PERFORMANCE RATING	3
CORE COMPETENCIES	Rating
CREATIVITY Employee Comments: Conceive, create and experiment with novel user-centered research methodology combining traditional market/user trial and usability studies to optimize the "yield" and quality of the data collected. Directed and guided research vendors to implement the design of the innovative research methodologies through the execution of the study. These included a 3-phase Omnia 2 usability studies and user trial with Swype and selected virtual text input methods, large scale competitive physical QWERTY keyboard user performance and satisfaction study (using group sessions), competitive touch UX design usability study and Samsung Camera UX study and SideKick Concept and User Behavior Research. Evaluator Comments: see below	3
CHALLENGE Employee Comments: Utilize consumer usability research and heuristic usability evaluation results to validate some of the anticipated UX problems of current physical ergonomics and UX design. Challenge designers to address and propose solutions to resolve those problems, to improve current design or to reconsider design approach for future generation of designs. This included usability studies of Cube UX, TouchWiz 2.0, Behold II (Samsung first attempt to UX design differentiation on top of generic Android UX), Swype, as well as various usability studies to support design development of BTQ, Omnia 2 and BTQ2. Evaluator Comments: see below	2
SPEED Employee Comments: Initiate, plan, execute and complete user-centered research with short cycles. Reduce planning cycles in urgent studies to less than a week. Utilize "Just-in-time" planning of critical topics to be tested with rapid turnaround of quickly changing focus or situations. Use quick "critical finding briefs" to disseminate the results in less than a week so that the results can be used by R&D and the Design Groups quickly and effectively to change the UX or product concepts. Examples of the quick runaround critical briefs with 1 week or less turnaround from planning, execution and report included BTQ usability study critical briefs, Cube UX study, Browser Zooming Study, Heuristic Usability Evaluation of Behold 2, and Verizon BTQ2 QWERTY design research. Evaluator Comments: see below	3
STRATEGIC FOCUS Employee Comments:	2

Focus on the strategic user-centered research of both Samsung and competitive products in the market to support evolutionary improvement and prepare breakthrough design development of iconic WOW products. Identify critical usability issues in strategic and iconic products through user-centered research so that Design Center and R&D can fix those problems before launching the product into the market. Generates in-depth knowledge of user behavior of consumer electronic devices and services. Establish performance benchmark for best-in-class UX and physical ergonomics design of CE devices.

The examples included identifying critical usability issues of BTQ, Omnia 2 and BTQ2 during design development for effective design decisions by usability studies of the respective devices, applying the learning from Best Practice research of mobile QWERTY design, Touch UX design to future product/UX design through competitive UX research of physical QWERTY, Touch UX and Virtual text input methods.

Evaluator Comments:

see below

SIMPLICITY

Employee Comments:

Strive to simplify the presentation of complex research study (methodology and results) in an understandable manner to the appropriate audience. Prepare abridged or executive summary of research for quick dissemination and understanding of implications. Summarize critical high-level learning in email with attachment of detailed results and analysis.

Examples of "abridged" version include the competitive Touch UX design research report between iPhone 3GS, Palm Pre, HTC Hero, LG Versa, Motorola Droid and Cliq and the executive summary for the comparative study of Samsung Mobile QWERTY key-map layout usability study. Other examples included most of the reports released through email with concise summary of results, interpretations and recommendations.

Evaluator Comments:

3

SELF-CONTROL / EMPOWERMENT

Employee Comments:

Commit to the best quality user-centered research by personally engaged in the end-to-end research process from conception, design, development of protocol and measurement criteria, execution of research, data collection, validation and analysis, interpretation of results, recommendations and applications of results to design development. Initiate and pursue key strategic user behavior research proactively as related to future business goals. Conduct in-depth advanced data analysis and interpretation on data collected for user-centered research when they were beyond the capability or scope of the research vendors.

Examples included the research completed and issued by STA UX. Mobile QWERTY Design Best Practice - Competitive Samsung QWERTY key-map and layout usability & Competitive QWERTY performance and satisfaction & Recommendations; Competitive Touch UX Design Usability Study -iPhone 3GS, Palm Pre, LG Versa, HTC Hero, Motorola Cliq and Droid.

2

CUSTOMER FOCUS

Employee Comments:

Collaborate closely with carriers' UX teams to improve the design and usability of our products for them and increase their confidence in our capability to deliver best-in-class user experience.

Examples include the sharing of QWERTY Best Practice Research results with Verizon and AT&T UX and Product teams, collaborating with Verizon UX teams on usability studies of BTQ, BTQ2, Glueon2, Isotope, Omnia 2 and Swype.

see below	
CRISIS AWARENESS Employee Comments: Plan user research studies with backup research topics and fallback protocol/methodology in anticipation of sample delivery issues, prototype software and hardware problems. Respond flexibly to changing research requirements and environment by adapting protocols to focus on pertinent user behavior. Examples included adaptation of QWERTY measurement protocol in BTQ2 QWERTY research when delivery of prototypes was delayed until the day the study began and problems with the software in the prototypes appeared. In another QWERTY performance study, some of the devices used for the study had different problems (software, coverage, email account) and testing procedures had to be modified in consultation with internal and external expert researchers to continue the study without significant loss of validity. Evaluator Comments: see below	3
CONTINUOUS INNOVATION Employee Comments: Makes continuous improvements of user-centered research process in planning, execution, data collection and analysis by closely engaging in research study and evaluating the study methodology, techniques and procedures to save time and maximize impact and work done without significant sacrifice in validity and quality of research. Examples included maximizing the use of data collection from user-centered research by running auxiliary usability sessions with backup or floating respondents from the study, employing a just-in-time scheduling, prioritization and optimization of different research questions and topics. Evaluator Comments: see below	3
TEAMWORK Employee Comments: Collaborated with Strategic Marketing Research Team (STA), Product Planning (both HQ and STA), Carrier Account teams (STA), Design Center (HQ and SDA), Customer Satisfaction Team (STA & HQ) on a wide varieties of usability studies, focus group studies, product concept testing and user-centered research. Examples included proactively supporting user and market study for different teams and products (Bluetooth headsets with STA Accessories Group and Strategic Marketing, Omnia 2 & Swype usability with STA Strategic Marketing and Verizon Account Team, Ticker Tape Product and UX concept with STA Strategic Marketing, Product Planning and Verizon Account Team, BTQ and BTQ2 with HQ Design Center, HQ Product Planning, Mobile QWERTY Design with HQ Design Center, HQ & STA Product Planning and STA Strategic Marketing. Evaluator Comments: see below	2
LEADERSHIP Employee Comments:	3

