3.0

CREATIVITY

Employee Comments :

The surge of product experience research request from HQ (over 50 in 2014 compared to 16 in 2013) strained the resources and budget of the team. With the 300 increase in quantity, the scope of the research requested also increased in scale and time commitment from participants dramatically. For research that can only be conducted with internal employees for security reasons, it became very difficult to recruit participants for research with extended time engagement even with the standard monetary incentive. I started to double up the in-person research sessions as training sessions for internal employees and found this creative way of recruiting internal participants worked much better than offering monetary incentive alone.

Impact: this approach Increases the participation of internal employees in product experience research and at the same time provide training to participants. It proves to be a win-win for both employees and the company. Internal employees can use their participation to fulfil training hours requirements and learn our own products in depth, providing invaluable educational experience for them. With the success this year, I plan to formalize this product research approach next week for internal employees. The increased knowledge and insights will further enhance UX of our products and services.

Evaluator Comments :

Sang created a lot of great use cases for how to conduct consumer research with limited resources and time.

Page 3 of 15

CHALLENGE

Employee Comments :

I make use of the opportunity of a large-scale user research to try out different recruiting method we have not used before; try moderating a large group extended-time sessions (up to 20 participants in 3 hour session moderated by one researcher) and use Wi-Fi enabled tablets or phablets to capture data from respondents in a scale supposedly supported (but not) nby the Wi-Fi network within STA.

Example: To increase efficiency of recruiting respondents for large-scale user research (Apps Settings/Settings Nov 2014), I evaluated our traditional method of recruiting using online survey as well as several online sign-up tool for volunteers or event/practice sign up/scheduling services. After testing out several services, I used a free online third-party recruitment sign-up tool for volunteers and adapted it for our purpose. The tool saved us from the time-consuming activities of fitting respondents preferred schedules into different time slots (which we did in recruiting Kids Wearable focus group).

The use of a large number of Wi-Fi tablets or phablets was found to impact the Wi-Fi network capacity. We found that our internal Wi-Fi network can only support up to less than half of the official number (around 27 or 28) without significant performance degradation. Through the different challenges, we learned valuable logistic lessons of handling such situations and solved the problem by providing backup mobile hotspots and having STA employees to use their laptop and wired connection to complete the Apps Settings/Settings questionnaire. Since many of the problems have been anticipated and thought through, we completed the data collection and execution of the research without compromising the validity of the results.

Impact: The scheduling and resource utilization challenge of a large scale user research enabled us to anticipate and test different solutions to handle many difficult situational problems in the planning and execution of a large scale research. We will provide feedback to our IT department so that they can address those Wi-Fi capacity issues more effectively.

Evaluator Comments :

Sang did a great job on conducting huge amount of ad hoc consumer researches from HQ with limited resource and budget. Great job!

SPEED

1.0

Employee Comments :

The unpredictability and urgency of both research requests from HQ and STA have driven me to develop a well-oiled "Just-in-Time" approach in handling multiple urgent research requests in the context of existing research pipeline. This "Just-in-Time" approach involves logistic adjustment, buffer in recruiting participants and inclusion of research topics that can be swapped in and out flexibly at the very last moment of the research. It also maximizes the use of recruited subjects without wasting any resources for the research.

Example/Impact:

When I conducted internal employee/friends and family usability research of Apps Settings and Settings requested by HQ Design Team, I integrated the request from HQ Product Planning on the comparative phablet size research of ZTE ZMAX and Samsung Mega 2 in our research design and protocol without and delivered the quick results of grip, portability, pocketability and legibility back to the team the same day upon completion of data collection. (Nov 2014)

Most of the internal employee research conducted (see the list of accomplishments below) were completed within 3 days after the research requests (in many of the cases same day as requested). I put in extra hours to recruit and run research to ensure a quick turnaround time to meet HQ timeline without sacrificing the quality and validity of research. More than 50 different internal employee research projects have been completed in this manner this year. (Jan – Nov 2014)

Evaluator Comments :

When it comes to getting things done by when I need, I would rely on Sang the most. His commitment to speed is enormous!

