical utility of metaphysics lies in the fact
that it stimulates creativity and thinking as well as satisfies
the emotional need of man. If a school of philosophy clings
to all metaphysical speculations, it will make no progress at
all. If metaphysical speculations are stifled, they will appear
in a rationalized form or in other destructive forms.

It is true that in science, we should keep metaphysics
out as far as possible; otherwise, science will be contaminated.
The true methodology governing science should, in the
present stage, be critical realism and agnosticism. In
conclusion, metaphysics can be used as an inspiration for
science but not the guide for science. This statement may
apply to ordinary life as well.

11th March, 1978

無恨愁？

情義何消頹？

金石非久留。

流水東逝去，

恨愁復回頭。

書於夏曆戊午年二月初二日 (11-3-78)

A short account on current world's problems

1. How to help the world, especially the Third World? They are not self-sufficient. Population has to be reduced. Food supply has to be increased. Agriculture and industry should be expanded.

a. The necessary condition lies in the reduction (decrease) of the rate of birth through practices of birth control. Any opposition to this movement is impractical and unwise, at least under the present condition.

b. Energy sources and natural resources should be manipulated economically and wisely. There has been a shortage in these resources. Solar energy should be exploited.

c. After solving the materialistic problems of humanity, we have to solve the spiritual problems of mankind. Yet, these two solutions should come hand in hand with varying emphasis according to the condition required.

17th March, 1978

My condition in the Baptist College

I am quite unhappy in the Baptist college. It lacks the atmosphere of a university. The spirit of free inquiry and discussion is meagre. The mode of inculcation and imparting of knowledge is as traditional as an old-styled primary school. Instead of active participation in the learning process, the students act like mere passive receptors.

I spend most of my time in reading books in the college - philosophy, science, arts, religion and scores of other subjects. Somewhat, I feel very lonesome and unloved. I am haunted by the spectre of inferiority. I find myself in a quite embarrassing situation - I am alienated from the students ^{in classroom} of my department. The academic standard of the Physics Department is poor. Appraisals are meagre. College life in the Baptist college is rather dull and even boring. One of my happiest moments is to watch beautiful girls (alas, only a few) in the lounge! Two or three of them have very feminine qualities. . . . How I long to be with them!

24th March, 1978

Time and age

Hope can never be;
in a frosted heart.
Is Fate ruling the world?
No greater love can face.
Age removes more,
of a sadder soul.
Yet anguish never withers;
time has no power.
So does wisdom decay,
in a short day.

24th March, 1978

Freedom is the recognition of necessity? - a question

It is very tempting to say that 'freedom is the recognition of necessity and the transcendence of necessity'. Yet, I think this statement applies to a certain extent only. First of all, there are many philosophical questions regarding with freedom and necessity. It seems that 'freedom is the recognition of necessity' is a relapse to mechanism.

The Prelude to Marxism

Marxism is/was inspired by its ethical claims rather than its scientific claims. First of all, it is a system of secular Christianity. It resembles Hegelian logic: - 1) the use of dialectic, 2) the analogy between the 'Abstrakte' and 'the communist stage'. Dialectical Materialism, by its own nature, is an aspect of reality, not the aspect of reality. It has its own limitation.

On the methodology of working of the various societies in HKBC

The working spirit of the central committee of the Physics Society (and various societies of the Science and Engineering Departments) is generally low. The members of the central committee seem to be caught by pragmatism. They favour short-lived projects with immediate results. They stress strongly that the participants of their organized functions should be as many as possible. Yet, they can never organize such functions. The Physics Society is particularly weak in this aspect. The end of the committee, they claim, should be 'to serve all Physics students, to provide welfare for them'. Though some of the committee members are working (virtually) towards this end, I doubt whether they can achieve anything.

The committee members are in general, haunted by phobias. They are afraid of failures. Uncertainty will always scare them. They set their ends as low as possible so that they can attain their goals easily and swiftly. Regarding with the present conditions in the Baptist College, I think they are partly right and can be justified in a certain sense. However, I do not think this will lead to progress or development in a long run.

The conflict lies in the fact that their goals are self-contradictory. They want to involve a greater number of participants in the functions they organize. Yet they are too

concerned with the nature of the project and its consequence.
As a result, they lack determination and courage to initiate
huge projects or even moderate projects.