Hung, Sang

Advocate quality end-to-end user-centered research as cornerstone to support UX and product design development. Establish a rigorous and disciplined user-centered research program by setting examples to both research vendors and internal stakeholders, focused on both immediate and longer term business needs.

Demonstrated how research analysis and interpretations should be done correctly in various projects (e.g., competitive ergonomics of Samsung Mobile QWERTY key-map layout through paper prototyping, competitive QWERTY user performance and satisfaction study)

ACCOMPLISHMENTS & GOALS

ACCOMPLISHMENTS

Employee Comments:

Major accomplishments:

- 1.) Verizon BTQ Design Development Usability Research (2 iterations) Impact: substantially improved UX, physical ergonomics and QWERTY keyboard.
- 2.) Cube UX Usability Impact: general awareness of utility versus usability of Cube UX and setting direction of what not to do in TouchWiz 3.0
- 3.) Verizon Omnia 2 Iterative usability study and user trials Impact: substantially enhance usability and physical ergonomics of product
- 4.) Mobile QWERTY Design Best Practice - Competitive Samsung QWERTY key-map and layout usability. Impact: validation of Samsung Mobile QWERTY design key-maps compared to competition.
- 5.) Mobile QWERTY Design Best Practice - Consumer Perception of competitive QWERTY devices. Impact: identification of salient design features of different devices designers can learn from best and worst practices from both our products and competitors' products.
- 6.) Mobile QWERTY Design Best Practice - Competitive QWERTY performance and satisfaction & Recommendations Impact: HQ Design Group incorporates results into their newest physical QWERTY guidelines. Knowledge of best and worst practices of QWERTY keyboard design and ergonomics. Benchmark for future design development of QWERTY keyboard.
- 7.) Mobile Messaging User Behavior including messaging usage (text, picture, email, IM, SNS) from various study, unified inbox and contact list, messaging UX design. Impact: knowledge of user messaging behavior for future development of messaging products/services.
- 8.) Competitive Touch UX Design Usability Study - Impact: knowledge and understanding of touch UX design and usability issues of iPhone 3GS, Palm Pre, LG Versa, HTC Hero, Motorola Cliq and Droid. Benchmark for future touch UX design.
- 9.) Verizon BTQ2 Design Development Usability Research Impact: substantially improved QWERTY keyboard decision of [Send], [Clr], and [End] keys (constraints of mandatory [Send] and [End])
- 10.) Comparative heuristic usability evaluation of Behold 2 Impact: awareness of Behold 2 usability problems and learning for design development of Behold 3 and Samsung customization of Android platform.
- 11.) Usability studies of Samsung M550 for Sprint, Samsung A257 for AT&T, LG Dare for Verizon, Samsung Isotope. Impact: establish benchmark usability performance
- 12.) Other miscellaneous studies included Key trip force study using AT&T Crunch, a couple of heuristic usability evaluation on different virtual text entry methods.

Evaluator Comments:

AREAS OF DEVELOPMENT

Employee Comments:

Continue to develop a best-in-class user-centered research program at STA to support continual improvement of Samsung products/services UX and design development of strategic and iconic products/services. Establish a process of validating usability of strategic products for different carriers and a process for validating physical QWERTY keyboard design.

Evaluator Comments:

FUTURE GOALS

Employee Comments:

Become a world-class user behavior research and UX design strategy expert through acquisition, application, sharing and dissemination of disciplined scientific knowledge to meet the business needs of the company. Establish a world-class user behavior research center for Samsung in North America to support product/service design development and improvement.

Evaluator Comments:

OVERALL COMMENTS

Employee Comments:

Building human factors and UX leadership position through user knowledge derived from quality behavioral research rather than opinions. Have played a much more proactive role in defining, directing and ensuring the strategic focus, truthfulness and the quality of user research.

Evaluator Comments:

Sang has been an individual contributor within STA focusing on User Interface and Experience. Sang has acted as more of a consultant, advisor and research coordinator with HQ UX and with customers/PM teams such as Verizon (primarily). I would like to see Sang take more of a leadership position than a reactive position when it comes to UX and human factors. He needs to be more prescriptive and vocal to enable Samsung to achieve a leadership position on UX in the US market.

OVERALL RATING :3

eMBO: - N/A

Performance: 3

Capability: 2.64

TOTAL: $3 \times 0.6 + 2.64 \times 0.4 = 2.86$ Points (Evaluation Ratio: Performance 60% + Capability 40 %)

☐ I Acknowledge and I agree

☒ I Acknowledge but I do not agree

Building human factors and UX leadership position through user knowledge derived from quality behavioral research rather than opinions. Have played a much more proactive role in defining, directing and ensuring the strategic focus, truthfulness and the quality of user research.