08528812

APPRAISAL : APPRAISAL ACKNOWLEDGEMENT

STRATEGIC FOCUS Employee Comments : With the direction from our team and input from other teams (STA Product Planning, Product Management, Consumer Insights, User Trial Lab., HQ R&D, Design Group, Product Planning, New Business etc.), I planned, executed, delivered both consumer and internal employee/friends and family user research to support and enhance the product and service strategy and product/user experience design of Project Zero, Galaxy S5, Galaxy Note 4, Note Edge Family, Gear Family products and Galaxy Tablets. I planned research based on the research requests from these organizations as well as our anticipation and assessments of research needs. Example/Impact: Examples: Galaxy Flagship device Settings (Jan 2014, Nov 2014), Galaxy S5 product experience (May 2014), Competitive wearable UX consumer evaluation and Gear 2 family consumer user trial evaluation (June – July 2014) and numerous research for HQ and STA (see list of accomplishments) Results from the research have been used extensively by our team and HQ in supporting proposed improvements and recommendations of product experience. Worked closely with our internal team and other cross-functional teams and provided product experience primary research of our strategic products (Galaxy S5, Galaxy Note 4, Gear Family, Galaxy Tab S) and Samsung services (S Health, Project V,) for UX improvements, feature suggestions, design recommendations for next generation products/services. Specific impacts of various projects were described throughout this document. Note: most of the output can be found in T:\Product Realization\Product Planning\Experience Planning UX Research Evaluator Comments : Sang is very much strategic focused, and he knows what project would be impactful and important for our products based on his experience and communicating with me.	2.0
---	----------------

08528812

APPRAISAL : APPRAISAL ACKNOWLEDGEMENT

Page 6 of 15

SIMPLICITY Employee Comments : Focused on the simplicity and discoverability of key features/functions of core apps for Galaxy S5 (K), Gear 2 wearable family and Galaxy Note 4 (T) by providing continual heuristic evaluation of UX of the prototypes as well as consumer and internal employee/friends and family UX research. Results and Impact: The actionable recommendations are clearly traceable with heuristic usability we performed before the product launch. 52 usability heuristic evaluations were completed between Jan and Sept 2014 including GS5, Gear 2, Gear Fit, competitive wearable UX evaluations and specific Samsung services (S Voice, camera, S Health, Fingerprint scanner etc.) Evaluator Comments : Consumer research that we conduct contains a lot of variables and need to consider a lot of things. Sang is an expert that I can rely on to simplify this.	3.0
SELF-CONTROL / EMPOWERMENT Employee Comments : Took initiative to plan, scope and execute important product experience research of Galaxy flagship products and services, features, core apps and wearables with professional research practices and methodology with emphasis on data integrity and scientific discipline. Example: I conducted product research (internal employees, friends and family and external consumers (a total of 53 completed projects as of Nov 7) with well-defined protocol and kept paper/electronic records, followed research protocol and conducting statistical analysis/interpretations (if quantitative results were needed), putting in extra effort and hours so that the data and the results were valid and traceable. I used written questions and responses (paper and/or electronic) from participants even with simple survey and identified research instances where skewed or misleading results may occur because of sample bias, e.g., using internal employee or friends/family to extrapolate to US smartphone users. Evaluator Comments : I provided Sang with full empowerment when it comes to conducting researches. He is very passionate and he knows what he is doing.	2.0

Page 7 of 15

CUSTOMER FOCUS

2.0

Employee Comments :

External Customer Focus

The consumer research done focused on the needs and user behavior as well as user performance of our devices/services by our ultimate customers (consumers from different walks of life with different demographics). Based on the results from consumer UX research on the discovery, usability and usefulness of the key features and Samsung products and services, the team would propose recommended changes in the UX.