1st April, 1978.

On the probability of the emergence of life.

Some scientists (I think the pious scientists) carried out
calculations and showed that the probability of the emergence of life
was vanishingly small and concluded that life was created,
rather than evolved. However, I think they have no right to
say that for life has occurred and the probability becomes
unity. It is not justifiable to say that the probability of
the emergence of life is vanishingly small for it has occurred.

1st April, 1978.

Being and becoming - remarks

1. Life is irreversible :- all processes in the Universe are irreversible. They are all indeterminate in the future but become determined as soon as they come into being. We cannot reverse our life (except at domains of singularity where Reality becomes capricious).
2. We can assign probability to all events in the 'future'. All events in the past have probability unity.
3. We can never predict exactly when and how an event may (will) happen.
4. If it is to be, is it up to me?

1st April, 1978.

Questions

Being and nothingness
infinity and nothingness

My Autobiography (17-19) - a prelude

I was seventeen on 30th January, 1975 and was in Form Five (5C) of St. Joseph's College. I organized a project 'Basic elements of Astrophotography' for the centenary exhibition of St. Joseph's College. Important events were:-

1. the appointment of the Astronomy sectional head of Science Society in 1975.
2. School representative for the Joint School Astronomy Club in 1975.
3. Demonstrator of the 8th J.S.S.E. for 'Pollution in H.K. & its remedy'.
4. Demonstrator of the 1st H.K. Astronomical Photographic Exhibition.
5. Merit in the 1st H.K. Astronomical Photographic Exhibition.
6. Chairman of the Science Society, H.K. St. Joseph's College.
7. School representative of the 9th J.S.S.E. Preparation Committee.
8. Director for Deep-Sky Section of HKAAS. (1975-76)
9. Vice-chairman of the 1st H.K. Astronomy Convention

2nd April, 1978

I spot a very feminine girl. I think she is a sophomore or junior (or even senior) student, belonging probably to the Accounting Department. She ^{always} sits in the canteen on Saturday after eleven. She is tall and beautiful. Her skin is snowy-white. Her eyes are exceptionally charming and black. Sometimes, I can find her sitting in or walking across the lounge. Oh!.....

N.B. She may belong to social work or sociology department. 2nd April, 1978

One of the hindrances to the enlargement of man's range of values is the individual's preoccupation with his own subjectivity. One direct consequence is the imposition of self on the world of values. The Ego finds comfort and joy only in values conforming to its acceptable frame of reference and tends to rationalize or discard opposing ones. Thus, the means is always justified by its ends, and in fact, the 'world' is used as a means to achieve one's ends. The universe, at large, appears to be in harmony with one's strivings and desires. Yet, the Ego finds no value besides those pertinent to itself. Moreover, it cannot explore the vivid and objective world of values for it has imprisoned itself in a rigid and impermeable fortress. Prejudice,

1. bias and dogmatism usually accompany the preoccupation
2. with one's subjectivity and self, hindering the discovery of
3. differences, universal love and impartiality.

4. written during a quiz in
5. Mid-March, 1978.

Nature

When I am in the cradle of Nature,
a fiery rapturous ecstasy bursts from me.
With the sweet refreshing fragrance of blossoming flowers,
and the mellow rhythm of the waterfalls,
She depicts Her exquisite Pulchritude to all mankind.
The lovely dewy bow on the virgin grass,
matched with the gaudy morning sky,
manifests Her Truth regally.
The heavenly streaks of golden sunbeams
from the rising Sun,
shine with celestial elegance,
kindling the ever-burning fire of human curiosity.
With the dark, solemn mountains, silhouetted against the
graceful setting Moon,
Nature declares Her profound motto to all,
'For the quest of Beatitude, Truth, Pulchritude and Humanity.'

31st March, 1976.

written in St. Joseph's College, during an English period.

The critique of myself

I start to write this 'critique of myself' accidentally. My mind is blank and I do not know what I am doing. Recently, I am obsessed with my worthlessness and my feeling of senility. I acutely feel that I am old, very old - I can do nothing and am impotent of the situations encountered. Well, I want to be frank to others. If I cannot, I hope I can be frank to myself.