Impact:

I have been advocating UX design improvements based on various consumer research results (Settings, Wearables, GS5 Core apps, S Health/Wearables consumer trial etc.) in addition to the internal employee and friends and family UX survey, evaluations and suggestions. User behavior can be very different between our internal teams, friends and family and external consumers.

Internal Customer Focus

I collaborated closely with our team members as well as HQ teams to define the scope and research questions of consumer UX research and continue to follow up with the team on suggestions of additional uses of data, for both STA or HQ requests. Examples: the scope and questions of competitive Wearable and S Health research with Silvia, Chris, Soon Won (April through June 2014), Voice assistant and Voice Input online survey with Soon Won, Tejas and in person UX research with the team (on going), Device Help Online Survey with Minjoo (Oct 2014), T Benefits and Positioning Research with Drew, Shoneel (July 2014)

Impact:

I provided actual consumer usage, behavior, pain points through in-depth qualitative and quantitative research so that the team can make use of the data and identify and recommend design solutions to address consumer pain points. Among those identified with recommendations included solutions to reduce camera settings complexities drastically based on GS5 consumer research, improved product experience in Gear Fit (addition of vertical orientation), S Health, Settings and numerous features from research findings as requested by HQ.

Evaluator Comments :

Sang acknowledges that his customers are end-users. He designs and conducts research based on purely from an end-user's perspective. This is the success factor of his research outcome.

CONTINUOUS INNOVATION

2.0

Employee Comments :

I continually sought to improve and advance research tools and methodology to enhance effectiveness, efficiency and field validity of the results and actively sought for critique, feedback and advances in research and testing methodology, protocols, data analysis and research reports for project done, improving the quality and rigor of the entire research process. This was done both internally with User Trial team for reciprocal feedback and with our vendors to test out improved methodology and protocol.

Examples:

1) The use of tablets and online research tool to automate collection of massive data points in product/user research (e.g., manual entry of comparative selfie image quality with 70 participants and 25,550 data points, apps settings and settings research required about 18 man-hours; tablets were used to automate collection in Settings/App Settings research with 88 participants and 33,176 data points completed almost real time) even with Wi-Fi coverage and load issues.

2) I have spent time and effort to extend a research approach I pioneered 4 years ago to handle competitive product evaluation by rotating and counterbalancing users into different experimental conditions. To prevent respondent boredom and fatigue in traditional research protocol and environment and the constraints of limited material or devices, I have tried to maximize effectiveness and efficiency by running research covering different topics in the same session. This approach was adopted in most of the primary consumer research we undertook. I have used this approach successfully in the primary research with both internal employees (e.g., Apps Settings/Settings and ZTE ZMAX/Samsung Mega 2 evaluation, Nov 2014) or external consumers (e.g., Competitive wearable product experience research, May 2014)

3) We also make use of any "backup" respondents in consumer research to conduct additional research to maximize the value of our research (typical way research industry handled "backup" respondents is to pay them and ask them to leave if the quota of the research session is filled).

Impact: I simplified data collection and entry process by removing manual entry in large-scale user/product research and reduced effort by almost 100 with better data accuracy. The parallel research approach with rotating research topics and the use of 'backup' respondents enable STA to save money and increase productivity in research. Direct and active involvement from planning, execution and analysis of research enables us to sharpen our research skills and improve the effectively and efficiency of the process

Evaluator Comments :

Sang is open to new tools to get better research data. He created a very good use case and great path to new research tools which was very successful this year.

TEAMWORK

2.0

Employee Comments :

I collaborated within STA team members as well as cross-functional and division organizations including STA Consumer Insight, STA User Trial team, and various HQ teams on both internal employee, friends/family and consumer research planning, execution and actionable recommendations. Follow-up with cross-functional recommendations, suggestions and input from the consumer or internal STA employee product experience research results. Provided and shared user research information with both internal and cross-functional teams.