In the first fork, I doubt that whether I am vain and self-defeating. I always feel like a rover, a poor wanderer who has nothing with me. I am worthless and old's uncertainties lie before me and I am falling into a bottomless abyss. I am like a mass of worthless cells disintegrating. I wish that my life and my consciousness sore callous and love will never creep into my life. If I have never heard 'love' in my life, I would not have cried and felt. Now, I want to cry but cannot cry. One of the worst feelings is the feeling of stupidity and inferiority, I cannot help but accept.

Somehow, I long to love and to be loved. I do not know whether I give in order to receive, though I am convinced that I am not selfish regarding with giving. Yet, I strongly doubt that whether my Unconscious does agree or not. Besides, I am fond of

organizing huge functions (yet, quietly) and asserting my 'glorious' achievements (this amounts to only a few of my 'glorious' achievements) before a moderate mass of people. Privately, I find that at least part of my motive springs from my intention to impress a girl or so. I do not know whether the aims or objectives I laid down on paper are subordinate to this motive or not. However, I think much of my motive is to share my ideas with other people. On the whole, my motive is to give my views and ideas to other people.

I must admit that when I propose the plan of the 'First Hong Kong Science and Culture Festival' and want to organize it, part of my motive lies in the (my) will that I want to impress a very feminine girl with whom I am not acquainted. Frankly speaking, I want her to love me and to share life with me. Notwithstanding, I know my chances are vanishingly small. First of all, we do not belong to the same department. Our chance of acquaintance is small. Secondly, many boys surround her. I feel that I have not got the qualities to impress her. Besides, my field of study is too impractical. If she knows me, she has no reason to love me. Moreover, she may be older than me. The condition is hopeless.

I may be too childish, too immature & too naive.

1. The ordinary procedures of life, many claim, are schooling,
2. going into a university and earning a lot of money. Under
3. these orthodox views, human passions are simple. Under
4. these traditional versions, people are not aware of their
5. instincts, their motivations & their actions. I just feel that
6. they are not aware of their own existence. In some sense
7. I think maturity is piecemeal and relative.

2nd April, 1978.

1. Does literature (and culture) depend on economic
2. factors?

1. I think that literature depends only indirectly on
2. economic factors. For instance, if we have no hormonal
3. secretion, we have no lyrical poems. We can ^{only} argue that
4. hormonal secretion depends indirectly on economic basis.

My methodology of working

I believe that practice should always go with theories. Theories without practices are metaphysics; practices without theories are ignorance. I always set my ideal as high as possible but expect the outcome to be a failure. In the whole process of working, I can work as hard as possible, though remain unsatisfied. I do not like to lay down claims or 'promise' simply because the future is always filled with uncertainties.

2nd April, 1978

An approach to an exhibition: - Science and its integrated world view.

Section A Modern Science and our physical world.

1. Cosmology - the Big Bang Theory and alternative theories; time & space; matter and energy; galaxies, stars, black holes & atoms.
2. Theories of the world: - relativity; quantum theory; e/m theory & other theories of physical science.

Presentation: -

Materials should be introduced in parallel (simultaneously). Flow-charts & sequential diagrams should be used. Symbols & cartoons should be employed.

Presentation: -

Materials should be introduced in parallel (simultaneously). Flow-charts & sequential diagrams should be used. Symbols & cartoons should be employed.

- 1 Section B. Life & Evolution
- 2 Section C. The emergence of culture.
- 3 Section D. The evolution of scientific thoughts.
- 4 Section E. Philosophy & the Modern world.

Remarks:-

1. The exhibition should be integrated and as compact as possible
2. The evolution of the universe is presented in a temporal order with modern science as beginning & as end.
3. Photographs, slides & posters are quite important in this exhibition
4. Demonstrators will be needed.

2nd April, 1978

Remarks, if any

Hand-drawn sketches of the letters 'l', 'o', and 'e' on lined paper. The letter 'l' is a simple vertical line. The letter 'o' is a circle with a vertical line through its center. The letter 'e' is a horizontal line with a circle at its right end.

The image shows a piece of aged, light brown paper with a visible texture. On the paper, there are four hand-drawn sketches of numbers in dark ink. The numbers are arranged vertically from top to bottom: '1', '2', '7', and '8'. The '1' is a simple horizontal line with a small tick mark at its left end. The '2' is a horizontal line with a small circle at its right end. The '7' is a horizontal line with a short vertical line segment at its right end. The '8' is a figure-eight shape formed by two loops.