Examples:

1) Close collaboration within our STA team members, Concept Creation, User Trial and HQ New Business teams on the Kids Wearable Focus Groups and UX evaluation on the planning, execution and analysis/report of results. The resulting process, protocol and method is now used to carry out similar research by the HQ New Business team in other regions (Sept 2014)

2. Close collaboration within team on the scope, methodology and detailed questions on GS5 core apps & camera research (May 2014), Gear 2 family wearable research (June 2014), S- Health Usage research (July 2014, Oct 2014), Voice Input UX research (ongoing)

3. Close collaboration with STA Product Planning team on various friends and family and consumer user research and Consumer online research including microSD card usage (Oct 2014), T Features/Benefits/Positioning (Aug 2014), Duplicate Apps (Jul 2014).

4. Ad hoc data analysis/interpretation, research result compilation for team members from past primary research inside and outside the group (e.g., GS4 and GS5, S Health, Camera, voice assistant, Gear 2 family, Gear VR, Blink Shot, 50 Top apps usage with data from Mobile Insight,) (ongoing)

Evaluator Comments :

Great team player! Supports multi-team, not only my team but also most of other teams within Product Strategy & Marketing. Often educates people how to conduct simple consumer researches.

APPRAISAL : APPRAISAL ACKNOWLEDGEMENT

Page 11 of 15

LEADERSHIP

2.0

Employee Comments :

Took initiative to provide training/consultation to internal team members as well as managers and engineers from other departments (e.g., Product Management and User Trial) on user/product research process, protocols and tools. Promoted general skills in research planning and execution for people inside and outside of group. Increased STA employees understanding and awareness of the importance of user/product research.

Example:

1. Provided training and direction of universal and accessibility research to Product Management and Compliance team. (Sep 2014).
2. Provided hands-on training for members from HQ New Business and Design Team to conduct/moderate usability evaluation in Kids Wearable research requested by HQ (Sep 2014).
3. Provided hands-on training/consultation to Tejas on designing Voice input survey and using Qualtrics Online survey platform to create Survey (Nov 2014)
4. Provided hands-on training/consultation to John Jun from Product Management in designing, conducting and analyzing/interpreting Note 4 Product Management Launch process online survey (Nov 2014).
5. Provided hands-on training of our product features and our competitive product advantages to more than 200 STA employees with their participation in extended product/user research sessions (2 hours or more). Examples included Apps Settings and Settings UX research (Nov 2014), Competitive selfie picture quality evaluation (Sep 2014).

Impact: Enhanced the general understanding, skill set and knowledge/practice in user/product research among STA and HQ employees (Ongoing, 2014)

Evaluator Comments :

Sang had to lead MQL UT team often to make large scale consumer researches (+700 participants). Also, he would lead Strategy Analytics for any FGI that we conduct. Great leadership.

ACCOMPLISHMENTS & GOALS (Comments Optional)

ACCOMPLISHMENTS

Employee Comments :

Completed the planning, design, execution, analysis and interpretations of the following:

A. Consumer User/Product Research

- Galaxy Smartphone Settings Estimated Usage Frequency Consumer UX Research (N=58) Jan 2014
- Galaxy Flagship Settings Consumer UX Research (N=127) Feb 2014
- Wearable Consumer Market Online Survey (N=3076) Apr 2014
- SmartPhone Core Apps: Phone, Contacts, Messaging, Email Consumer Usage and Behavior (N=67) May 2014
- Smartphone Battery Accessories: Consumer Solution to extend Battery Life (N=43) May 2014
- Premium Smartphone Design: Consumer Perception (N=66) May 2014
- GS5 and SmartPhone Core Apps UX Research: FingerPrint, Camera, Phone, Contacts, Messaging, Email, Calendar, Heart Rate Monitor, and Browser - Consumer Usage, Behavior (N=68) May 2014
- GS5 Consumer Trial 3-month usage report (N=44) Sep 2014
- Gear 3 Consumer Purchase Preference (N=37) Jun 2014
- Smartband and smartwatch OOB and UX: Consumer Competitive product evaluation (N=117) Jun 2014
- Gear 2 Family Product Experience: Consumer 2-week Trial and Focus Groups Feedback (N=37) Jul 2014
- FingerPrint Unlock UX and Performance Consumer Research (N=126) Jun 2014
- STA Easy Mode vs. Super Simple Mode Consumer Online Survey (N=145) Sep 2014
- Device Help Consumer Usage Online Survey (N=298) Oct 2014
- microSD card consumer usage (N=315) Oct 2014

B. Internal Employee / Friends/Family User Research

- Downloads and My Apps File Usage STA Internal Employees (N=50)
- Note 3 vs. Note 3 MR Key Mapping STA Internal Employees (N=40)
- FingerPrint Animation Guidance Preference STA Internal Employees (N=57)
- Incoming Call Notification Preference STA Internal Employees (N=51)
- Gear Fit HomeScreen Display Orientation STA Internal Employees (N=50)
- Gear Fit Portrait App display orientation STA Internal Employees (N=58)
- Gear 2 WingTip Homelayer STA Internal Employees (N=20)
- Gear Fit Font Size & Word Wrap STA Internal Employees (N=50)
- S Health Training Effect STA Internal Employees (N=54)
- Headphones User Preference: Product Planning and Experience Team members (N=8)
- FingerPrint Registration UX Research STA Internal Employees (N=33)
- Quick Connect & Share via UX Research: STA Internal Employees (N=27)
- Flat and 3D keyboard Comparison: STA Internal Employees (N=19)
- FingerPrint Usability Research: STA Internal Employees (N=16)
- Unknown/Blocked Calls User Response, Font Size of Gear 2: STA Internal Employees (N=30)
- Selfie Picture Gesture UX: STA Internal Employees (N=59)
- Gear 3 Conversation View UX: STA Internal Employees Gear 2 Users (N=24)
- New Core Apps UX Evaluation: STA internal employees (N=48)
- Duplicated Preloaded Apps UX: STA Internal Employees (N=510)
- T New Features UX Evaluation: STA Internal Employees (N=33)
- Lock Screen Usage Research: Friends and Family Only (N=480)
- Lock Screen UX & Preference Research: STA internal employees and friends and family (N=351)
- Skin_Colors Selection UX (UV feature: S Health): STA Internal Employees (N=51)

ZTE ZMAX and Samsung Mega 2 grip, portability, pocketability, legibility comparison: friends and family + internal employees (N=64)
Voice Input Project V research: friends and family + internal employees (N=32)

Evaluator Comments :

Sang conducted over 80 researches this year which was a great rationale and justification of Product Experience / Product Marketing's ask/request to HQ. Without his researches, we wouldn't have been successful this year.

AREAS OF DEVELOPMENT

Employee Comments :

Continue to improve the effectiveness and efficiency of user/product research process.

1. Continue to simplify complex research insights/results and design engaging presentation for effective executive consumption.
2. Continue to work within the team to further focus research activities on their needs.
3. Develop detailed recommendations and measurable criteria of product improvements based on consumer product experience research and business needs.
4. Advocate consumer experience from user/product research as basis for innovative, strategic, socially responsible and differentiable features development.
5. Continue to mentor, train and develop awareness, skills and knowledge of product/user research in the team as well as Samsung employees outside the team.

Evaluator Comments :

Sang is a great expert in research, but the only area he has to improve is making the research results a little simpler for anybody can understand. I am seeing him trying hard though.

APPRAISAL : APPRAISAL ACKNOWLEDGEMENT

FUTURE GOALS

Employee Comments :

1. Become a world-class user and product research expert with both top-notch quantitative and qualitative skills.
2. Continue to enhance research methodology and analysis framework and provide valid and insightful results for the company to innovate and improve our products and services to be #1 in the marketplace
3. Advocate professional integrity and ethics as a researcher and scientist
4. Train and mentor team and employees on the basic understanding and importance of product experience.

Evaluator Comments :

Based on the quantity and quality of work he is performing with Samsung, he will achieve world class user and product research expert in the near future.

SAMSUNG
